Site Ownership

[Provide this information for each applicable site]

Exact Legal Name of Site Owner: Clark Street Development LLC
Address of Site Owner: 980 N. Michigan Avenue, Suite 1280, Chicago, Illinois 60611
Street Address or Legal Description of Site: 2816 N. Kimball Avenue, Chicago, IL 60618
Proof of ownership or control of the site is to be provided as Attachment 2. Examples of proof of ownership are property tax statement, tax assessor's documentation, deed, notarized statement of the corporation attesting to ownership, an option to lease, a letter of intent to lease or a lease.
APPEND DOCUMENTATION AS ATTACHMENT-2, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Operating Identity/Licensee

[Provide this information for each applicable facility, and insert after this page.]

Exact Legal Name: Total Renal Care, Inc.
Address: 1551 Wewatta Street, Denver, CO 80202
<input type="checkbox"/> Non-profit Corporation <input type="checkbox"/> Partnership <input checked="" type="checkbox"/> For-profit Corporation <input type="checkbox"/> Governmental <input type="checkbox"/> Limited Liability Company <input type="checkbox"/> Sole Proprietorship <input type="checkbox"/> Other
<ul style="list-style-type: none"> o Corporations and limited liability companies must provide an Illinois Certificate of Good Standing. o Partnerships must provide the name of the state in which organized and the name and address of each partner specifying whether each is a general or limited partner. o Persons with 5 percent or greater interest in the licensee must be identified with the % of ownership.
APPEND DOCUMENTATION AS ATTACHMENT-3, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Organizational Relationships

Provide (for each co-applicant) an organizational chart containing the name and relationship of any person or entity who is related (as defined in Part 1130.140). If the related person or entity is participating in the development or funding of the project, describe the interest and the amount and type of any financial contribution.

APPEND DOCUMENTATION AS ATTACHMENT-4, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

3

Flood Plain Requirements

[Refer to application instructions.]

Provide documentation that the project complies with the requirements of Illinois Executive Order #2005-5 pertaining to construction activities in special flood hazard areas. As part of the flood plain requirements please provide a map of the proposed project location showing any identified floodplain areas. Floodplain maps can be printed at www.FEMA.gov or www.illinoisfloodmaps.org. **This map must be in a readable format.** In addition please provide a statement attesting that the project complies with the requirements of Illinois Executive Order #2005-5 (<http://www.hfsrb.illinois.gov>).

APPEND DOCUMENTATION AS **ATTACHMENT -5**, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Historic Resources Preservation Act Requirements

[Refer to application instructions.]

Provide documentation regarding compliance with the requirements of the Historic Resources Preservation Act.

APPEND DOCUMENTATION AS **ATTACHMENT-6**, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

DESCRIPTION OF PROJECT**1. Project Classification**

[Check those applicable - refer to Part 1110.40 and Part 1120.20(b)]

Part 1110 Classification:

- Substantive
 Non-substantive

Part 1120 Applicability or Classification:
[Check one only.]

- Part 1120 Not Applicable
 Category A Project
 Category B Project
 DHS or DVA Project

4

2. Narrative Description

Provide in the space below, a brief narrative description of the project. Explain **WHAT** is to be done in **State Board defined terms, NOT WHY** it is being done. If the project site does NOT have a street address, include a legal description of the site. Include the rationale regarding the project's classification as substantive or non-substantive.

DaVita Inc. and Total Renal Care, Inc. (the "Applicants") seek authority from the Illinois Health Facilities and Services Review Board (the "Board") to discontinue its existing 20-station dialysis facility located at 2659 North Milwaukee Avenue, Chicago, Illinois 60647 and to establish a 28-station dialysis facility at 2816 N. Kimball Avenue, Chicago, Illinois (the "Replacement Facility"). The proposed dialysis facility will include approximately 9,100 gross square feet.

While it is a replacement facility in nature, this project has been classified as substantive because it involves the establishment of a health care facility.

5

Project Costs and Sources of Funds

Complete the following table listing all costs (refer to Part 1120.110) associated with the project. When a project or any component of a project is to be accomplished by lease, donation, gift, or other means, the fair market or dollar value (refer to Part 1130.140) of the component must be included in the estimated project cost. If the project contains non-reviewable components that are not related to the provision of health care, complete the second column of the table below. Note, the use and sources of funds must equal.

Project Costs and Sources of Funds			
USE OF FUNDS	CLINICAL	NONCLINICAL	TOTAL
Preplanning Costs			
Site Survey and Soil Investigation			
Site Preparation			
Off Site Work			
New Construction Contracts	\$1,537,000		\$1,537,000
Modernization Contracts			
Contingencies	\$153,700		\$153,700
Architectural/Engineering Fees	\$85,500		\$85,500
Consulting and Other Fees	\$97,000		\$97,000
Movable or Other Equipment (not in construction contracts)	\$748,012		\$748,012
Bond Issuance Expense (project related)			
Net Interest Expense During Construction (project related)			
Fair Market Value of Leased Space or Equipment	\$2,160,327		\$2,160,327
Other Costs To Be Capitalized			
Acquisition of Building or Other Property (excluding land)			
TOTAL USES OF FUNDS	\$4,781,539		\$4,781,539
SOURCE OF FUNDS	CLINICAL	NONCLINICAL	TOTAL
Cash and Securities	\$2,621,212		\$2,621,212
Pledges			
Gifts and Bequests			
Bond Issues (project related)			
Mortgages			
Leases (fair market value)	\$2,160,327		\$2,160,327
Governmental Appropriations			
Grants			
Other Funds and Sources			
TOTAL SOURCES OF FUNDS	\$4,781,539		\$4,781,539
NOTE: ITEMIZATION OF EACH LINE ITEM MUST BE PROVIDED AT ATTACHMENT-7, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.			

Related Project Costs

Provide the following information, as applicable, with respect to any land related to the project that will be or has been acquired during the last two calendar years:

Land acquisition is related to project Yes No
 Purchase Price: \$ _____
 Fair Market Value: \$ _____

The project involves the establishment of a new facility or a new category of service
 Yes No

If yes, provide the dollar amount of all **non-capitalized** operating start-up costs (including operating deficits) through the first full fiscal year when the project achieves or exceeds the target utilization specified in Part 1100.

Estimated start-up costs and operating deficit cost is \$0 _____.

Project Status and Completion Schedules

Indicate the stage of the project's architectural drawings:

None or not applicable Preliminary
 Schematics Final Working

Anticipated project completion date (refer to Part 1130.140): December 31, 2013

Indicate the following with respect to project expenditures or to obligation (refer to Part 1130.140):

Purchase orders, leases or contracts pertaining to the project have been executed.
 Project obligation is contingent upon permit issuance. Provide a copy of the contingent "certification of obligation" document, highlighting any language related to CON Contingencies
 Project obligation will occur after permit issuance.

APPEND DOCUMENTATION AS ATTACHMENT-8, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

State Agency Submittals

Are the following submittals up to date as applicable:

Cancer Registry **NOT APPLICABLE**
 APORS **NOT APPLICABLE**
 All formal document requests such as IDPH Questionnaires and Annual Bed Reports been submitted
 All reports regarding outstanding permits
Failure to be up to date with these requirements will result in the application for permit being deemed incomplete.

7

Cost Space Requirements

Provide in the following format, the department/area **DGSF** or the building/area **BGSF** and cost. The type of gross square footage either **DGSF** or **BGSF** must be identified. The sum of the department costs **MUST** equal the total estimated project costs. Indicate if any space is being reallocated for a different purpose. Include outside wall measurements plus the department's or area's portion of the surrounding circulation space. **Explain the use of any vacated space.**

Dept. / Area	Cost	Gross Square Feet		Amount of Proposed Total Gross Square Feet That Is:			
		Existing	Proposed	New Const.	Modernized	As Is	Vacated Space
REVIEWABLE							
Medical Surgical							
Intensive Care							
Diagnostic Radiology							
MRI							
Total Clinical							
NON REVIEWABLE							
Administrative							
Parking							
Gift Shop							
Total Non-clinical							
TOTAL							

APPEND DOCUMENTATION AS ATTACHMENT-9, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Facility Bed Capacity and Utilization

Complete the following chart, as applicable. Complete a separate chart for each facility that is a part of the project and insert following this page. Provide the existing bed capacity and utilization data for the latest **Calendar Year for which the data are available**. **Include observation days in the patient day totals for each bed service**. Any bed capacity discrepancy from the Inventory will result in the application being deemed **incomplete**.

FACILITY NAME:		CITY:			
REPORTING PERIOD DATES:		From:	to:		
Category of Service	Authorized Beds	Admissions	Patient Days	Bed Changes	Proposed Beds
Medical/Surgical					
Obstetrics					
Pediatrics					
Intensive Care					
Comprehensive Physical Rehabilitation					
Acute/Chronic Mental Illness					
Neonatal Intensive Care

CERTIFICATION

The application must be signed by the authorized representative(s) of the applicant entity. The authorized representative(s) are:

- o in the case of a corporation, any two of its officers or members of its Board of Directors;
- o in the case of a limited liability company, any two of its managers or members (or the sole manager or member when two or more managers or members do not exist);
- o in the case of a partnership, two of its general partners (or the sole general partner, when two or more general partners do not exist);
- o in the case of estates and trusts, two of its beneficiaries (or the sole beneficiary when two or more beneficiaries do not exist); and
- o in the case of a sole proprietor, the individual that is the proprietor.

This Application for Permit is filed on the behalf of DaVita Inc. *
 in accordance with the requirements and procedures of the Illinois Health Facilities Planning Act. The undersigned certifies that he or she has the authority to execute and file this application for permit on behalf of the applicant entity. The undersigned further certifies that the data and information provided herein, and appended hereto, are complete and correct to the best of his or her knowledge and belief. The undersigned also certifies that the permit application fee required for this application is sent herewith or will be paid upon request.

SECTION II. DISCONTINUATION

This Section is applicable to any project that involves discontinuation of a health care facility or a category of service. **NOTE:** If the project is solely for discontinuation and if there is no project cost, the remaining Sections of the application are not applicable.

Criterion 1110.130 - Discontinuation

READ THE REVIEW CRITERION and provide the following information:

GENERAL INFORMATION REQUIREMENTS

1. Identify the categories of service and the number of beds, if any that is to be discontinued.
2. Identify all of the other clinical services that are to be discontinued.
3. Provide the anticipated date of discontinuation for each identified service or for the entire facility.
4. Provide the anticipated use of the physical plant and equipment after the discontinuation occurs.
5. Provide the anticipated disposition and location of all medical records pertaining to the services being discontinued, and the length of time the records will be maintained.
6. For applications involving the discontinuation of an entire facility, certification by an authorized representative that all questionnaires and data required by HFSRB or DPH (e.g., annual questionnaires, capital expenditures surveys, etc.) will be provided through the date of discontinuation, and that the required information will be submitted no later than 60 days following the date of discontinuation.

REASONS FOR DISCONTINUATION

The applicant shall state the reasons for discontinuation and provide data that verifies the need for the proposed action. See criterion 1110.130(b) for examples.

IMPACT ON ACCESS

1. Document that the discontinuation of each service or of the entire facility will not have an adverse effect upon access to care for residents of the facility's market area.
2. Document that a written request for an impact statement was received by all existing or approved health care facilities (that provide the same services as those being discontinued) located within 45 minutes travel time of the applicant facility.
3. Provide copies of impact statements received from other resources or health care facilities located within 45 minutes travel time, that indicate the extent to which the applicant's workload will be absorbed without conditions, limitations or discrimination.

APPEND DOCUMENTATION AS ATTACHMENT-10, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

12

SECTION III – BACKGROUND, PURPOSE OF THE PROJECT, AND ALTERNATIVES - INFORMATION REQUIREMENTS

This Section is applicable to all projects except those that are solely for discontinuation with no project costs.

Criterion 1110.230 – Background, Purpose of the Project, and Alternatives

READ THE REVIEW CRITERION and provide the following required information:

BACKGROUND OF APPLICANT

1. A listing of all health care facilities owned or operated by the applicant, including licensing, and certification if applicable.
2. A certified listing of any adverse action taken against any facility owned and/or operated by the applicant during the three years prior to the filing of the application.
3. Authorization permitting HFSRB and DPH access to any documents necessary to verify the information submitted, including, but not limited to: official records of DPH or other State agencies; the licensing or certification records of other states, when applicable; and the records of nationally recognized accreditation organizations. **Failure to provide such authorization shall constitute an abandonment or withdrawal of the application without any further action by HFSRB.**
4. If, during a given calendar year, an applicant submits more than one application for permit, the documentation provided with the prior applications may be utilized to fulfill the information requirements of this criterion. In such instances, the applicant shall attest the information has been previously provided, cite the project number of the prior application, and certify that no changes have occurred regarding the information that has been previously provided. The applicant is able to submit amendments to previously submitted information, as needed, to update and/or clarify data.

APPEND DOCUMENTATION AS ATTACHMENT-11, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM. EACH ITEM (1-4) MUST BE IDENTIFIED IN ATTACHMENT 11.

PURPOSE OF PROJECT

1. Document that the project will provide health services that improve the health care or well-being of the market area population to be served.
2. Define the planning area or market area, or other, per the applicant's definition.
3. Identify the existing problems or issues that need to be addressed, as applicable and appropriate for the project. [See 1110.230(b) for examples of documentation.]
4. Cite the sources of the information provided as documentation.
5. Detail how the project will address or improve the previously referenced issues, as well as the population's health status and well-being.
6. Provide goals with quantified and measurable objectives, with specific timeframes that relate to achieving the stated goals **as appropriate**.

For projects involving modernization, describe the conditions being upgraded if any. For facility projects, include statements of age and condition and regulatory citations if any. For equipment being replaced, include repair and maintenance records.

NOTE: Information regarding the "Purpose of the Project" will be included in the State Agency Report.

APPEND DOCUMENTATION AS ATTACHMENT-12, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM. EACH ITEM (1-6) MUST BE IDENTIFIED IN ATTACHMENT 12.

ALTERNATIVES

- 1) Identify ALL of the alternatives to the proposed project:

Alternative options must include:

- A) Proposing a project of greater or lesser scope and cost;
 - B) Pursuing a joint venture or similar arrangement with one or more providers or entities to meet all or a portion of the project's intended purposes; developing alternative settings to meet all or a portion of the project's intended purposes;
 - C) Utilizing other health care resources that are available to serve all or a portion of the population proposed to be served by the project; and
 - D) Provide the reasons why the chosen alternative was selected.
- 2) Documentation shall consist of a comparison of the project to alternative options. The comparison shall address issues of total costs, patient access, quality and financial benefits in both the short term (within one to three years after project completion) and long term. This may vary by project or situation. **FOR EVERY ALTERNATIVE IDENTIFIED THE TOTAL PROJECT COST AND THE REASONS WHY THE ALTERNATIVE WAS REJECTED MUST BE PROVIDED.**
- 3) The applicant shall provide empirical evidence, including quantified outcome data that verifies improved quality of care, as available.

APPEND DOCUMENTATION AS ATTACHMENT-13, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

SECTION IV - PROJECT SCOPE, UTILIZATION, AND UNFINISHED/SHELL SPACE

Criterion 1110.234 - Project Scope, Utilization, and Unfinished/Shell Space

READ THE REVIEW CRITERION and provide the following information:

SIZE OF PROJECT:

1. Document that the amount of physical space proposed for the proposed project is necessary and not excessive. **This must be a narrative.**
2. If the gross square footage exceeds the BGSF/DGSF standards in Appendix B, justify the discrepancy by documenting one of the following:
 - a. Additional space is needed due to the scope of services provided, justified by clinical or operational needs, as supported by published data or studies;
 - b. The existing facility's physical configuration has constraints or impediments and requires an architectural design that results in a size exceeding the standards of Appendix B;
 - c. The project involves the conversion of existing space that results in excess square footage.

Provide a narrative for any discrepancies from the State Standard. A table must be provided in the following format with Attachment 14.

SIZE OF PROJECT				
DEPARTMENT/SERVICE	PROPOSED BGSF/DGSF	STATE STANDARD	DIFFERENCE	MET STANDARD?

APPEND DOCUMENTATION AS ATTACHMENT-14, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

PROJECT SERVICES UTILIZATION:

This criterion is applicable only to projects or portions of projects that involve services, functions or equipment for which HFSRB has established utilization standards or occupancy targets in 77 Ill. Adm. Code 1100.

Document that in the second year of operation, the annual utilization of the service or equipment shall meet or exceed the utilization standards specified in 1110.Appendix B. **A narrative of the rationale that supports the projections must be provided.**

A table must be provided in the following format with Attachment 15.

UTILIZATION					
	DEPT / SERVICE	HISTORICAL UTILIZATION (PATIENT DAYS) (TREATMENTS) ETC.	PROJECTED UTILIZATION	STATE STANDARD	MET STANDARD?
YEAR 1					
YEAR 2					

APPEND DOCUMENTATION AS ATTACHMENT-15, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

15

UNFINISHED OR SHELL SPACE:

Provide the following information:

1. Total gross square footage of the proposed shell space;
2. The anticipated use of the shell space, specifying the proposed GSF to be allocated to each department, area or function;
3. Evidence that the shell space is being constructed due to
 - a. Requirements of governmental or certification agencies; or
 - b. Experienced increases in the historical occupancy or utilization of those areas proposed to occupy the shell space.
4. Provide:
 - a. Historical utilization for the area for the latest five-year period for which data are available; and
 - b. Based upon the average annual percentage increase for that period, projections of future utilization of the area through the anticipated date when the shell space will be placed into operation.

APPEND DOCUMENTATION AS ATTACHMENT-16, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

ASSURANCES:

Submit the following:

1. Verification that the applicant will submit to HFSRB a CON application to develop and utilize the shell space, regardless of the capital thresholds in effect at the time or the categories of service involved.
2. The estimated date by which the subsequent CON application (to develop and utilize the subject shell space) will be submitted; and
3. The anticipated date when the shell space will be completed and placed into operation.

APPEND DOCUMENTATION AS ATTACHMENT-17, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

14

G. Criterion 1110.1430 - In-Center Hemodialysis

1. Applicants proposing to establish, expand and/or modernize In-Center Hemodialysis must submit the following information:
2. Indicate station capacity changes by Service: Indicate # of stations changed by action(s):

Category of Service	# Existing Stations	# Proposed Stations
<input checked="" type="checkbox"/> In-Center Hemodialysis	20	28

3. READ the applicable review criteria outlined below and **submit the required documentation for the criteria:**

APPLICABLE REVIEW CRITERIA	Establish	Expand	Modernize
1110.1430(b)(1) - Planning Area Need - 77 Ill. Adm. Code 1100 (formula calculation)	X		
1110.1430(b)(2) - Planning Area Need - Service to Planning Area Residents	X	X	
1110.1430(b)(3) - Planning Area Need - Service Demand - Establishment of Category of Service	X		
1110.1430(b)(4) - Planning Area Need - Service Demand - Expansion of Existing Category of Service		X	
1110.1430(b)(5) - Planning Area Need - Service Accessibility	X		
1110.1430(c)(1) - Unnecessary Duplication of Services	X		
1110.1430(c)(2) - Maldistribution	X		
1110.1430(c)(3) - Impact of Project on Other Area Providers	X		
1110.1430(d)(1) - Deteriorated Facilities			X
1110.1430(d)(2) - Documentation			X
1110.1430(d)(3) - Documentation Related to Cited Problems			X
1110.1430(e) - Staffing Availability	X	X	
1110.1430(f) - Support Services	X	X	X
1110.1430(g) - Minimum Number of Stations	X		
1110.1430(h) - Continuity of Care	X		
1110.1430(j) - Assurances	X	X	X
APPEND DOCUMENTATION AS ATTACHMENT-26, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.			

4. Projects for relocation of a facility from one location in a planning area to another in the same planning area must address the requirements listed in subsection (a)(1) for the "Establishment of Services or Facilities", as well as the requirements in Section 1110.130 - "Discontinuation" and subsection 1110.1430(i) - "Relocation of Facilities".

17

The following Sections **DO NOT** need to be addressed by the applicants or co-applicants responsible for funding or guaranteeing the funding of the project if the applicant has a bond rating of A- or better from Fitch's or Standard and Poor's rating agencies, or A3 or better from Moody's (the rating shall be affirmed within the latest 18 month period prior to the submittal of the application):

- Section 1120.120 Availability of Funds – Review Criteria
- Section 1120.130 Financial Viability – Review Criteria
- Section 1120.140 Economic Feasibility – Review Criteria, subsection (a)

VIII. - 1120.120 - Availability of Funds

The applicant shall document that financial resources shall be available and be equal to or exceed the estimated total project cost plus any related project costs by providing evidence of sufficient financial resources from the following sources, as applicable: **Indicate the dollar amount to be provided from the following sources:**

\$2,621,212	a)	Cash and Securities – statements (e.g., audited financial statements, letters from financial institutions, board resolutions) as to:
	1)	the amount of cash and securities available for the project, including the identification of any security, its value and availability of such funds; and
	2)	interest to be earned on depreciation account funds or to be earned on any asset from the date of applicant's submission through project completion;
_____	b)	Pledges – for anticipated pledges, a summary of the anticipated pledges showing anticipated receipts and discounted value, estimated time table of gross receipts and related fundraising expenses, and a discussion of past fundraising experience.
_____	c)	Gifts and Bequests – verification of the dollar amount, identification of any conditions of use, and the estimated time table of receipts;
\$2,160,327 (Lease FMV)	d)	Debt – a statement of the estimated terms and conditions (including the debt time period, variable or permanent interest rates over the debt time period, and the anticipated repayment schedule) for any interim and for the permanent financing proposed to fund the project, including:
	1)	For general obligation bonds, proof of passage of the required referendum or evidence that the governmental unit has the authority to issue the bonds and evidence of the dollar amount of the issue, including any discounting anticipated;
	2)	For revenue bonds, proof of the feasibility of securing the specified amount and interest rate;
	3)	For mortgages, a letter from the prospective lender attesting to the expectation of making the loan in the amount and time indicated, including the anticipated interest rate and any conditions associated with the mortgage, such as, but not limited to, adjustable interest rates, balloon payments, etc.;
	4)	For any lease, a copy of the lease, including all the terms and conditions, including any purchase options, any capital improvements to the property and provision of capital equipment;
	5)	For any option to lease, a copy of the option, including all terms and conditions.
_____	e)	Governmental Appropriations – a copy of the appropriation Act or ordinance accompanied by a statement of funding availability from an official of the governmental unit. If funds are to be made available from subsequent fiscal years, a copy of a resolution or other action of the governmental unit attesting to this intent;
_____	f)	Grants – a letter from the granting agency as to the availability of funds in terms of the amount and time of receipt;
_____	g)	All Other Funds and Sources – verification of the amount and type of any other funds that will be used for the project.
\$4,781,539	TOTAL FUNDS AVAILABLE	

APPEND DOCUMENTATION AS **ATTACHMENT-39**, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

IX. 1120.130 - Financial Viability

All the applicants and co-applicants shall be identified, specifying their roles in the project funding or guaranteeing the funding (sole responsibility or shared) and percentage of participation in that funding.

Financial Viability Waiver

The applicant is not required to submit financial viability ratios if:

1. All of the projects capital expenditures are completely funded through internal sources
2. The applicant's current debt financing or projected debt financing is insured or anticipated to be insured by MBIA (Municipal Bond Insurance Association Inc.) or equivalent
3. The applicant provides a third party surety bond or performance bond letter of credit from an A rated guarantor.

See Section 1120.130 Financial Waiver for information to be provided

APPEND DOCUMENTATION AS ATTACHMENT 40, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

The applicant or co-applicant that is responsible for funding or guaranteeing funding of the project shall provide viability ratios for the latest three years for which **audited financial statements are available and for the first full fiscal year at target utilization, but no more than two years following project completion.** When the applicant's facility does not have facility specific financial statements and the facility is a member of a health care system that has combined or consolidated financial statements, the system's viability ratios shall be provided. If the health care system includes one or more hospitals, the system's viability ratios shall be evaluated for conformance with the applicable hospital standards.

Provide Data for Projects Classified as:	Category A or Category B (last three years)			Category B (Projected)
Enter Historical and/or Projected Years:				
Current Ratio				
Net Margin Percentage				
Percent Debt to Total Capitalization				
Projected Debt Service Coverage				
Days Cash on Hand				
Cushion Ratio				

Provide the methodology and worksheets utilized in determining the ratios detailing the calculation and applicable line item amounts from the financial statements. Complete a separate table for each co-applicant and provide worksheets for each.

2. Variance

Applicants not in compliance with any of the viability ratios shall document that another organization, public or private, shall assume the legal responsibility to meet the debt obligations should the applicant default.

APPEND DOCUMENTATION AS ATTACHMENT 41, IN NUMERICAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

19

X. 1120.140 - Economic Feasibility

This section is applicable to all projects subject to Part 1120.

A. Reasonableness of Financing Arrangements

The applicant shall document the reasonableness of financing arrangements by submitting a notarized statement signed by an authorized representative that attests to one of the following:

- 1) That the total estimated project costs and related costs will be funded in total with cash and equivalents, including investment securities, unrestricted funds, received pledge receipts and funded depreciation; or
- 2) That the total estimated project costs and related costs will be funded in total or in part by borrowing because:
 - A) A portion or all of the cash and equivalents must be retained in the balance sheet asset accounts in order to maintain a current ratio of at least 2.0 times for hospitals and 1.5 times for all other facilities; or
 - B) Borrowing is less costly than the liquidation of existing investments, and the existing investments being retained may be converted to cash or used to retire debt within a 60-day period.

B. Conditions of Debt Financing

This criterion is applicable only to projects that involve debt financing. The applicant shall document that the conditions of debt financing are reasonable by submitting a notarized statement signed by an authorized representative that attests to the following, as applicable:

- 1) That the selected form of debt financing for the project will be at the lowest net cost available;
- 2) That the selected form of debt financing will not be at the lowest net cost available, but is more advantageous due to such terms as prepayment privileges, no required mortgage, access to additional indebtedness, term (years), financing costs and other factors;
- 3) That the project involves (in total or in part) the leasing of equipment or facilities and that the expenses incurred with leasing a facility or equipment are less costly than constructing a new facility or purchasing new equipment.

C. Reasonableness of Project and Related Costs

Read the criterion and provide the following:

1. Identify each department or area impacted by the proposed project and provide a cost and square footage allocation for new construction and/or modernization using the following format (insert after this page).

COST AND GROSS SQUARE FEET BY DEPARTMENT OR SERVICE									
Department (list below)	A	B	C	D	E	F	G	H	Total Cost (G + H)
	Cost/Square Foot New	Mod.	Gross Sq. Ft. New	Circ.*	Gross Sq. Ft. Mod.	Circ.*	Const. \$ (A x C)	Mod. \$ (B x E)	
Contingency									
TOTALS									

* Include the percentage (%) of space for circulation

20

D. Projected Operating Costs

The applicant shall provide the projected direct annual operating costs (in current dollars per equivalent patient day or unit of service) for the first full fiscal year at target utilization but no more than two years following project completion. Direct cost means the fully allocated costs of salaries, benefits and supplies for the service.

E. Total Effect of the Project on Capital Costs

The applicant shall provide the total projected annual capital costs (in current dollars per equivalent patient day) for the first full fiscal year at target utilization but no more than two years following project completion.

APPEND DOCUMENTATION AS ATTACHMENT -42, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

XI. Safety Net Impact Statement

SAFETY NET IMPACT STATEMENT that describes all of the following must be submitted for ALL SUBSTANTIVE AND DISCONTINUATION PROJECTS:

1. The project's material impact, if any, on essential safety net services in the community, to the extent that it is feasible for an applicant to have such knowledge.
2. The project's impact on the ability of another provider or health care system to cross-subsidize safety net services, if reasonably known to the applicant.
3. How the discontinuation of a facility or service might impact the remaining safety net providers in a given community, if reasonably known by the applicant.

Safety Net Impact Statements shall also include all of the following:

1. For the 3 fiscal years prior to the application, a certification describing the amount of charity care provided by the applicant. The amount calculated by hospital applicants shall be in accordance with the reporting requirements for charity care reporting in the Illinois Community Benefits Act. Non-hospital applicants shall report charity care, at cost, in accordance with an appropriate methodology specified by the Board.
2. For the 3 fiscal years prior to the application, a certification of the amount of care provided to Medicaid patients. Hospital and non-hospital applicants shall provide Medicaid information in a manner consistent with the information reported each year to the Illinois Department of Public Health regarding "Inpatients and Outpatients Served by Payor Source" and "Inpatient and Outpatient Net Revenue by Payor Source" as required by the Board under Section 13 of this Act and published in the Annual Hospital Profile.
3. Any information the applicant believes is directly relevant to safety net services, including information regarding teaching, research, and any other service.

A table in the following format must be provided as part of Attachment 43.

Safety Net Information per PA 96-0031			
CHARITY CARE			
Charity (# of patients)	Year	Year	Year
Inpatient			
Outpatient			
Total			
Charity (cost in dollars)	Year	Year	Year
Inpatient			
Outpatient			
Total			
MEDICAID			
Medicaid (# of patients)	Year	Year	Year
Inpatient			
Outpatient			
Total			

Medicaid (revenue)			
Inpatient			
Outpatient			
Total			

APPEND DOCUMENTATION AS ATTACHMENT-43, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

XII. Charity Care Information

Charity Care information **MUST** be furnished for **ALL** projects.

1. All applicants and co-applicants shall indicate the amount of charity care for the latest three **audited** fiscal years, the cost of charity care and the ratio of that charity care cost to net patient revenue.
2. If the applicant owns or operates one or more facilities, the reporting shall be for each individual facility located in Illinois. If charity care costs are reported on a consolidated basis, the applicant shall provide documentation as to the cost of charity care; the ratio of that charity care to the net patient revenue for the consolidated financial statement; the allocation of charity care costs; and the ratio of charity care cost to net patient revenue for the facility under review.
3. If the applicant is not an existing facility, it shall submit the facility's projected patient mix by payer source, anticipated charity care expense and projected ratio of charity care to net patient revenue by the end of its second year of operation.

Charity care" means care provided by a health care facility for which the provider does not expect to receive payment from the patient or a third-party payer. (20 ILCS 3960/3) Charity Care **must** be provided at cost.

A table in the following format must be provided for all facilities as part of Attachment 44.

CHARITY CARE			
	Year	Year	Year
Net Patient Revenue			
Amount of Charity Care (charges)			
Cost of Charity Care			

APPEND DOCUMENTATION AS ATTACHMENT-44, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

November 10, 2011

Mr. Andrew Stein
Clark Street Development
980 North Michigan Avenue
Suite 1280
Chicago, IL 60611

RE: *Non-Binding Letter of Intent*
2816 North Kimball Avenue
Chicago, IL

Dear Andy:

USI Real Estate Brokerage Services Inc. has been exclusively authorized by Total Renal Care, Inc. – a subsidiary of DaVita Inc. ("Tenant") to provide the following non-binding agreed to terms letter for the above property.

PREMISES: 2816 North Kimball Avenue, Chicago, IL.

TENANT (or "Lessee"): Total Renal Care, Inc. with a corporate guarantee from DaVita, Inc.

LANDLORD (or "Lessor"): Clark Street Development LLC or its assignees or designates.

SPACE: 9,100 SF contiguous rentable square feet.

Tenant shall have the right to measure space and the final measurement standards will be mutually agreed to by the parties.

PRIMARY TERM: Fifteen (15) year term.

BASE RENT: \$25.75/SF NNN with 10% increases every 5 years.

ADDITIONAL EXPENSES: It is the intention of the Landlord that this "absolute triple net" and accordingly Tenant shall be responsible for all charges related to the use and operation of the Premises during the term, including (without limitation) all utility charges, real estate taxes, and assessments, maintenance charges for the Premises and building and liability and property insurance.

1st year estimate for CAM-\$2.00 psf
1st year estimate for Real Estate Taxes-\$5.75 psf
1st year estimate for Insurance-\$.25 psf

Tenant's pro rata share percentage of operating expenses will be 100%.

Landlord agrees to limit the CAM costs to no greater than five (5) percent increase annually, excluding snow removal and salting.

27

Attachment – 2

LANDLORD'S MAINTENANCE: Landlord, at its sole cost and expense, shall be responsible for the structural components of the Property.

POSSESSION AND RENT COMMENCEMENT: Landlord shall deliver Possession of the Premises to the Tenant upon the later of completion of Landlord's required work (if any) or mutual lease execution. Rent Commencement five (5) months from Landlord's substantial completion of the shell and MBB. Landlord and Tenant shall work together to save time while Landlord is constructing the building shell and will consider any and all timesaving methods for faster completion and delivery of the space to the Tenant.

LEASE FORM: Tenant's standard lease form.

USE: The Use is for a Dialysis Clinic, medical offices or other lawfully permitted use. The current zoning is RS-3. Landlord will rezone this property to B1-3, which is the zoning the surrounds the property and is a zoning designation which will allow for Tenant's medical use. The Landlord has provided a letter of support from Alderman Rey Colon which is attached as Exhibit C.

PARKING: Landlord will provide Tenant with one (1) dedicated stall per 1,000 rsf, and two (2) dedicated handicapped stalls, per the preliminary site plan previously provided by Landlord. To be further determined after site plan is finalized.

BASE BUILDING: Landlord shall deliver to the Premises the Base Building improvements included in the attached Exhibit B.

TENANT IMPROVEMENTS: No tenant allowance.

OPTION TO RENEW: Tenant shall have three (3), five (5) year options to renew the lease. Option rent shall continue at 10% increases every 5 years. Tenant must provide 270 days notice and must not be in default to utilize the option period.

RIGHT OF FIRST OPPORTUNITY ON ADJACENT SPACE: Not applicable.

FAILURE TO DELIVER PREMISES: If Landlord has not delivered the Premises to Tenant by December 15, 2012, Tenant may elect to receive 1 day rent abatement for every day past December 15, 2012. If Landlord has not delivered premises by February 15, 2013, Tenant may terminate. This is subject to force majeure and will be further defined in the lease.

HOLDING OVER: Tenant shall be obligated to pay 110% for the then current rate.

TENANT SIGNAGE: Tenant shall have the right to install building, monument and pylon signage at the Premises, subject to compliance with all applicable laws and regulations.

28

BUILDING HOURS:

Tenant will have access to the building 24 hours a day, 7 days a week.

SUBLEASE/ASSIGNMENT:

Tenant will have the right at any time to sublease or assign its interest in this Lease to any majority owned subsidiaries or related entities of DaVita, Inc. with the consent of the Landlord, whose consent will not be unreasonably withheld or delayed.

ROOF RIGHTS:

Tenant shall have the right to place a satellite dish on the roof at no additional fee. Installation to be performed by a mutually agreed to contractor so not to damage roof or roof warranty. Tenant shall be responsible for its own permits.

NON COMPETE:

Landlord agrees not to lease space to another dialysis provider within a three (3) mile radius of Premises.

HVAC:

HVAC will be a new system and Landlord will provide Tenant with a \$7.00/SF allowance. Allowance shall be inclusive of HVAC equipment, installation, curbing, duct stubs to space from roof, gas piping, electrical power and control wiring. Will be consistent with Ex B 21.0

DELIVERIES:

Deliveries to the Premises will be performed thru a 6' service door, location to be mutually agreed to by the parties.

OTHER CONCESSIONS:

None.

GOVERNMENTAL COMPLIANCE:

Landlord shall represent and warrant to Tenant that, at Landlord's sole expense, at the will cause the Premises, common areas, the building and parking facilities to be in full compliance with any governmental laws, ordinances, regulations or orders relating to, but not limited to, compliance with the Americans with Disabilities Act (ADA) and environmental conditions relating to the existence of asbestos and/or other hazardous materials, or soil and ground water conditions. Will further discuss in Lease mutual haz mat indemnity and Lessor will be obligated to be code compliant at time of delivery date and completion of LL's work.

CONTINGENCIES:

Tenant will need to apply for a Certificate of Need ("CON") for the final location. If Tenant does not get the Certificate of Need by February 28, 2012, the Lease will be null and void. Tenant will make best effort to apply for CON by November 28, 2011. If they do get the Certificate of Need, then they will go forward with the lease based on satisfying the other contingencies that are in their standard Lease Document.

Tenant CON Obligation: Landlord and Tenant understand and agree that the establishment of any chronic outpatient dialysis facility in the State of Illinois is subject to the requirements of the Illinois Health Facilities Planning Act, 20 ILCS 3960/1 et seq, and, thus, the Tenant cannot establish a dialysis facility on the Premises or execute a binding real estate lease in connection therewith unless Tenant obtains a Certificate of Need (CON) permit from the Illinois Health Facilities Planning Board (the "Planning Board"). Tenant agrees to proceed using its commercially reasonable best efforts to submit an application for a CON permit and to

prosecute said application to obtain the CON permit from the Planning Board. Based on the length of the Planning Board review process, Tenant does not expect to receive a CON permit prior to February 28, 2012. In light of the foregoing facts, the parties agree that they shall promptly proceed with due diligence to negotiate the terms of a definitive lease agreement and execute such agreement prior to approval of the CON permit provided, however, the lease shall not be binding on either party prior to the approval of the CON permit and the lease agreement shall contain a contingency clause indicating that the lease agreement is not effective pending CON approval. Assuming CON permit approval is granted, the effective date of the lease agreement shall be the first day of the calendar month following CON permit approval. In the event that the Planning Board does not award Tenant a CON permit to establish a dialysis center on the Premises by February 28, 2012, neither party shall have any further obligation to the other party with regard to the negotiations, lease or Premises contemplated by this Letter of Intent.

In addition to the CON contingency, this LOI and any subsequent lease will be contingent upon the property being rezoned to meet Tenant's specific use.

BROKERAGE FEE:

Landlord recognizes USI Real Estate Brokerage Services Inc. as the Tenant's sole representatives and shall pay a brokerage fee equal to \$1.00/RSF per year of the lease term per separate commission agreement. Commissions to be paid in two parts: 1) 50% due within 30 days of the full lease execution and receipt of the CON and 2) 50% within 30 days of lease commencement and payment of 1st month's rent. The Tenant shall retain the right to offset rent for failure to pay the brokerage fee.

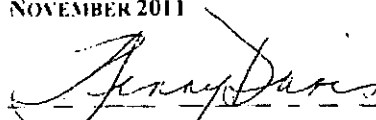

PLANS:

Previously provided by the Landlord.

AGREED TO AND ACCEPTED THIS 10TH DAY OF
NOVEMBER 2011

Chicago, Illinois 60611

RE: 2816 N. Kimball in Chicago, Illinois

Dear Mr. Stern,

I would like to ascertain my support for the proposed 100 Medical Facility at 2816 N. Kimball. I am confident Clark Street is selected with diligent diligence to pursue the rezoning of the property. I have no objection to Clark Street Development filing an application for rezoning of 2816 N. Kimball. All rezoning requests are required to go through the public meeting process.

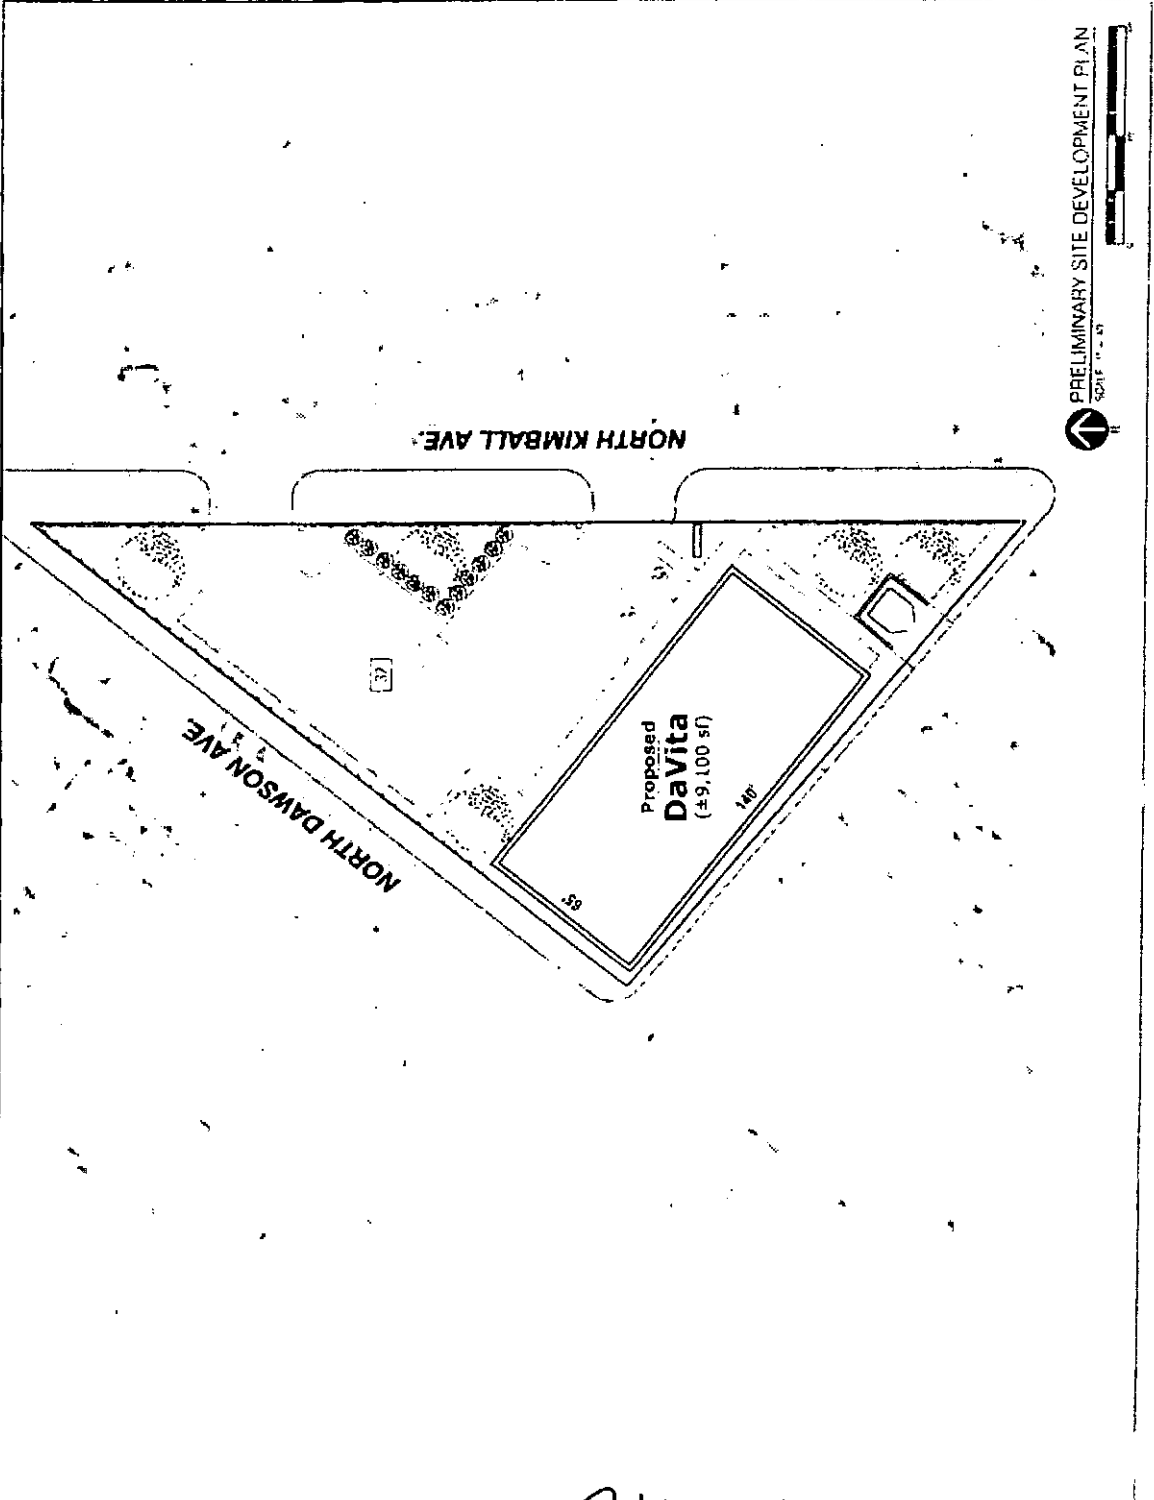

The 35th Ward would benefit greatly from the services that will be provided by this facility. If you have any questions please feel free to contact me at (773) 568-1515.

Respectfully,

Rey Colon
Alderman, 35th Ward

Section I, Identification, General Information, and Certification
Historic Resources Preservation Act Requirements

The Applicants submitted a request for determination that the proposed location is compliant with the Historic Resources Preservation Act from the Illinois Historic Preservation Agency. A copy of the letter is attached at Attachment – 6.

November 18, 2011

Ms. Anne Haaker
Deputy State Historic Preservation Officer
Preservation Services Division
Illinois Historic Preservation Agency
1 Old State Capitol Plaza
Springfield, Illinois 62701

Re: Historic Preservation Act Determination

Dear Ms. Haaker:

This office represents DaVita Inc. and Total Renal Care, Inc. ("Requestors"). Pursuant to Section 4 of the Illinois State Agency Historic Resources Preservation Act, Requestors seek a formal determination from the Illinois Historic Preservation Agency as to whether Requestor's proposed project to relocate a 28-station dialysis facility in an existing building at 2816 N. Kimball, Chicago, Illinois 60618 ("Proposed Project") affects historic resources.

1. Project Description and Address

The Requestors are seeking a certificate of need from the Illinois Health Facilities and Services Review Board to establish a 28-station dialysis facility in an existing building located at 2816 N. Kimball, Chicago, Illinois 60618. No demolition or physical alteration of the existing building or construction of new buildings will occur as a result of the Proposed Project.

2. Topographical or Metropolitan Map

A metropolitan map showing the location of the Proposed Project is attached at Attachment 1.

3. Photographs of Standing Buildings/Structure

A photograph of the existing building is attached at Attachment 2.

42

Polsinelli
Shughart

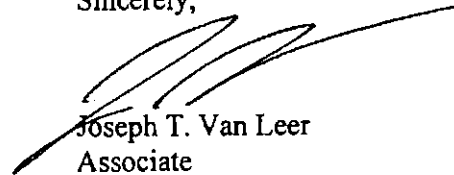

November 18, 2011
Page 2

4. Address for Building/Structure

The Proposed Project will be located at 2816 N. Kimball, Chicago, Illinois 60618.

Thank you for your time and consideration of our request for Historic Preservation Determination. If you have any questions or need any additional information, please feel free to contact me at 312-873-3665 or jvanleer@polsinelli.com.

Sincerely,

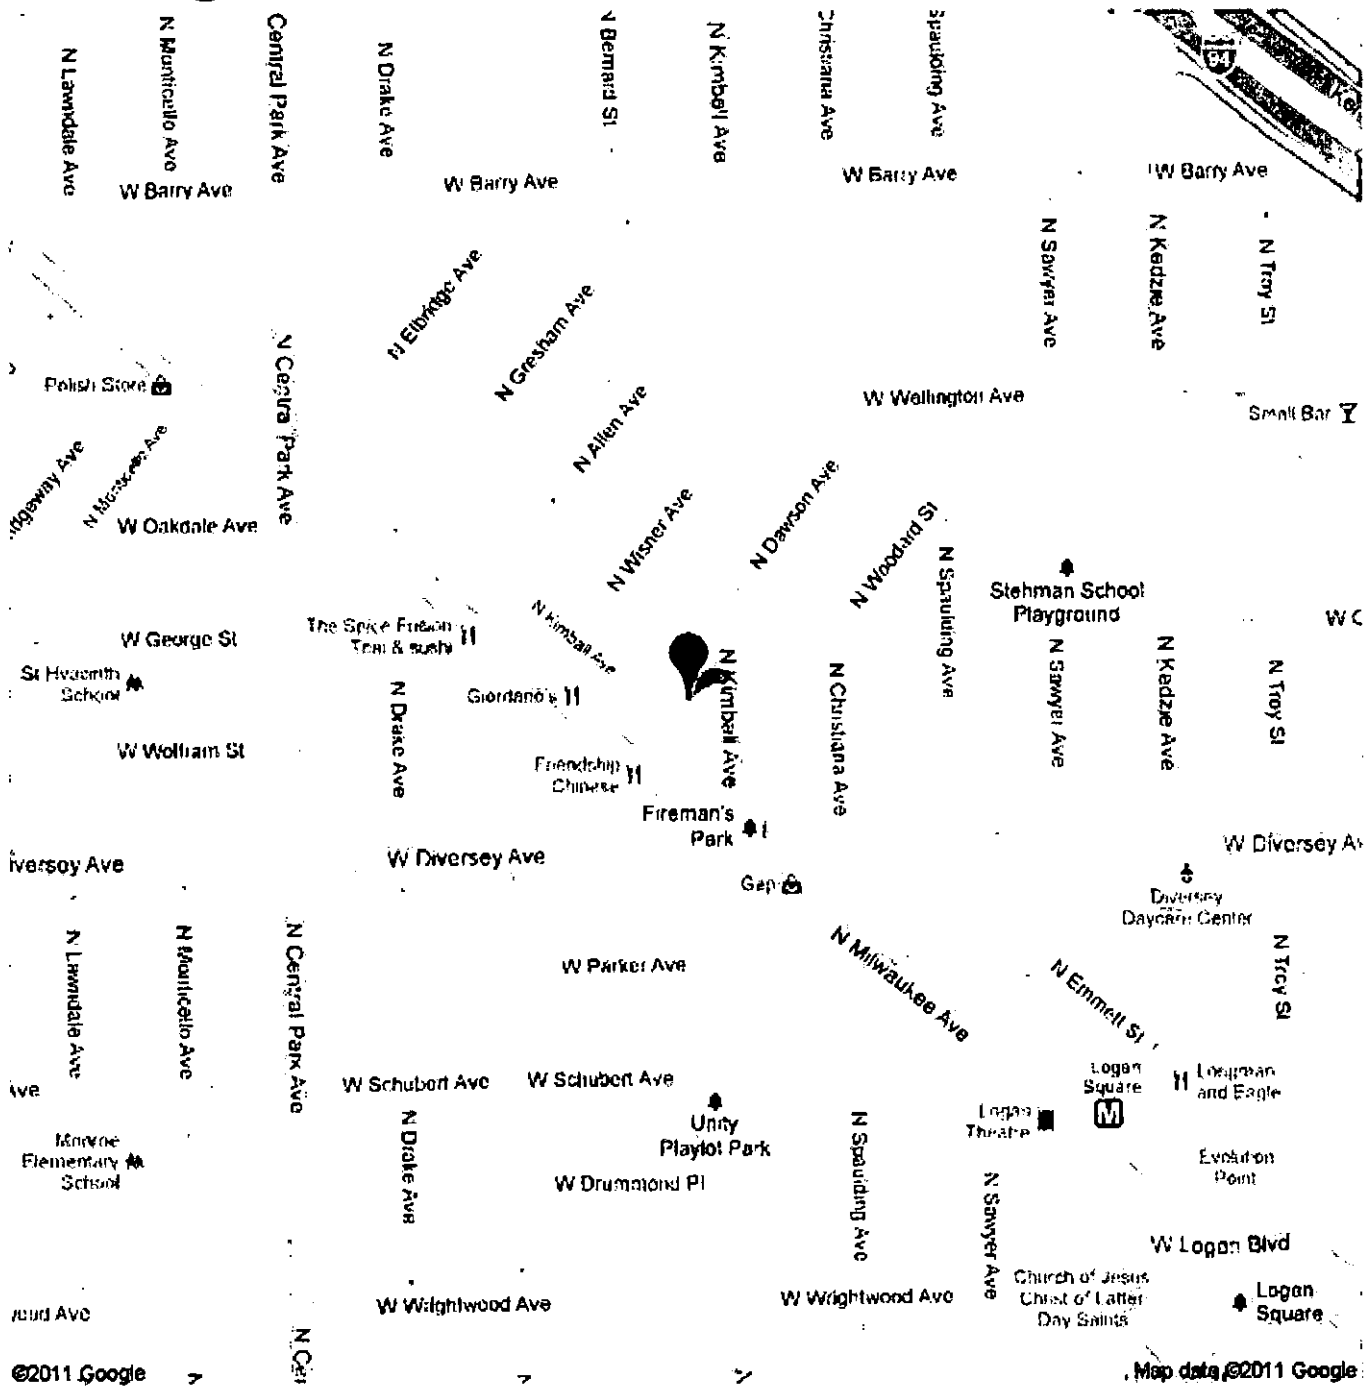

Joseph T. Van Leer
Associate

Section II, Discontinuation
Criterion 1110.130(a), General

1. The Applicants seek authority from the Health Facilities and Services Review Board (the "Board") to discontinue Logan Square Dialysis' 20-station facility located at 2659 North Milwaukee Avenue, Chicago, Illinois 60647 (the "Existing Facility"). As documented at Attachment – 10A, the lease for the Existing Facility will expire on April 30, 2012.
2. No other clinical services will be discontinued as a result of this project.
3. Anticipated Discontinuation Date: April 30, 2012
4. The Applicants lease space for the Existing Facility from with Albany Bank & Trust Co. as Trustee under Trust No. 11-3700. As a result, the Applicants will have no control over the use of the space after discontinuation of the Existing Facility.
5. All medical records will be transferred to the Replacement Facility.
6. This project is a relocation of the Existing Facility and not a discontinuation in its entirety. Therefore, this criterion does not apply.

**FIRST AMENDMENT
TO LEASE AGREEMENT**

THIS FIRST AMENDMENT TO LEASE AGREEMENT (the "First Amendment") is made effective as of the 16 day of October, 2008, by and between **Albany Bank and Trust Company, N.A.**, as Trustee under Trust Number 11-3700 dated December 1, 1978 ("Landlord") and **Total Renal Care, Inc.** ("Tenant") with reference to the following recitals:

RECITALS:

WHEREAS, Landlord and Tenant entered into that certain Lease dated August 11, 1998 (the "Original Lease"), concerning the premises located at 2659 N. Milwaukee Ave., Chicago, Illinois (the "Premises"); and

WHEREAS, the current term of the Lease is set to expire on April 30, 2009, and the parties wish to extend the Lease for an additional thirty six (36) month period, commencing on May 1, 2009 (the "Commencement Date"); and

WHEREAS, Landlord and Tenant now desire to amend said Lease thereto in certain respects as hereinbelow stated.

NOW, THEREFORE, in consideration of the promises, covenants, and agreements hereof and of other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, Landlord and Tenant hereby agree as follows:

1. The term of the Lease shall be extended for thirty six (36) additional months, commencing on May 1, 2009 and expiring on April 30, 2012 (the "Extended Term").

2. The Minimum Rent during the Extended Term shall be \$22,337.50 per month, based on an annual rental rate of \$25.00 per rentable square foot, payable on the first of every month, in advance.

3. Beginning on the 1st anniversary of the Commencement Date and continuing on every subsequent anniversary of the Commencement Date, the Rent shall be increased by two percent (2%) annually over the Rent for the prior Lease Year.

4. All notices, demands and requests which may be or are required to be given by either party to the other shall be in writing and shall be either (i) sent by registered or certified mail, return receipt requested, postage prepaid or (ii) delivered, by hand, or (iii) sent by overnight courier such as Federal Express. All notices to Landlord should be addressed to Landlord c/o Edward P. Larkin, 805 N. Northwest Hwy., Park Ridge, Illinois 60068 or at such other place as Landlord may from time to time designate in written notice to Tenant. All notices to Tenant shall be addressed to Tenant c/o Total Renal Care, Inc., 21250 Hawthorne Boulevard - Suite 800, Torrance, California 90503, Attention: Barry C. Cosgrove, Esq., Vice President - General Counsel, Telephone: (847) 292-2260, Facsimile: (847) 292-2258, with a copy to DaVita Inc., 601 Hawaii Street, El Segundo, California 90245, Attention: General Counsel, Telephone: (310) 536-2400, Facsimile: (310) 536-2679, or to any such other place as Tenant may from time to time designate in written notice to Landlord. All notices, demands and requests which shall be served upon Landlord and Tenant in the manner aforesaid shall be deemed sufficiently served or given for all purposes hereunder.

4. Landlord represents and warrants to Tenant that Landlord is not a "referring physician" or a "referral source" as to Tenant for services paid for by Medicare or a state health care program, as the terms are defined under any federal or state health care anti-referral or anti-kickback, regulation, interpretation or opinion ("Referral Source"). Landlord covenants, during the term of this Lease, it will not knowingly (i) take any action that would cause it to become a Referral Source as to Tenant, or (ii) sell, exchange or transfer the Premises to any individual or entity who is a Referral Source as to Tenant.

5. Landlord and Tenant each represent to the other that it has had no dealings with any real estate broker or agent in connection with the negotiation of this Lease, except for USI Real Estate Brokerage Services Inc., representing Tenant ("Tenant's Broker"). Landlord shall pay Tenant's Broker a brokerage commission pursuant to a separate agreement. In the event Landlord does not timely pay Tenant's Broker such brokerage commission, Tenant may offset the amount of such brokerage commission against Rent due Landlord.

6. This First Amendment may be executed in counterparts and together, such counterparts shall constitute one fully executed First Amendment, valid and binding on the parties.

Except as otherwise expressly provided herein, the Lease Agreement shall remain in full force and effect. Capitalized terms not otherwise defined here have the same meanings as are set forth in the Lease Agreement. In the event of any inconsistency between the terms and provisions of the Lease Agreement and those of this First Amendment, the terms and provisions of this First Amendment shall control. This First Amendment shall be binding upon the successors and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have executed this First Amendment as of the date above written.

51

Section II, Discontinuation
Criterion 1110.130(b), Reasons for Discontinuation

The Existing Facility is old, not well configured, has insufficient space, and there is no option for expansion. Maintenance costs have exceeded reasonable levels and capital improvements cannot address the design issues that limit this space. The building is old and, among other things, the floors require replacement on an ongoing basis. There is limited space to drop off patients, as well as insufficient and inconvenient parking for patients and staff. In fact, unlike most health care facilities that accommodate the needs of their patients with dedicated parking, patients must utilize metered parking on the street. This is due to the facility's congested, urban location and the small size of the site. Furthermore, the use of separate floors at the Existing Facility is sub-optimal. Also, the Medical Director has expressed concern that the space at Existing Facility's is insufficient to meet community standards. Relocation of the Existing Facility will ensure that patients receive access to modern, high quality dialysis treatment primarily during the day.

The Existing Facility is not large enough to serve the needs of current and future patients. It consistently operates near 100% utilization. Although physicians typically press the facility to accommodate their sickest and most frail patients during the first and second shifts, it is often difficult for a patient to schedule dialysis during an optimal shift when facilities are operating at 80% utilization. This requires patients to depart the facility in the dark. Patients, many of whom rely on assistive devices, such as canes and walkers, are faced with additional safety hazards when arriving and departing the facility in the dark. The City of Chicago has a higher crime rate than other parts of the State and both staff and patients are more vulnerable to becoming crime victims outside the facility during evening and night hours.

52

Section II, Discontinuation
Criterion 1110.130(c), Impact on Access

1. The discontinuation of the Existing Facility will not negatively impact access to care. To the contrary, it will improve access to life sustaining dialysis to residents of the Logan Square neighborhood. The Applicants propose to discontinue the existing 20-station dialysis facility and establish a 28-station dialysis facility. The Replacement Facility will be located at 2816 N. Kimball Avenue, Chicago, IL 60618 approximately 0.4 miles, or 2 minutes, from the Existing Facility. As documented throughout this application, there is an identified need for 124 additional stations in HSA 6 and the relocation and expansion of Logan Square Dialysis will assist in meeting this need.
2. Documentation of the Applicant's request for an impact statement, which was sent to all in-center hemodialysis facilities within 45 minutes normal travel time on May 9, 2011 is attached at Attachment – 10B. A list of facilities located within 45 minutes normal travel time is attached at Attachment – 10C. See Appendices – 1 and 2 for documentation that DaVita sent requests for an impact statement to all in-center hemodialysis facilities within 45 minutes travel time.
3. The Applicants have not, to date, received any impact statements regarding the discontinuation.

53

Logan Square Dialysis
2659 North Milwaukee Avenue
Chicago, Illinois 60647

May 9, 2011

CERTIFIED MAIL/RETURN RECEIPT

PRS, LLC
188 Industrial Drive, Suite 100
Chicago, IL 60620

To Whom It May Concern:

I am writing on behalf of DaVita, Inc. and Total Renal Care, Inc. to inform you of the proposed discontinuation of Logan Square Dialysis, a 20-station dialysis facility located at 2659 North Milwaukee Avenue, Chicago, Illinois (the "Existing Facility"). DaVita plans to relocate the Existing Facility to a nearby location. Your facility is within 45 minutes travel time of the Existing Facility.

The estimated date of discontinuation and relocation is no later than April 30, 2012.

Over the past two years, the facility has served between 107 and 117 end-stage renal disease patients at any given time and the census at the end of April 2011 was 115. We expect all existing patients of the Existing Facility will be transferred to the replacement facility.

While we do not anticipate the project will impact access to care for residents of the area or area health care facilities because we will accommodate the Logan Square Dialysis patient base at another nearby location, the Illinois Health Facilities and Services Review Board requires us to inform you of these plans to provide you an option to provide an impact statement from your facility. If you choose to provide such a response, please detail whether your facility's admissions policies place any restrictions or limitations on providing service to residents of the market area and your capacity by shift. Please send any such response within fifteen days of receipt of this letter to Kara M. Friedman, Polsinelli Shughart, PC, 161 North Clark Street, Suite 4200, Chicago, Illinois 60601. If we do not receive a response from you within fifteen days, it will be assumed that you agree that the closure and relocation of the facility will not affect your facility.

54

Attachment - 10B

If you have any questions about DaVita's plans to relocate the facility, please feel free to contact Kara M. Friedman at kfriedman@polsinelli.com or 312-873-3639.

Sincerely,

On behalf of
DaVita, Inc.
Total Renal Care, Inc.

Section III, Project Purpose, Background and Alternatives – Information Requirements
Criterion 1110.230, Project Purpose, Background and Alternatives

Background of the Applicant

The Applicants are fit, willing and able, and have the qualifications, background and character to adequately provide a proper standard of health care services for the community. DaVita is a leading provider of dialysis services in the United States and is committed to innovation, improving clinical outcomes, compassionate care, education and empowering patients, and community outreach. A copy of DaVita's 2010 Community Care report, some of which is outlined below, details DaVita's commitment to quality, patient centric focus and community outreach, was previously submitted on July 11, 2011 as part of Applicants' applications for Proj. Nos. 11-027 to 11-036. The proposed project involves the discontinuation of Logan Square Dialysis' existing 20-station dialysis facility and the establishment of a 28-station Replacement Facility located at 2816 N. Kimball Avenue, Chicago, IL 60618.

DaVita has taken on many initiatives to improve the lives of patients suffering from chronic kidney disease ("CKD") and end stage renal disease ("ESRD"). These programs include the EMPOWER, IMPACT, CathAway, and transplant assistance programs. Information on the EMPOWER, IMPACT and CathAway programs are attached at Attachment – 11A.

While most patients are not aware of it, there are over 26 million people with CKD in the United States and that number is expected to rise. Current data reveals two trends, which help explain the growing need for dialysis services:

- The prevalence of identified CKD stages 1 to 4 has increased from 10% to 13.1% between 1988 and 2004¹
- Increasing prevalence in the diagnosis of diabetes and hypertension, the two major causes of CKD²

Additionally, DaVita's EMPOWER program helps to improve intervention and education for pre-ESRD patients. Approximately 65% of CKD Medicare patients have never been evaluated by a nephrologist.³ Timely CKD care is imperative for patient morbidity and mortality. Adverse outcomes of CKD can often be prevented or delayed through early detection and treatment. Several studies have shown that early detection, intervention and care of CKD may result in improved patient outcomes and reduce ESRD:

- Reduced GFR is an independent risk factor for morbidity and mortality,
- A reduction in the rate of decline in kidney function upon nephrologists referrals has been associated with prolonged survival of CKD patients,
- Late referral to a nephrologist has been correlated with lower survival during the first 90 days of dialysis, and
- Timely referral of CKD patients to a multidisciplinary clinical team may improve outcomes and reduce cost.

A care plan for patients with CKD includes strategies to slow the loss of kidney function, manage comorbidities, and prevent or treat cardiovascular disease and other complications of CKD, as well as ease the transition to kidney replacement therapy. Through the EMPOWER program, DaVita offers educational services to CKD patients that can help patients reduce, delay, and prevent adverse outcomes

¹ US Renal Data System, USRDS 2007 Annual Data Report: Atlas of Chronic Kidney Disease and End-Stage Renal Disease in the United States, Bethesda, MD: National Institutes of Health, National Institute of Diabetes and Digestive and Kidney Diseases; 2007.

³ *Id.*

60

of untreated CKD. DaVita's EMPOWER program encourages CKD patients to take control of their health and make informed decisions about their dialysis care.

DaVita's IMPACT program seeks to reduce patient mortality rates during the first 90-days of dialysis through patient intake, education and management, and reporting. In fact, since piloting in October 2007, the program has not only shown to reduce mortality rates by 8 percent but has also resulted in improved patient outcomes.

DaVita's CathAway program seeks to reduce the number of patients with central venous catheters ("CVC"). Instead patients receive arteriovenous fistula ("AV fistula") placement. AV fistulas have superior patency, lower complication rates, improved adequacy, lower cost to the healthcare system, and decreased risk of patient mortality compared to CVCs. In July 2003, the Centers for Medicare and Medicaid Services, the End Stage Renal Disease Networks and key providers jointly recommended adoption of a National Vascular Access Improvement Initiative ("NVAII") to increase the appropriate use of AV fistulas for hemodialysis. The CathAway program is designed to comply with NVAII through patient education outlining the benefits for AV fistula placement and support through vessel mapping, fistula surgery and maturation, first cannulation and catheter removal. DaVita is an industry leader in the rate of fistula use and had the lowest day-90 catheter rates among large dialysis providers in 2010.

DaVita's transplant referral and tracking program ensures every dialysis patient is informed of transplant as a modality option and promotes access to transplantation for every patient who is interested and eligible for transplant. The social worker or designee obtains transplant center guidelines and criteria for selection of appropriate candidates and assists transplant candidates with factors that may affect their eligibility, such as severe obesity, adherence to prescribed medicine or therapy, and social/emotional/financial factors related to post-transplant functioning.

In an effort to better serve all kidney patients, DaVita believes in requiring that all providers measure outcomes in the same way and report them in a timely and accurate basis or be subject to penalty. There are four key measures that are the most common indicators of quality care for dialysis providers - dialysis adequacy, fistula use rate, nutrition and bone and mineral metabolism. Adherence to these standard measures has been directly linked to 15-20% fewer hospitalizations. On each of these measures, DaVita has demonstrated superior clinical outcomes, which directly translated into 7% reduction in hospitalizations among DaVita patients, the monetary result of which is \$509 million in savings to the health care system and the American taxpayer in 2010.

DaVita is also committed to sustainability and reducing its carbon footprint. In fact, it is the only kidney care company recognized by the Environmental Protection Agency for its sustainability initiatives. In 2010, DaVita opened the first LEED-certified dialysis center in the U.S. Furthermore, it saves approximately 8.5 million pounds of medical waste through dialyzer reuse and it also diverts 95% of its waste through composting and recycling programs. It has also undertaken a number of similar initiatives at its offices and is seeking LEED Gold certification for its corporate headquarters.

DaVita consistently raises awareness to community needs and makes cash contributions to organizations aimed at improving access to kidney care. In 2010, DaVita donated more than \$2 million to kidney disease- awareness organizations such as the Kidney TRUST, the National Kidney Foundation, the American Kidney Fund, and several other organizations. Its own employees assisted in these initiatives by raising more than \$3.4 million through Tour DaVita and DaVita Kidney Awareness Run/Walks.

DaVita does not limit its community engagement to the U.S. alone. It founded Bridge of Life, a 501(c)(3) nonprofit organization that operates on donations to bring care to those for whom it is out of reach. In addition to contributing dialysis equipment to DaVita Medical Missions, Bridge of Life has accomplished 18 Missions since 2006, with more than 75 participating teammates spending more than 650 days abroad. It provided these desperately needed services in Cameroon, India, Ecuador, Guatemala, and the Philippines, and trained many health care professionals there as well.

61

Neither the Centers for Medicare and Medicaid Services or the Illinois Department of Public Health has taken any adverse action involving civil monetary penalties or restriction or termination of participation in the Medicare or Medicaid programs against any of the applicants, or against any Illinois health care facilities owned or operated by the Applicants, directly or indirectly, within three years preceding the filing of this application.

1. Health care facilities owned or operated by the Applicants:

A list of health care facilities owned or operated by the Applicants in Illinois is attached at Attachment – 11B.

Dialysis facilities are currently not subject to State Licensure in Illinois.

2. Certification that no adverse action has been taken against either of the Applicants or against any health care facilities owned or operated by the Applicants in Illinois within three years preceding the filing of this application is attached at Attachment – 11C.
3. An authorization permitting the Illinois Health Facilities and Services Review Board (“HFSRB”) and the Illinois Department of Public Health (“IDPH”) access to any documents necessary to verify information submitted, including, but not limited to: official records of IDPH or other State agencies, and the records of nationally recognized accreditation organizations is attached at Attachment – 11C.

DaVita[®]
Attachment - 11A

Dear Physician Partners:

IMPACT™ is an initiative focused on reducing incident patient mortality. The program provides a comprehensive onboarding process for incident patients, with program materials centered on four key clinical indicators—access, albumin, anemia, and adequacy.

Medical Directors: How can you support IMPACT in your facilities?

- Customize the new Standard Admission Order template into facility-specific orders. Drive use of the standard order with your attending physicians
- Review your facility IMPACT scorecard at your monthly QIFMM meeting
- Talk about IMPACT regularly with your attending physicians

Attending Physicians: How can you support IMPACT in your facilities?

- Use the IMPACT scorecard to assess incident patients
- Educate teammates about the risk incident patients face and how IMPACT can help

How was IMPACT developed? What are the initial results?

From October 2007 to April 2009, IMPACT was piloted in DaVita® centers. Early results, presented at the National Kidney Foundation's Spring Clinical Meeting in Nashville, TN this April, showed an 8% reduction in annualized mortality. In addition to lower mortality, IMPACT patients showed improvements in fistula placement rates and serum albumin levels. The results are so impressive that we are implementing this program throughout the Village.

Your support of this effort is crucial.

If you have not seen the IMPACT order template and scorecard by the end of June, or if you have additional questions about the program, email impact@davita.com. Together we can give our incident patients the quality and length of life they deserve.

Sincerely,

Dennis Kogod
Chief Operating Officer

Allen R. Nissenson, MD, FACP
Chief Medical Officer

FOR IMMEDIATE RELEASE

DaVita's IMPACT Program Reduces Mortality for New Dialysis Patients

Study Shows New Patient Care Model Significantly Improves Patient Outcomes

El Segundo, Calif., (March, 29, 2009) – DaVita Inc., a leading provider of kidney care services for those diagnosed with chronic kidney disease (CKD), today released the findings of a study revealing DaVita's IMPACT™ (Incident Management of Patients, Actions Centered on Treatment) pilot program can significantly reduce mortality rates for new dialysis patients. The study presented at the National Kidney Foundation's Spring Clinical Meeting in Nashville, TN details how the IMPACT patient care model educates and manages dialysis patients within the first 90 days of treatment, when they are most unstable and are at highest risk. In addition to lower mortality rates, patient outcomes improved - confirming the health of this vulnerable patient population is better supported under DaVita's *Relentless Pursuit of Quality*™ care.

The pilot program was implemented with 606 patients completing the IMPACT program over a 12 month period in 44 DaVita centers around the nation. IMPACT focuses on patient education and important clinical outcomes - such as the measurement of adequate dialysis, access placement, anemia, and albumin levels - monitoring the patient's overall health in the first 90 days on dialysis. Data reflects a reduction in annualized mortality rates by eight percent for IMPACT patients compared with non-IMPACT patients in the DaVita network. Given that DaVita has roughly 28,000 new patients starting dialysis every year, this reduction affects a significant number of lives.

In addition, a higher number of IMPACT patients versus non-IMPACT patients had an arteriovenous fistula (AVF) in place. Research shows that fistulas - the surgical connection of an artery to a vein - last longer and are associated with lower rates of infection, hospitalization and death compared to all other access choices.

Allen R. Nissenson, MD, Chief Medical Officer at DaVita says, "The IMPACT program is about quality patient care starting in the first 90 days and extending beyond. Improved outcomes in new dialysis patients translates to better long term results and healthier patients overall."

Researchers applaud the IMPACT program's inclusion of all patients starting dialysis, regardless of their cognitive ability or health status. Enrolling all patients at this early stage in their treatment allows them to better understand their disease and care needs while healthcare providers work to improve their outcomes. Through this program, DaVita mandates reporting on this particular population to better track and manage patients through their incident period.

Dennis Kogod, Chief Operating Officer of DaVita says, "We are thrilled by the promising results IMPACT has had on our new dialysis patients. DaVita continues to be the leader in the kidney care community, and we look forward to rolling out this program to all facilities later this year, to improve the health of all new dialysis patients."

Incident Management of Hemodialysis Patients: Managing the First 90 Days

John Robertson¹, Pooja Goel¹, Grace Chen¹, Ronald Levine¹, Debbie Benner¹, and Amy Burdan¹
¹DaVita Inc., El Segundo, CA, USA

IMPACT (Incident Management of Patients, Actions Centered on Treatment) is a program to reduce mortality and morbidity in new patients during the first 3 months of dialysis, when these patients are most vulnerable. IMPACT was designed to standardize the onboarding process of incident patients from their 0 to 90-day period. We report on an observational (non-randomized), un-blinded study of 606 incident patients evaluated over 12 months (Oct77-Oct08) at 44 US DaVita facilities.

The study focused on 4 key predictive indicators associated with lower mortality and morbidity — anemia, albumin, adequacy and access (4As). IMPACT consisted of:

- (1) Structured New Patient Intake Process with a standardized admission order, referral fax, and an intake checklist;
- (2) 90-day Patient Education Program with an education manual and tracking checklist;
- (3) Tools for 90-day Patient Management Pathway including QOL; and
- (4) Data Monitoring Reports.

Data as of July, 2008 is reported. Patients in the IMPACT group were 60.6 ± 15.1 years old (mean±SD), 42.8% Caucasian, 61% male with 25% having a fistula. Results showed a reduction in 90-day mortality almost 2 percentage points lower (6.14% vs. 7.98%; $p < 0.10$) among IMPACT versus nonIMPACT patients. Changes among the 4As showed higher albumin levels from 3.5 to 3.6 g/dL (note that some IMPACT patients were on protein supplementation during this period) and patients achieving fistula access during their first 90-days was 25% vs. 21.4%, IMPACT and nonIMPACT, respectively ($p \leq 0.05$). However, only 20.6% of IMPACT patients achieved Hct targets ($33 \leq \text{Hb} \leq 36$) vs. 23.4% for controls ($p < 0.10$); some IMPACT patients may still have > 36 -level Hcts. Mean calculated Kt/V was 1.54 for IMPACT patients vs. 1.58 for nonIMPACT patients ($p \leq 0.05$).

IMPACT is a first step toward a comprehensive approach to reduce mortality of incident patients. We believe this focus may help us to better manage CKD as a continuum of care. Long-term mortality measures will help determine if this process really impacts patients in the intended way, resulting in longer lives and better outcomes.

ede

IMPACT Tools

Here's how the IMPACT program will help the team record data, educate patients and monitor their progress in your facilities.

- 1 Standard Order Template, a two-page form with drop-down menus that can be customized into a center-specific template
- 2 Intake Checklist to gather registration and clinical data prior to admission
- 3 Patient Announcement to alert teammates about new incident patients
- 4 Patient Education Book and Flip Chart to teach patients about dialysis
- 5 Tracking Checklist for the team to monitor progress over the first 90 days
- 6 IMPACT Scorecard to track monthly center summary and patient level detail for four clinical indicators: access, albumin, adequacy, anemia

A detailed medical form with multiple sections for patient information, clinical data, and administrative use. It includes fields for name, date of birth, and various medical history sections.

A checklist form titled 'INTAKE CHECKLIST' with various checkboxes and fields for recording patient registration and clinical data before admission.

Attention, teammates!
A new IMPACT patient is about to step up to the plate.
Let's become their biggest fans. Let's coach and encourage them. And let's cheer them along every step of their first 90 days.

Handwritten initials, possibly "UB", in a cursive style.

Knowledge is power.

EMPOWER[®] is an educational program by DaVita[®]. The program includes a series of free community based classes for patients with chronic kidney disease (CKD). These classes encourage you to take control of your kidney disease and prepare for dialysis by making healthy choices about your kidney care

Taking Control Of Kidney Disease

Learn how to slow the progression of kidney disease.

- Kidney disease and related conditions
- Behavior modification
- Dietary guidelines
- Common medications
- Insurance choices
- Ways to cope with CKD
- Questions to ask your health care team

Making Healthy Choices

Learn how to prepare for dialysis.

- Kidney disease and related conditions
- Behavior modification
- Dietary guidelines
- Common medications
- Treatments that allow you to stay active and continue to work
- Insurance choices
- Ways to cope with CKD
- Questions to ask your health care team

Treatment Choices

An in-depth look at all of your treatment choices.

- Kidney disease and related conditions
- Treatments that allow you to stay active and continue to work
- Insurance choices
- Ways to cope with CKD
- Questions to ask your health care team

To register for a class, call 1-888-MyKidney (695-4363).

Office of the Chief
Medical Officer (OCMO)
Alan F. Nessenson MD
Chief Medical Officer
Margoth Mathews MD
Robert Provenzano MD
John Robertson MD
David B. Van Wyck MD

April 30, 2009

Dear Physicians:

As your partner, DaVita® and OCMO are committed to helping you achieve unprecedented clinical outcomes with your patients. As part of OCMO's Relentless Pursuit of Quality™, DaVita will be launching our top two clinical initiatives; IMPACT and CathAway™, at our annual 2009 Nationwide Meeting. Your facility administrators will be orienting you on both programs upon their return from the meeting in early May.

IMPACT: The goal of IMPACT is to reduce incident patient mortality. IMPACT stands for Incident Management of Patients Actions Centered on Treatment. The program focuses on three components: patient intake, education and management and reporting. IMPACT has been piloting since October 2007 and has demonstrated a reduction in mortality. The study recently presented at the National Kidney Foundation's Spring Clinical Meeting in Nashville, TN. In addition to lower mortality rates, patient outcomes improved - confirming this vulnerable patient population is healthier under DaVita's relentless pursuit of quality care.

CathAway: Higher catheter use is associated with increased infection, morbidity, mortality and hospitalizations ^{(1) (2)}. The 7-step Cathaway Program supports reducing the number of patients with central venous catheters (CVCs). The program begins with patient education outlining the benefits of fistula placement. The remaining steps support the patient through vessel mapping, fistula surgery and maturation, first cannulation and catheter removal. For general information about the CathAway program, see the November 2008 issue of QUEST, DaVita's Nephrology Journal.

Here is how you can support both initiatives in your facilities:

- **Assess incident patients regularly in their first 90 days:** Discuss patients individually and regularly. Use the IMPACT scorecard to prompt these discussions.
- **Adopt "Facility Specific Orders":** Create new facility specific orders using the form that will be provided to you.
- **Minimize the "catheter-removal" cycle time:** Review each of your catheter patients with your facility teammates and identify obstacles causing delays in catheter removal. Work with the team and patients to develop action plans for catheter removal.
- **Plan fistula and graft placements:** Start AV placement plans early by scheduling vessel mapping and surgery evaluation appointments for Stage 4 CKD patients. Schedule fistula placement surgery for those patients where ESRD is imminent in the next 3-6 months.

70

DaVita.

Launch Kits:

In May, Launch Kits containing materials and tools to support both initiatives will be arriving at your facilities. IMPACT kits will include a physician introduction to the program, step by step implementation plan and a full set of educational resources. FAs and Vascular Access Leaders will begin training on a new tool to help identify root-causes for catheter removal delays.

Your support of these efforts is crucial. As always, I welcome your feedback, questions and ideas. Together with you, our physician partners, we will drive catheter use to all-time lows and help give our incident patients the quality and length of life they deserve.

Sincerely,

Allen R. Nissenson, MD, FACP
Chief Medical Officer, DaVita

- (1) Dialysis Outcomes and Practice Patterns Study (DOPPS): 2 yrs/7 Countries / 10,000 pts.
- (2) Pastan et al: Vascular access and increased risk of death among hemodialysis patients.

525 West Jefferson Street, 2nd Floor
Springfield, Illinois 62761

Dear Chairman Galassie:

I hereby certify under penalty of perjury as provided in § 1-109 of the Illinois Code of Civil Procedure, 735 ILCS 5/1-109 that no adverse action has been taken against any facility owned or operated by DaVita Inc. or Total Renal Care, Inc. during the three years prior to filing this application.

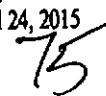

Additionally, pursuant to 77 Ill. Admin. Code § 1110.230(a)(3)(C), I hereby authorize the Health Facilities and Services Review Board ("HFSRB") and the Illinois Department of Public Health ("IDPH") access to any documents necessary to verify information submitted as part of this application for permit. I further authorize HFSRB and IDPH to obtain any additional information or documents from other government agencies which HFSRB or IDPH deem pertinent to process this application for permit.

Sincerely,

Tom Usilton
Senior Vice President
DaVita Inc.
Total Renal Care, Inc.

Section III, Project Purpose, Background and Alternatives – Information Requirements
Criterion 1110.230(b), Project Purpose, Background and Alternatives

Purpose of the Project

1. The Applicants propose to discontinue the Existing Facility located at 2659 North Milwaukee Avenue, Chicago, Illinois 60647, which is currently operating at 98% utilization, and establish a replacement facility with 28 stations at 2816 N. Kimball Avenue, Chicago, IL 60618 (the "Replacement Facility") to meet the growing need for dialysis services in the City of Chicago. There is currently a need for 124 dialysis stations in the Chicago HSA.

The Existing Facility is insufficient to meet demand. It is dilapidated, in disrepair, has insufficient space, and no option for expansion. Maintenance costs have exceeded tolerable levels, the facility is aging, and the floors require constant, costly, replacement. Furthermore, there is limited space to drop off patients, as well as insufficient and inconvenient parking for patients and staff. In fact, visitors must utilize metered parking on the street. Finally, physician staff has expressed concern that the space at Existing Facility's is insufficient to meet community standards. Relocation and expansion of the Existing Facility will ensure that patients receive access to modern, high quality dialysis treatment at optimal times during the day. The proposed location is just 0.4 miles, or 2 minutes, from the Existing Facility, so the facility will continue to serve its current patients and meet rising demand in its geographic service area ("GSA"). The additional stations at the new site will reduce the need for additional stations in Chicago from 124 to 116.

Logan Square has a large Hispanic community. In fact, based on the 2010 U.S. Census data, approximately 46% of the population is Hispanic. This is important, as the Hispanic population has a 1.5 times greater ESRD incident rate than the general population. For the past several years, the Existing Facility as consistently operated above the State's 80% utilization rate. As reported by the Renal Network, Logan Square Dialysis was operating at 98% utilization as of September 30, 2011. Although physicians typically press the facility to accommodate their sickest and most frail patients during the first and second shifts, it is often difficult for a patient to schedule dialysis during these shifts when facilities are operating at 80% utilization. This requires many patients to depart the facility in the dark. Patients, many of whom rely on assistive devices, such as canes and walkers, are faced with additional safety hazards when arriving and departing the facility in the dark. The City of Chicago has a higher crime rate than other parts of the State and both staff and patients are more vulnerable to becoming crime victims outside the facility during evening and night hours. The addition of 8 dialysis stations will make treatment times more convenient for patients without negatively impacting utilization at other facilities.

Currently, the Existing Facility serves 121 ESRD patients. Dr. Kap Joon No, the Medical Director for Logan Square Dialysis, anticipates all 121 current patients will transfer to the Replacement Facility. Dr. No also identifies 38 Stage 4 and 5 Stage 5 CKD patients that would likely be referred to the Replacement Facility. See Attachment – 12A. Based upon a 35% attrition rate due to patient death, transplant, or return of function, it is projected that 27 of the patients will require dialysis within the next 12 to 18 months. Thus, the approximately 148 patients will be referred to the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

Furthermore, utilization of existing facilities to accommodate growing need for dialysis is not feasible. As shown in Attachment – 12B, there are currently 64 existing or approved dialysis facilities within 30 minutes normal travel time of the Replacement Facility and the Renal Network Utilization Data shows that utilization of existing facilities is 73%.

The Logan Square Dialysis chronically ill patient population is largely comprised of low-income, disabled, and vulnerable individuals that require access to care DaVita provides at Logan Square. Many patients rely on public transit, family members, and friends for transportation to and from treatment. Including transportation time and transition time, patients typically devote 15 to 20 hours

for dialysis each week over three days. It is essential the Applicants obtain approval for a new location in order to continue providing necessary dialysis services to Logan Square Dialysis' patients. Although there are other facilities in the area, they will not be able to easily accommodate Logan Square patients due to high utilization.

2. A map of the market area for the proposed facility is attached at Attachment – 12C. The market area encompasses a 16 mile radius around the proposed facility. The boundaries of the market area are as follows:
 - North approximately 30 minutes normal travel time to Morton Grove
 - Northeast approximately 9 minutes normal travel time to Navy Pier
 - East approximately 2 minutes normal travel time to Lakeshore Drive
 - Southeast approximately 30 minutes normal travel time to East Chicago
 - South approximately 30 minutes normal travel time to South Holland
 - Southwest approximately 30 minutes normal travel time to Palos Hills
 - West approximately 30 minutes normal travel time to Oakbrook
 - Northwest approximately 30 minutes normal travel time to O'Hare International Airport
3. The minimum size of a GSA is 30 minutes; however, most of the patients reside within the immediate vicinity of the proposed facility. Diabetes and hypertension (high blood pressure) are the two leading causes of CKD and ESRD. See Attachment 12D. Due to socioeconomic conditions in the community, this population exhibits a higher prevalence of obesity, which is a driver of diabetes and hypertension. Hispanics are at an increased risk of ESRD compared to the general population due to the higher prevalence of these conditions in the Hispanic community. In fact, the incident rate among the Hispanic population is 1.5 times greater than the non-Hispanic population. Notably, a large percentage of the Logan Square neighborhood is Hispanic (approximately 46%). This, coupled with the aging population, is expected to increase utilization.

The current patient utilization along with the pre-ESRD patients identified by Dr. No confirms this. 121 patients will continue treatment at the Replacement Facility, and Dr. No is currently treating 121 Stage 4 and Stage 5 CKD patients. Assuming a 35% attrition rate due to death, transplant, return of function, and relocation, approximately 27 patients of the current CKD patients will initiate in-center hemodialysis at the Replacement Facility. This represents a utilization of 88% within 12 to 18 months following project completion. This will contribute to the need identified in the HFSRB Inventory.

The proposed facility will be located in Chicago. As shown in the physician referral letter attached at Attachment – 12A, the majority of pre-ESRD patients projected to utilize the proposed facility reside in Logan Square Dialysis' service area.

4. Source Information

The Renal Network, Utilization Data for the Quarter Ending September 30, 2011.

U.S. Census Bureau, American FactFinder, Fact Sheet, available at http://factfinder.census.gov/home/saff/main.html?_lang=en (last visited Nov. 18, 2011).

77

5. As stated, the Existing Facility is currently operating at approximately 98.33% utilization, which requires the facility to operate a 4th shift with the last patient leaving well after 10 p.m. The proposed project, which includes the addition of 8 stations, will increase needed area dialysis capacity and allow patients to obtain treatment at more optimal times. Additionally, the increase in capacity will enable DaVita to more effectively meet projected increases in demand set forth above.

6. The Applicants anticipate the proposed facility will have quality outcomes comparable to other DaVita facilities. Additionally, in an effort to better serve all kidney patients, DaVita believes in requiring all providers measure outcomes in the same way and report them in a timely and accurate basis or be subject to penalty. There are four key measures that are the most common indicators of quality care for dialysis providers - dialysis adequacy, fistula use rate, nutrition and bone and mineral metabolism. Adherence to these standard measures has been directly linked to 15-20% fewer hospitalizations. On each of these measures, DaVita has demonstrated superior clinical outcomes, which directly translated into 7% reduction in hospitalizations among DaVita patients, the monetary result of which was \$509M in hospitalization savings to the health care system and the American taxpayer in 2010.

Dale Galassie
Chair
Illinois Health Facilities and Services Review Board
525 West Jefferson Street, 2nd Floor
Springfield, Illinois 62761

Dear Chairman Galassie:

I am the medical director for Logan Square Dialysis. I am writing in support of DaVita's proposed relocation and expansion of Logan Square Dialysis. DaVita proposes to discontinue its existing 20-station dialysis facility located at 2659 North Milwaukee Avenue, Chicago, Illinois and establish a new 28-station dialysis facility to be located at 2816 North Kimball Avenue, Chicago, Illinois. The existing facility cannot adequately serve the needs of current and future patients. It is an aging facility in constant need of repair, has insufficient space to accommodate the growing number of ESRD patients, and cannot be expanded. Utilization at the existing facility consistently operates significantly above the State's 80% utilization standard, making it difficult for patients to schedule their dialysis at optimal times. Logan Square is a diverse neighborhood with a large Hispanic population. Importantly, the incidence of ESRD in the Hispanic community is 1.5 times greater than in the general population. A new 28-station dialysis facility will improve access and ensure that patients in the Logan Square neighborhood receive access to modern, high quality dialysis treatment.

Logan Square Dialysis is currently treating 121 ESRD patients. A list of current patients by initials and zip code is attached at Attachment 1. Over the past three years I have referred 65 ESRD patients for dialysis: 15 patients in 2009, 26 ESRD patients in 2010, and 24 ESRD patients in 2011. The total number of patients treated by facility and zip code of residence for the most recent three years as reported to The Renal Network is attached hereto at Attachment 2.

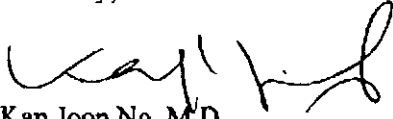

Additionally, I am currently treating 38 stage 4 and 5 Stage 5 pre-ESRD patients that reside in and around Logan Square. I conservatively estimate 27 patients will be referred to Logan Square Dialysis within the next 12 to 18 months. A list of these pre-ESRD patients by initials and zip code is attached hereto as Attachment 3.

These patient referrals have not been used to support another pending or approved certificate of need application.

The information in this letter is true and correct to the best of my knowledge.

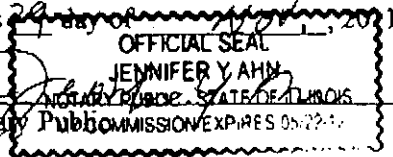

I support the proposed relocation of Logan Square Dialysis.

Sincerely,

Kap Joon No, M.D.

Editorial Review

The obesity epidemics in ESRD: from wasting to waist?

Carmine Zoccali

Nephrology, Dialysis and Transplantation Unit and CNR-IBIM Clinical Epidemiology and Pathophysiology of Renal Diseases and Hypertension, Reggio Calabria, Italy

Keywords: CKD; ESRD; malnutrition; metabolic syndrome; obesity

During the last six decades, from the World War II years on, the phenotype of human beings has changed profoundly. The dominant slim, pale and light phenotype of the 1920s has gradually been overthrown by the heavy, large and ponderous phenotype of obese people. Obesity is rampant in the USA (<http://www.cdc.gov/nccdphp/dnpa/obesity/trend/maps/>, accessed on 20th July 2008) and, even though to a lesser degree, most European countries share the same epochal evolution [1]. Type 2 diabetes and cardiovascular diseases are the two most important non-communicable disease outcomes of obesity. Abdominal obesity is strongly associated, and at least in part in a causal manner, with hypertension, dyslipidaemia and impaired insulin resistance [2]. Well beyond these complications, neoplasia [3], greater exposure to drugs of various sort, sterility [4], asthma [5], non-alcoholic liver disease [6] and osteoarthritis [7] are all much concerning sequelae of this epidemics. The risk of disease and disability attributable to overweight and obesity starts early, just when the upper limit of the ideal body mass index (BMI) (21–23 kg/m²) is trespassed and rises linearly at progressively higher BMI levels [8,9]. The burden of disease attributable to excess BMI among adults in the USA is enormous. Obesity at age 40 years reduced life expectancy by ~7 years in women and by ~6 years in men in the Framingham cohort [10]. In Europe, more than 1 million deaths and ~12 million life-years of ill health (disability adjusted life-years—DALYs) were counted in 2000 [9].

Obesity epidemics in the dialysis population

Until now the major focus of nutrition research in dialysis patients has been on low BMI and protein energy wasting

[11]. The identification and elucidation of this pervasive condition in the dialysis population has certainly been a major achievement of modern nephrology. However, a thorough refocusing of the problem is needed. In Western countries, overweight and obesity have now gained the ominous role of leading risk factors for chronic kidney disease (CKD) [12]. The pathophysiological underpinnings of obesity-related CKD are still unclear, but solid working hypothesis have been formulated and the issue is being intensively investigated in experimental models and in human studies [13]. From an epidemiologic point of view, the association between BMI and the incidence of ESRD has been convincingly established in population-based studies in Japanese men [14] and in American people [15]. Obesity is one of the most frequent risk factors for progressive CKD in the general population. For this reason, this condition has become highly prevalent in dialysis units (Figure 1). The problem was nicely described by Kramer *et al.*, in synchronic analyses based on the USRDS and on the Behavioral Risk Factor Surveillance System of the Centers for Disease Control and Prevention [16]. During a relatively brief period (just 8 years, from 1994 to 2002), the mean BMI increased from 25.7 kg/m² among incident patients in 1995 to 27.5 kg/m² in 2002 and from 25.7 to 26.7 kg/m² in the total US population (Figure 2). Overall in 2002, almost one-third of incident dialysis patients were obese and, worryingly so, the prevalence of patients with stage 2 obesity (BMI > 35 kg/m²) increased by 63%. As expected, the prevalence of obesity was higher in diabetics than in non-diabetics with a forecasted 2007 prevalence of total obesity in these patients as high as 44.6%. The predicted population average of BMI for 2007 (~28 kg/m²) clearly indicates that just a small fraction of dialysis patients in the USA have a normal or a low body weight. In a cohort of incident dialysis patients (1997–2004) in Europe (the Netherlands) [17], the average BMI was 25.3 kg/m² showing that in the other side of the Atlantic more than half of ESRD patients are overweight or obese. In brief, there is unmistakable evidence that the obese phenotype is at least as frequent in the dialysis population as it is in the general population. Thus, nutritional disorders in ESRD should be interpreted in a context that takes into appropriate account that fat excess rather than fat deficiency is the most common trait in dialysis patients.

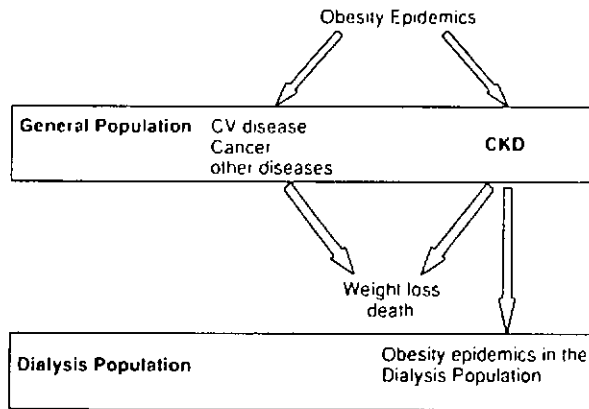

Fig. 1. Simple model whereby the obesity epidemics in the general population generate a parallel obesity epidemics in the dialysis population. Death and weight loss generated by CKD and other obesity-driven diseases represent competing risks that limit the rise in the prevalence of obesity in the dialysis population.

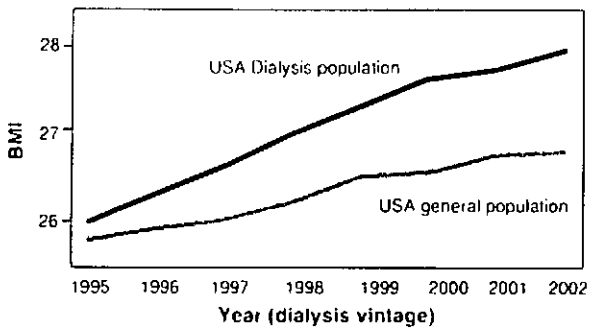

Fig. 2. Temporal trends in BMI (kg/m²) among incident ESRD patients population by year of dialysis initiation and in the coeval general US population (Behavioral Risk Factor Surveillance System). Redrawn from Kramer HJ *et al.* [16].

Obesity and the reverse epidemiology conundrum in ESRD

The term 'reverse epidemiology' has been widely adopted to describe the apparently paradoxical inverse association between mortality and BMI and other risk factors in ESRD. Studies in renal registries [18], in clinical databases [19] and in large, international studies [20] have coherently shown that BMI is indeed inversely associated with death risk. This phenomenon is not typical of ESRD being common also to other chronic conditions, including cardiovascular disease [21,22]. The term 'reverse epidemiology' has fierce opponents [23]. It was emphasized that rules of epidemiology have not been reversed in dialysis patients, and recent data in a European dialysis cohort documented that the relationship between the BMI and mortality does not deviate from that of the coeval background population [17]. In addition, most studies did not adequately control for potential confounders such as cancer and CHF, and smoking. The main reason of concern with the term 'reverse' is that such a definition may distract from the complexity of the ESRD population and

may facilitate confusion between association and causation thus diverting clinical attention and scientific research from truly important issues related to risk factors modification in this population [23]. There is no question that obesity was a trait providing survival advantage to our ancestors at a time when famine and infectious diseases decimated the population and when the average duration of human life was 40 years or less [24]. The same survival advantage may apply to high-risk conditions such as cardiac disease, cancer and ESRD that are all characterized by a short life expectancy and by specific (non-Framingham) risk factors. Any case studying risk factors for survival in the dialysis population in no way imposes deviations from classic epidemiology principles. In this respect, there is absolutely no dissent on the fact that a high BMI *per se* should not be seen as a necessarily protective factor in ESRD. In fact, current guidelines in ESRD recommend a multidimensional assessment of nutritional status [25,26] both for prognosis and treatment while the very champions of the 'reverse epidemiology' concept accurately dissected the BMI-protein balance link when assessing the risk of malnutrition in this population [27].

How to measure the obesity burden in epidemiological studies

Defining obesity and how to measure it is of fundamental importance if we are to develop disease-specific studies in ESRD. However, in broad terms, the very essence of obesity and how it should be measured in population studies is an unsettled problem. This is so in epidemiological research in general and in research specific to ESRD as well. Most of the progress on the understanding of the detrimental effect of fat excess on human health was made in studies based on the BMI. In recent years, this time-honoured metric has been under intense scrutiny and, on the basis of a thorough meta-analysis, eminent epidemiologists came to the conclusion that the BMI is an inadequate metric for the cardiovascular risk of obesity [28]. Authoritative claims have been made that BMI should be abandoned straightaway [29]. Which is the best metric of this condition remains highly controversial. Proper positioning of the indicators of obesity may be obtained by studying the inter-correlation between the various metrics, their relationship with clinical outcomes and by cogent biological knowledge. Detailed analyses of the relationship between BMI, overall fat mass, waist circumference and abdominal visceral fat (as measured by computed tomography) in Caucasian and African American population samples have been made [30]. Collectively, the mean correlation between BMI and fat mass in these populations was very high ($r = 0.94$). Of note, waist circumference correlated very well both with BMI ($r = 0.93$) and overall fat mass ($r = 0.92$). Finally, BMI ($r = 0.72$) as well as the other metrics (fat mass $r = 0.73$; waist circumference $r = 0.77$) correlated equally well with abdominal visceral adiposity by CT. Since the major factor implicated in the health risks of obesity seems to be the excess adipose tissue and/or some aspects of cell biology, the data on the relationship between BMI and overall fat mass

90

would be against the contention that BMI is not a valid surrogate for fat mass, at least in apparently healthy adults in the community. The same reasoning applies to waist circumference. Since most of the variance in obesity-related anthropometrics is captured by BMI, some obesity experts see no reason to replace BMI by waist circumference or other metrics as a measure of obesity [30]. However, it has been argued that this position does not consider that analyses in apparently healthy subjects may not apply to patients with chronic conditions. Furthermore, simple analyses on inter-correlations between indicators of obesity in no way can surrogate the study of the relationship of these measurements with clinical outcomes, which is the ultimate, adjudicative criterion. In this respect, it is well demonstrated that waist circumference and the related metric waist hip ratio (WHR) add prognostic information at any level of BMI. In a large survey based on the III National Health and Examination survey within the three BMI categories of normal weight, overweight and class I obesity, a larger waist circumference coherently identified individuals at an increased health risk [31]. Likewise, the WHR was the strongest body size measure associated with myocardial infarction in the INTERHEART study, a world-wide extended case-control study [32]. Importantly, in this study, BMI lost substantial prognostic value in an analysis adjusting for WHR and other risk factors while the predictive power of WHR became stronger after these statistical adjustments, which is in line with biological evidence indicating that visceral fat is a relevant source of endogenous compounds impinging upon cardiovascular health. Whether metrics of waist circumference hold prognostic value for death and cardiovascular complications in patients with chronic diseases other than myocardial infarction is still unknown [33].

Obesity and protein energy wasting in ESRD: a two-dimensional problem

BMI is the most used anthropometric measure of overall body size in ESRD. The limitations of this metric are well known to nephrologists [11]. BMI does not distinguish between fat mass and lean mass. At similar BMI, percentage of body fat may differ considerably in people who exercise heavily and in sedentary people. Furthermore, in the elderly and non-Caucasian populations, the relationship between BMI and fat depots is different from that in the young and Caucasian populations [34]. Importantly, BMI does not give information on segmental fat distribution (abdominal versus peripheral fat), a phenomenon with metabolic and clinical bearings. Abdominal obesity is largely caused by the accumulation of visceral (or intra-abdominal) fat while peripheral obesity is mainly characterized by subcutaneous fat accumulation. Due to metabolic differences of the two fat depots, the two may differ in their role of predicting metabolic disturbances and clinical events. Although still not adequately emphasized, the notion that nutritional disorders in ESRD cannot be merely classified on the basis of BMI is well recognized. In 2003, Beddhu *et al.* [35] looked at the problem of which body component (increased

muscle mass or body fat) confers survival advantage in a large cohort of incident haemodialysis patients with high BMI. Twenty-four-hour urinary creatinine excretion prior entering regular dialysis treatment was used as a measure of muscle mass. Patients with high BMI had lower death risk than those with a normal or low BMI. However, high BMI patients with relatively low muscle mass (urinary creatinine ≤ 0.55 g/day) had higher risk of all-cause (HR, 1.14; $P < 0.001$) and cardiovascular (HR, 1.19; $P < 0.001$) deaths than patients with the same BMI but low muscle mass. Similarly, in a recent study by Honda in a relatively small cohort of ESRD patients in Sweden [36], protein-energy wasting (as measured by the subjective global assessment of nutrition) was equally prevalent in patients with low, normal and high BMI. In this cohort, BMI *per se* did not predict mortality. However, for each BMI group, protein-energy malnutrition was associated with increased death risk. Overall, these studies show that 'obese sarcopenia', i.e. a high body mass in the face of a low urinary creatinine or protein energy malnutrition, underlies a high death risk in ESRD patients thus indicating that the prognostic value of nutritional status in dialysis patients should be based on the BMI and on metrics of muscle mass and/or protein-energy balance.

Anthropometric measures of visceral fat accumulation such as waist circumference and the WHR are directly associated with all-cause and CV mortalities in the general population. Notwithstanding, ESRD is a chronic condition where nutrition disorders are exceedingly common, and no specific studies of these metrics are available in dialysis patients. Also in light of the rising tide of overweight and obesity in the ESRD population and of the adverse clinical outcomes observed in obese sarcopenia [35,36], the issue of simultaneously testing the prognostic value of metrics of overall body size (like the BMI) and segmental fat accumulation (waist circumference and WHR) in ESRD patients appears to be of major relevance. Very recently, relevant information on the validity of waist circumference as a measure of visceral fat accumulation has been gathered in patients with CKD [37]. In a series of 122 Brazilian patients with stage 3–5 CKD, this metric was strongly associated with visceral fat as measured by abdominal computed tomography and the association of this measurement with cardiovascular risk factors was of the same magnitude of that observed for visceral fat. These findings suggest that waist circumference is a simple and cheap instrument that may be applied for investigating the role of visceral fat on health outcomes in epidemiological studies in patients with renal diseases. In a combined cohort composed by patients enrolled in the Atherosclerosis Risk in Communities (ARIC) and the Cardiovascular Health Study (CHS), a larger waist hip ratio was associated with a 22% risk excess for incident CKD and a 12% risk excess for a combined outcome composed by incident CKD and death [38]. In the same study, BMI appeared protective for the composite outcome but did not predict the risk for CKD. Likewise, in another study in the same cohort [39], a large waist hip ratio was associated with an increased risk of cardiac events while obesity, defined on the basis of BMI > 30 kg/m², did not predict these events. Overall these analyses indicate that, like in the general population, measures of abdominal fat accumulation maintain a direct association with the

risk for CKD, cardiovascular events and death. Thus testing the value of these metrics in ESRD appears to be of foremost importance. This may be problematic in patients treated with peritoneal dialysis where other options for risk stratification can be envisaged [40]. Overall, combining estimates of overall body size such as the BMI and of abdominal fat accumulation such as waist circumference may indeed refine the prognostic power of these measurements and produce interesting hypotheses for future clinical trials in ESRD patients. For example, does weight loss confer a health benefit in patients with a high BMI and a high waist circumference? Conversely, does a relatively large waist circumference in the face of a normal or low BMI identify patients at the highest risk of adverse clinical outcomes? Does the relationship between waist circumference and the waist hip ratio with biomarkers of inflammation observed in the general population and in patients with cardiovascular diseases hold true in ESRD and is this relationship modified by the BMI in these patients? In light of the pervasiveness of the obesity epidemics (as defined on the basis of the BMI) in ESRD, studying anthropometric measurements of visceral obesity as related to health outcomes in this population appears to be an absolute research priority.

The Burden of Kidney Failure

Each year in the United States, more than 100,000 people are diagnosed with kidney failure, a serious condition in which the kidneys fail to rid the body of wastes.¹ Kidney failure is the final stage of chronic kidney disease (CKD).

Diabetes is the most common cause of kidney failure, accounting for nearly 44 percent of new cases.¹ Even when diabetes is controlled, the disease can lead to CKD and kidney failure. Most people with diabetes do not develop CKD that is severe enough to progress to kidney failure. Nearly 24 million people in the United States have diabetes,² and nearly 180,000 people are living with kidney failure as a result of diabetes.¹

People with kidney failure undergo either dialysis, an artificial blood-cleaning process, or transplantation to receive a healthy kidney from a donor. Most U.S. citizens who develop kidney failure are eligible for federally funded care. In 2005, care for patients with kidney failure cost the United States nearly \$32 billion.¹

94

Source: United States Renal Data System. *USRDS 2007 Annual Data Report*.

African Americans, American Indians, and Hispanics/Latinos develop diabetes, CKD, and kidney failure at rates higher than Caucasians. Scientists have not been able to explain these higher rates. Nor can they explain fully the interplay of factors leading to kidney disease of diabetes—factors including heredity, diet, and other medical conditions, such as high blood pressure. They have found that high blood pressure and high levels of blood glucose increase the risk that a person with diabetes will progress to kidney failure.

The Course of Kidney Disease

Diabetic kidney disease takes many years to develop. In some people, the filtering function of the kidneys is actually higher than normal in the first few years of their diabetes.

Over several years, people who are developing kidney disease will have small amounts of the blood protein albumin begin to leak into their urine. This first stage of CKD is called microalbuminuria. The kidney's filtration function usually remains normal during this period.

As the disease progresses, more albumin leaks into the urine. This stage may be called macroalbuminuria or

proteinuria. As the amount of albumin in the urine increases, the kidneys' filtering function usually begins to drop. The body retains various wastes as filtration falls. As kidney damage develops, blood pressure often rises as well.

Overall, kidney damage rarely occurs in the first 10 years of diabetes, and usually 15 to 25 years will pass before kidney failure occurs. For people who live with diabetes for more than 25 years without any signs of kidney failure, the risk of ever developing it decreases.

[\[Top\]](#)

Diagnosis of CKD

People with diabetes should be screened regularly for kidney disease. The two key markers for kidney disease are eGFR and urine albumin.

- **eGFR.** eGFR stands for estimated glomerular filtration rate. Each kidney contains about 1 million tiny filters made up of blood vessels. These filters are called glomeruli. Kidney function can be checked by estimating how much blood the glomeruli filter in a minute. The calculation of eGFR is based on the amount of creatinine, a waste product, found in a blood sample. As the level of creatinine goes up, the eGFR goes down.

Kidney disease is present when eGFR is less than 60 milliliters per minute.

The American Diabetes Association (ADA) and the National Institutes of Health (NIH) recommend that eGFR be calculated from serum creatinine at least once a year in all people with diabetes.

- **Urine albumin.** Urine albumin is measured by comparing the amount of albumin to the amount of creatinine in a single urine sample. When the kidneys are healthy, the urine will contain large amounts of creatinine but almost no albumin. Even a small increase in the ratio of albumin to creatinine is a sign of kidney damage.

Kidney disease is present when urine contains more than 30 milligrams of albumin per gram of creatinine, with or without decreased eGFR.

The ADA and the NIH recommend annual assessment of urine albumin excretion to assess kidney damage in all people with type 2 diabetes and people who have had type 1 diabetes for 5 years or more.

If kidney disease is detected, it should be addressed as part of a comprehensive approach to the treatment of diabetes.

[\[Top\]](#)

Effects of High Blood Pressure

High blood pressure, or hypertension, is a major factor in the development of kidney problems in people with

96

diabetes. Both a family history of hypertension and the presence of hypertension appear to increase chances of developing kidney disease. Hypertension also accelerates the progress of kidney disease when it already exists.

Blood pressure is recorded using two numbers. The first number is called the systolic pressure, and it represents the pressure in the arteries as the heart beats. The second number is called the diastolic pressure, and it represents the pressure between heartbeats. In the past, hypertension was defined as blood pressure higher than 140/90, said as "140 over 90."

The ADA and the National Heart, Lung, and Blood Institute recommend that people with diabetes keep their blood pressure below 130/80.

Hypertension can be seen not only as a cause of kidney disease but also as a result of damage created by the disease. As kidney disease progresses, physical changes in the kidneys lead to increased blood pressure. Therefore, a dangerous spiral, involving rising blood pressure and factors that raise blood pressure, occurs. Early detection and treatment of even mild hypertension are essential for people with diabetes.

[\[Top\]](#)

Preventing and Slowing Kidney Disease

Blood Pressure Medicines

Scientists have made great progress in developing methods that slow the onset and progression of kidney disease in people with diabetes. Drugs used to lower blood pressure can slow the progression of kidney disease significantly. Two types of drugs, angiotensin-converting enzyme (ACE) inhibitors and angiotensin receptor blockers (ARBs), have proven effective in slowing the progression of kidney disease. Many people require two or more drugs to control their blood pressure. In addition to an ACE inhibitor or an ARB, a diuretic can also be useful. Beta blockers, calcium channel blockers, and other blood pressure drugs may also be needed.

An example of an effective ACE inhibitor is lisinopril (Prinivil, Zestril), which doctors commonly prescribe for treating kidney disease of diabetes. The benefits of lisinopril extend beyond its ability to lower blood pressure: it may directly protect the kidneys' glomeruli. ACE inhibitors have lowered proteinuria and slowed deterioration even in people with diabetes who did not have high blood pressure.

An example of an effective ARB is losartan (Cozaar), which has also been shown to protect kidney function and lower the risk of cardiovascular events.

Any medicine that helps patients achieve a blood pressure target of 130/80 or lower provides benefits. Patients with even mild hypertension or persistent microalbuminuria should consult a health care provider about the use of antihypertensive medicines.

Moderate-protein Diets

In people with diabetes, excessive consumption of protein may be harmful. Experts recommend that people with kidney disease of diabetes consume the recommended dietary allowance for protein, but avoid high-protein diets. For people with greatly reduced kidney function, a diet containing reduced amounts of protein may help delay the onset of kidney failure. Anyone following a reduced-protein diet should work with a dietitian to ensure

adequate nutrition.

Intensive Management of Blood Glucose

Antihypertensive drugs and low-protein diets can slow CKD. A third treatment, known as intensive management of blood glucose or glycemic control, has shown great promise for people with diabetes, especially for those in the early stages of CKD.

The human body normally converts food to glucose, the simple sugar that is the main source of energy for the body's cells. To enter cells, glucose needs the help of insulin, a hormone produced by the pancreas. When a person does not make enough insulin, or the body does not respond to the insulin that is present, the body cannot process glucose, and it builds up in the bloodstream. High levels of glucose in the blood lead to a diagnosis of diabetes.

Intensive management of blood glucose is a treatment regimen that aims to keep blood glucose levels close to normal. The regimen includes testing blood glucose frequently, administering insulin throughout the day on the basis of food intake and physical activity, following a diet and activity plan, and consulting a health care team regularly. Some people use an insulin pump to supply insulin throughout the day.

A number of studies have pointed to the beneficial effects of intensive management of blood glucose. In the Diabetes Control and Complications Trial supported by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), researchers found a 50 percent decrease in both development and progression of early diabetic kidney disease in participants who followed an intensive regimen for controlling blood glucose levels. The intensively managed patients had average blood glucose levels of 150 milligrams per deciliter—about 80 milligrams per deciliter lower than the levels observed in the conventionally managed patients. The United Kingdom Prospective Diabetes Study, conducted from 1976 to 1997, showed conclusively that, in people with improved blood glucose control, the risk of early kidney disease was reduced by a third. Additional studies conducted over the past decades have clearly established that any program resulting in sustained lowering of blood glucose levels will be beneficial to patients in the early stages of CKD.

[Top]

Dialysis and Transplantation

When people with diabetes experience kidney failure, they must undergo either dialysis or a kidney transplant. As recently as the 1970s, medical experts commonly excluded people with diabetes from dialysis and transplantation, in part because the experts felt damage caused by diabetes would offset benefits of the treatments. Today, because of better control of diabetes and improved rates of survival following treatment, doctors do not hesitate to offer dialysis and kidney transplantation to people with diabetes.

Currently, the survival of kidneys transplanted into people with diabetes is about the same as the survival of transplants in people without diabetes. Dialysis for people with diabetes also works well in the short run. Even so, people with diabetes who receive transplants or dialysis experience higher morbidity and mortality because of coexisting complications of diabetes—such as damage to the heart, eyes, and nerves.

Good Care Makes a Difference

People with diabetes should

- have their health care provider measure their A1C level at least twice a year. The test provides a weighted average of their blood glucose level for the previous 3 months. They should aim to keep it at less than 7 percent.
- work with their health care provider regarding insulin injections, medicines, meal planning, physical activity, and blood glucose monitoring.
- have their blood pressure checked several times a year. If blood pressure is high, they should follow their health care provider's plan for keeping it near normal levels. They should aim to keep it at less than 130/80.
- ask their health care provider whether they might benefit from taking an ACE inhibitor or ARB.
- ask their health care provider to measure their eGFR at least once a year to learn how well their kidneys are working.
- ask their health care provider to measure the amount of protein in their urine at least once a year to check for kidney damage.
- ask their health care provider whether they should reduce the amount of protein in their diet and ask for a referral to see a registered dietitian to help with meal planning.

[\[Top\]](#)

Points to Remember

- Diabetes is the leading cause of chronic kidney disease (CKD) and kidney failure in the United States.
- People with diabetes should be screened regularly for kidney disease. The two key markers for kidney disease are estimated glomerular filtration rate (eGFR) and urine albumin.
- Drugs used to lower blood pressure can slow the progression of kidney disease significantly. Two types of drugs, angiotensin-converting enzyme (ACE) inhibitors and angiotensin receptor blockers (ARBs), have proven effective in slowing the progression of kidney disease.
- In people with diabetes, excessive consumption of protein may be harmful.
- Intensive management of blood glucose has shown great promise for people with diabetes, especially for those in the early stages of CKD.

[\[Top\]](#)

Hope through Research

The number of people with diabetes is growing. As a result, the number of people with kidney failure caused by diabetes is also growing. Some experts predict that diabetes soon might account for half the cases of kidney failure. In light of the increasing illness and death related to diabetes and kidney failure, patients, researchers, and health care professionals will continue to benefit by addressing the relationship between the two diseases. The NIDDK is a leader in supporting research in this area.

Several areas of research supported by the NIDDK hold great potential. Discovery of ways to predict who will develop kidney disease may lead to greater prevention, as people with diabetes who learn they are at risk

99

institute strategies such as intensive management of blood glucose and blood pressure control.

Participants in clinical trials can play a more active role in their own health care, gain access to new research treatments before they are widely available, and help others by contributing to medical research. For information about current studies, visit www.ClinicalTrials.gov.

The National Kidney and Urologic Diseases Information Clearinghouse (NKUDIC) is a service of the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK). The NIDDK is part of the National Institutes of Health of the U.S. Department of Health and Human Services. Established in 1987, the Clearinghouse provides information about diseases of the kidneys and urologic system to people with kidney and urologic disorders and to their families, health care professionals, and the public. The NKUDIC answers inquiries, develops and distributes publications, and works closely with professional and patient organizations and Government agencies to coordinate resources about kidney and urologic diseases.

Publications produced by the Clearinghouse are carefully reviewed by both NIDDK scientists and outside experts.

CHRONIC KIDNEY DISEASE IN UNITED STATES HISPANICS: A GROWING PUBLIC HEALTH PROBLEM

Hispanics are the fastest growing minority group in the United States. The incidence of end-stage renal disease (ESRD) in Hispanics is higher than non-Hispanic Whites and Hispanics with chronic kidney disease (CKD) are at increased risk for kidney failure. Likely contributing factors to this burden of disease include diabetes and metabolic syndrome, both are common among Hispanics. Access to health care, quality of care, and barriers due to language, health literacy and acculturation may also play a role. Despite the importance of this public health problem, only limited data exist about Hispanics with CKD. We review the epidemiology of CKD in US Hispanics, identify the factors that may be responsible for this growing health problem, and suggest gaps in our understanding which are suitable for future investigation. *Ethn Dis* 2009;19:466-472

INTRODUCTION

Between 2004 and 2005, the number of Hispanic in the United States grew by 3.6 percent to reach a total of 42.7 million (representing nearly 15% of the total US population), making this the fastest growing segment of the population in the country.¹ A large increase has also occurred in the Hispanic end stage renal disease (ESRD) population. According to United States Renal Data System (USRDS), in 2005, there were 12,000 new cases of ESRD treated with dialysis or transplant in Hispanics, representing an increase of 63% since 1996. Hispanics have an incidence rate of ESRD which is 1.5 times greater than for non-Hispanics Whites.² This increase in ESRD cases not only translates into an increased burden to our health care system, but also emphasizes the importance of better understanding risk factors for chronic kidney disease (CKD) in Hispanics. In this review, we examine the epidemiology of CKD in US Hispanics, explore potential reasons for this growing public health problem, and highlight potential areas for future research.

METHODS

We performed a qualitative review of the literature utilizing a PubMed search for the following keywords: chronic kidney disease, Hispanics, Latinos, end stage renal disease, diabetes, dialysis, transplantation, and health care disparities. In addition, we reviewed data from the USRDS^{2,3} and the Organ Procurement and Transplantation Network.⁴ For the purpose of this review, the term Hispanic ethnicity refers to all

*Hispanics have an incidence rate of ESRD which is 1.5 times greater than for non-Hispanics Whites.*²

persons of Latin American origin living in the United States, unless indicated otherwise. Hispanics are culturally, socioeconomically, and genetically heterogeneous and represent a wide variety of national origins and social classes.⁵ In terms of ancestry, US Hispanics originate from three populations: European settlers, Native Americans, and West Africans. The breakdown for the US Hispanic population is as follows: 64% Mexican, 9% Puerto Rican, 3.5% Salvadoran and 2.7% Dominican.¹ The remainder is of Central American, South American or other Hispanic or Latino origin.

EPIDEMIOLOGY OF CKD IN HISPANICS

Glomerular filtration rate (GFR) estimating equations have been used to determine the prevalence of CKD in the United States. The abbreviated Modification of Diet in Renal Disease (MDRD) equation has been considered to be the most accurate available estimating equation for GFR and has been used widely in the literature and by a growing number of clinical laboratories.⁶ Though the equation has been demonstrated to have validity across a spectrum of different subgroups,⁷ there are no data regarding its validity in

Hispanics. This is a relevant concern because the serum creatinine concentration, which is used in the MDRD equation to calculate estimated GFR (eGFR), has been demonstrated to differ by racial/ethnic groups. In an analysis of serum creatinine levels in the National Health and Nutrition Examination Survey (NHANES) III, Mexican Americans had lower mean serum creatinine levels than non-Hispanic Whites or non-Hispanic Blacks.⁸ The reasons for these differences are unknown. Similarly, a recent NHANES analysis of serum cystatin C, a potentially more sensitive marker of early kidney dysfunction than serum creatinine, reported lower levels of cystatin C in Mexican Americans compared with other racial/ethnic groups studied.⁹ These differences in the distribution of serum creatinine and cystatin C levels in Hispanics reinforce the importance of rigorously evaluating the accuracy of GFR estimating equations in Hispanics.¹⁰

INCIDENCE AND PREVALENCE OF CKD IN HISPANICS

Mild to Moderate CKD

Information regarding earlier stages of CKD in Hispanics is limited. Several investigators have reported a higher prevalence of microalbuminuria in Hispanics compared with non-Hispanic Whites.¹¹⁻¹³ In contrast to these findings, a recent analysis of NHANES III data suggests that the prevalence of CKD may be lower in Mexican Americans than in non-Hispanic Whites or non-Hispanic Blacks. In an analysis of NHANES III, moderately decreased kidney function (eGFR 30-59 mL/minute/1.73 m²) was most prevalent among non-Hispanic Whites (4.8%) and non-Hispanic Blacks (3.1%) and least prevalent in Mexican Americans (1.0%).¹⁴ Between NHANES 1988 to 1994 and 1994 to 2004, the prevalence of CKD rose among Mexican Americans but

continued to be lower than that observed in non-Hispanic Whites and Blacks.¹⁵

These data are not consistent with the higher prevalence rates of ESRD in Hispanics. One potential explanation is that Hispanics have a higher risk of ESRD because of more rapid progression of CKD after its onset, rather than simply a larger pool of individuals with CKD. The findings could also be related to methodological issues related to the sample size or sampling bias. Furthermore, as discussed earlier, the validity of the MDRD equation has not been established in Hispanics and utilizing the equation in Hispanics could be an important potential source of error. Lastly, NHANES includes only Mexican Americans and these findings may not be generalizable to other Hispanic subgroups.

End Stage Renal Disease (ESRD)

It is well established that Hispanics have a higher prevalence of ESRD than non-Hispanic Whites. The increased prevalence of treated ESRD in Hispanics was first recognized in the 1980s. Using data from the state of Texas, Mexican Americans were found to have an excess of ESRD compared with non-Hispanic Whites with an incidence ratio of 3.¹⁶ For diabetic ESRD, Mexican Americans had an incidence ratio of 6 compared with non-Hispanic Whites. The first study at a national level analyzed male Hispanics identified in Medicare ESRD program data files. Using common Spanish surnames to identify cases, it was found that Hispanics developed ESRD at a younger age than non-Hispanic Whites; and between 1980 and 1990, ESRD incidence rates increased more for Hispanics.¹⁷ In 1995, the USRDS began to acquire data regarding Hispanic ethnicity. In 2006, the adjusted incidence rate for ESRD in Hispanics was 1.5 times higher than for non-Hispanic Whites.² Furthermore, between 1996 and 2005, the incidence rate for Hispanics in-

Table 1. Leading causes of ESRD requiring dialysis in Hispanics and non-Hispanic Whites in 2000³

Primary disease	Hispanics	Non-Hispanic Whites
Diabetes	58.8%	38.8%
Hypertension/large vessel disease	16.2%	23.7%
Glomerulonephritis	9.1%	9.9%
Etiology uncertain	3.5%	4.0%
Other	12.4%	23.6%

creased by 63%.² In contrast, Burrows et al examined trends in age-adjusted ESRD rates and reported that the age-adjusted ESRD rate in Hispanics decreased by approximately 15%, from 2000 to 2005 (530.2 vs 448.9).¹⁸ However, there was an overall increase in the age-adjusted incidence rates in Hispanics in 2005 as compared with 1995 (448.9 vs 395.0). It is apparent that a longer period of follow-up time is needed to better characterize trends. The leading causes of ESRD requiring dialysis in Hispanics and non-Hispanic Whites are described in Table 1. Diabetes accounts for 59% of prevalent cases of ESRD in Hispanic compared with 39% of cases in non-Hispanic Whites.³ Unfortunately, data regarding causes of ESRD by Hispanic subgroup are not available.

The incidence and severity of diabetes are important factors in the excessive incidence of diabetic ESRD observed in Hispanics. The prevalence of diabetes in Hispanics has been estimated to be approximately 1.5 to 3 times that seen in the non-Hispanic White population and its incidence is rising.¹⁹ Moreover, Hispanics have been found to have lower rates of glucose self-monitoring and poorer glycemic control compared with non-Hispanic Whites.²⁰ Hispanics with diabetes may be at increased risk to develop diabetic nephropathy. Mexican American diabetics in San Antonio, Texas had a higher prevalence of proteinuria than non-Hispanic White diabetics from Wisconsin.²¹ However,

104

no such difference was observed in the San Luis Valley.²² The importance of non-diabetic CKD in Hispanics is not completely understood. Though hypertension is less prevalent in Hispanics, Mexican Americans had the highest rate of uncontrolled hypertension in NHANES III.²³ Data from Texas and the USRDS demonstrate a higher incidence of ESRD due to hypertension in Hispanics than in non-Hispanic Whites.^{16,24}

Progression of CKD in Hispanics

Only limited information is available regarding progression rates and risk factors for CKD in Hispanics. In a multivariable retrospective analysis of a cohort of 263 type 2 diabetic ESRD patients, Mexican ethnicity and female sex were found to hasten the decline of renal function.²⁵ A post hoc analysis of the Reduction of Endpoints in NIDDM with the Angiotensin II Antagonist Losartan Study (RENAAL) found that Hispanics had the highest risk for ESRD compared with Blacks and Whites.²⁶ However, the majority of Hispanics in this study were from Latin American countries and therefore, the findings may not be applicable to US Hispanics. A recent analysis of patients enrolled in Kaiser Permanente of Northern California, a large integrated healthcare delivery system, has clarified the risk of ESRD in US Hispanics with CKD.²⁷ In 39,550 patients with stage 3 to 4 CKD, Hispanic ethnicity was associated with almost a two-fold increased risk for ESRD when compared with non-Hispanic Whites. This increased risk was attenuated to 33% after adjustment for diabetes, medication use, and other characteristics. Thus, the risk for progression to ESRD in Hispanics is only partially explained by diabetes.

Even less is known about progression rates and risk factors for non-diabetic CKD in Hispanics. Some reports suggest that certain glomerular diseases may be more severe and

progress more often in Hispanics than in non-Hispanic Whites.²⁸⁻³⁰ In a recent examination of rates of progression in 128 patients with proliferative lupus nephritis, Barr et al. found that Hispanic ethnicity was independently associated with progression of CKD.³⁰ Another study examining patients with lupus found that Texan-Hispanic ethnicity was more likely to be associated with nephritis than Puerto Rican ethnicity.³¹ This suggests that outcomes can vary by Hispanic subgroup.

US Hispanics have been poorly represented in large prospective CKD studies. The ongoing NIDDK-sponsored Hispanic Chronic Renal Insufficiency Cohort Study (HCRIC) is investigating risk factors for CKD and cardiovascular disease (CVD) progression in a cohort of 326 Hispanics with CKD. This study is based at the University of Illinois at Chicago and is an ancillary study to the NIDDK-sponsored CRIC Study.³²

Metabolic Syndrome and CKD

Recent analyses of NHANES III data found that metabolic syndrome affects over 47 million Americans and that the problem is more pronounced in Hispanics.^{33,34} Mexican Americans have the highest age-adjusted prevalence of metabolic syndrome (31.9%) compared with non-Hispanic Whites (23.8%) and Blacks (21.6%).³³ There is now emerging evidence supporting a relationship between metabolic syndrome and CKD.³⁵⁻³⁸ In a prospective cohort study of Native Americans without diabetes, metabolic syndrome was associated with an increased risk for developing CKD.³⁹ In non-diabetic subjects with normal kidney function enrolled in the Atherosclerosis Risk in Communities Study (ARIC), investigators found an adjusted odds ratio of developing CKD in participants with metabolic syndrome of 1.43 compared with participants who did not have the syndrome.³⁸ These data suggest that metabolic syndrome could be an important factor in the Hispanic CKD population.

DISPARITIES IN HEALTH CARE AND PREVALENCE AND PROGRESSION OF CKD

The importance of healthcare disparities in CKD has received increased recognition,⁴⁰ but little is known regarding the impact of healthcare disparities on health outcomes in Hispanics with CKD. It is well substantiated that there are considerable disparities in health care for Hispanics.²⁰ According to a report by the Commonwealth Fund, nearly two-thirds (65%) of working-age Hispanics with low incomes were uninsured for all or part of the year in 2000.⁴¹ Using NHANES III data, Harris evaluated healthcare access and utilization, and health status and outcomes for patients with type 2 diabetes.²⁰ Mexican Americans below age 65 years had lower rates of health insurance coverage than non-Hispanic Whites and Blacks (66% vs 91% and 89%, respectively). Furthermore, Mexican Americans with private insurance or a high school education or more were more likely to have normoalbuminuria.²⁰ The quality of care received by Hispanics may also play a role in the progression of kidney disease. Hispanics with diabetes are less likely to report having had a foot exam or glycosylated hemoglobin testing.⁴² As noted earlier, Mexican American in NHANES III had the highest rate of uncontrolled hypertension.²³ Lastly, Ifudu et al reported that non-Whites, including Hispanics, are more likely to receive a late referral to a nephrologist for CKD management.⁴³ This study was limited by the low number of Hispanics in the analysis. These findings suggest that quality of care may play a role in the high prevalence of ESRD in this population.

Patient-centered factors may play a particularly important role for Hispanics include language, health care literacy, acculturation, social support, and trust in healthcare providers. Hispanics who are recent immigrants face a number of potential barriers to health care, includ-

106

ing lack of familiarity with the health-care system and language barriers. Spanish-speaking Hispanics are less likely to be insured, have access to care and use preventive health services.^{41,46} Trust in the healthcare system is another important factor because it has been found to be significantly related to adherence.⁴⁵ Doescher et al found that Hispanics reported significantly less trust in their physician than non-Hispanic Whites.⁴⁶ Finally, social support, defined as resources provided by a network of individuals or social groups, has been found to have direct effects on health status and health service utilization.⁴⁷ There have been no published studies to date focusing on patient-centered factors in Hispanics with CKD. However, it seems reasonable to speculate that these factors amplify CKD and associated CVD risk.

CARDIOVASCULAR DISEASE IN HISPANICS WITH ESRD AND EARLIER STAGES OF CKD

Several studies have found that Hispanics may have lower all-cause and CV mortality rates than non-Hispanic Whites.⁴⁸⁻⁵⁰ The term, Hispanic paradox, has been used to describe the lower than expected mortality rates despite the increased incidence of diabetes and obesity, lower socioeconomic status, and barriers to health care.⁵¹ A number of explanations have been proposed, including socio-cultural factors, ethnic misclassification, incomplete ascertainment of deaths, and the healthy migrant effect.^{36,52} In the ESRD population, Hispanics, Blacks, and Asians have a lower risk of death than non-Hispanic Whites, regardless of diabetes status.^{24,53-55} In a recent analysis of a national, random sample of hemodialysis patients, Hispanics had an adjusted 12-month mortality risk that was 25% lower than non-Hispanic Whites.⁵³ The reasons for the lower

ESRD mortality rates are not completely understood, but differences in survival have been noted among Hispanic subgroups with Mexican-Americans, Cuban Americans and Hispanic-other having an increased survival advantage compared with Puerto Rican Americans.⁵⁶ These findings suggest that sociocultural or genetic differences may play a role in these lower ESRD mortality rates and demonstrating the importance of examining health outcomes in subgroups of Hispanics.

Less is known regarding CVD risk and disease in Hispanics with earlier stages of CKD. An analysis of mortality rates of adults with CKD in NHANES found no difference in CVD or all-cause mortality in Mexican Americans compared with non-Hispanic whites.⁵⁷ In contrast, Hispanic veterans with diabetic CKD experienced a lower 18-month mortality rate than non-Hispanic Whites.⁵⁸ Though Hispanics in Kaiser Permanente of Northern California had an increased rate of ESRD, Hispanic ethnicity was associated with 29% lower adjusted mortality rate and 19% lower adjusted rate of CVD events as compared with non-Hispanic Whites, even after accounting for major cardiovascular risk factors, comorbidities and use of preventative therapies.²⁷ Again, the reasons for these differences are not known.

END-STAGE RENAL DISEASE CARE IN US HISPANICS

Dialysis

Analysis of USRDS data reveals that Hispanics are 1.47 times more likely than non-Hispanic Whites to have late initiation of dialysis.⁵⁹ At the start of dialysis, Hispanics tend to have slightly lower hematocrit levels and are 13% less likely to be on erythropoiesis stimulating agents compared with non-Hispanic Whites.⁶⁰ An analysis of a random sample of Medicare eligible adults on hemodialysis in 1997 revealed that, compared with non-Hispanic Whites,

Hispanics on hemodialysis are more likely to be female, younger, and have diabetes.⁶¹ Hispanics tend to have higher albumin levels and similar hematocrit levels compared to non-Hispanic Whites.^{53,61,62}

Little is known about ESRD care in the United State for unauthorized immigrants. Of the 11.8 million unauthorized immigrants in the United States, more than 8.46 million are Hispanic.⁶³ The incidence rate for ESRD for this population is unknown. Many of these undocumented aliens do not receive systematic care before initiation of dialysis. The quality and availability of pre-ESRD care for unauthorized immigrants has not been systematically studied. A small study of undocumented ESRD patients initiating dialysis in New York City found that these patients had higher serum creatinine concentration and lower eGFR, higher systolic blood pressure, and greater costs for the hospitalization associated with the initiation of dialysis.⁶⁴ However, a limitation of this study was that it only included 33 Hispanics. An important issue regarding the dialysis of unauthorized immigrants is the compensation for dialysis, which varies by individual state and may limit the availability of long-term dialysis for undocumented aliens who are then forced to receive dialysis on an emergent basis only.⁶⁵ The cost of care for undocumented ESRD patients receiving dialysis on an emergent basis is 3.7 times higher than for those unauthorized immigrants receiving long-term maintenance dialysis.⁶⁶ End-stage renal disease in unauthorized immigrants is of great public health and economic concern and warrants future research and re-evaluation of current policies.

Transplantation

Limited data exist that suggest that Hispanics are equally likely to be referred for renal transplantation but are less likely to progress beyond the early stages of the transplant evaluation

with some of the reasons including financial concerns, fear of the surgery, and preference for dialysis.⁶⁷ Perhaps for this reason, Hispanics are underrepresented on kidney waiting lists relative to the prevalence of CKD in this population.⁶⁸ Once placed on the transplant wait list, Hispanics have a longer unadjusted median time to transplant than non-Hispanic Whites.⁴ Factors that potentially contribute to the longer time on the wait list include lower rates of organ donations in Hispanics relative to Whites,^{69,70} less knowledge and more fear-related barriers to living organ donation,⁷¹ and ethnic differences in the frequency of HLA alleles coupled with current allocation policies.⁷² Data regarding graft survival in Hispanics have not been uniform, with some studies suggesting that Hispanics and non-Hispanic Whites have similar rates of graft survival,^{73,74} while other studies have demonstrated poorer rates of graft survival in Hispanics.⁷⁵ More recently, Gordon et al found better patient and graft survival in Hispanics compared with non-Hispanics.⁷⁶ Further studies are needed to clarify whether Hispanic ethnicity influences post-transplant outcomes. In addition, policies are needed to address specific barriers within the transplant evaluation process for Hispanics to ensure appropriate access to this important therapy.

Compared with non-Hispanics Whites, Hispanics have an increased incidence of ESRD that appears independent of known clinical risk factors.

CONCLUSION

Chronic kidney disease is a growing and under-recognized health problem for US Hispanics. Compared with non-Hispanics Whites, Hispanics have an increased incidence of ESRD that appears independent of known clinical risk factors. Furthermore, among patients starting at the same level of CKD, Hispanics are at increased risk for progression to ESRD. Interestingly, data from NHANES suggest that the prevalence of CKD with decreased eGFR, at least in Mexican Americans, is lower than in non-Hispanic Whites. The reason for this discrepancy is unclear but could be related to more rapid progression of CKD. Many questions remain unanswered including: factors influencing CKD progression and CVD outcomes; the validity of current GFR estimating equations; insights into differences in outcomes among Hispanic subgroups; and the impact of health care disparities on CKD. For these reasons, future research is needed to better understand the epidemiology and complications of CKD in US Hispanics. Furthermore, it is essential that adequate numbers of US Hispanics are included in future interventional trials to provide the necessary evidence base to guide prevention and therapeutic strategies for CKD and ESRD.

Section III, Project Purpose, Background and Alternatives – Information Requirements
Criterion 1110.230(c), Project Purpose, Background and Alternatives

Alternatives

The Applicants explored several options prior to determining to relocate and expand Logan Square Dialysis. After exploring the options below in detail, the Applicants determined to relocate and expand its capacity in order to meet rising demand. A review of each of the options considered and the reasons they were rejected follows.

Do Nothing

This is not a viable option. As stated in Attachment – 12, the Existing Facility is insufficient to meet demand. For several years, the facility has operated near 100% utilization and is currently operating at 98.33%. Although physicians typically press the facility to accommodate their sickest and most frail patients during the first and second shifts, it is often difficult for a patient to schedule dialysis during these optimal shifts when facilities are operating at 80% utilization. This requires patients to depart the facility in the dark. Patients, many of whom rely on assistive devices, such as canes and walkers, are faced with additional safety hazards when arriving and departing the facility in the dark. Notably, the City of Chicago has a higher crime rate than other parts of the State and both staff and patients are more vulnerable to becoming crime victims outside the facility during evening and night hours.

Furthermore, the Existing Facility is dilapidated, in disrepair, has insufficient space, and no option for expansion. Maintenance costs have exceeded tolerable levels, the facility is aging, and the floors require constant replacement. There is limited space to drop off patients, and insufficient parking for patients and staff, as patients must utilize inconvenient metered parking on the street. Finally, physician staff has even expressed concern that the space at Existing Facility's is insufficient to meet community standards. Relocation of the Existing Facility will ensure that patients receive access to modern, high quality dialysis treatment, primarily during the day.

Utilize Existing Facilities

Currently, the Existing Facility serves 121 ESRD patients. Dr. Kap Joon No, the Medical Director for Logan Square Dialysis, anticipates all 121 current patients will transfer to the Replacement Facility. Dr. No also identifies 38 Stage 4 and 5 Stage 5 CKD patients that would likely be referred to the Replacement Facility. See Attachment – 12A. Based upon a 35% attrition rate due to patient death, transplant, or return of function, it is projected that 27 of the patients will require dialysis within the next 12 to 18 months. Thus, the approximately 148 patients will be referred to the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard. The relocation of Logan Square Dialysis is necessary to meet the dialysis needs of these patients, will allow for safer and more convenient treatment times for patients, and will also help meet the 124-station need in the service area.

There is no capital cost with this alternative, however, if the project is delayed, the Applicants will be subject to penalties and costs relating to holding over in the space after lease termination.

Relocate and Expand Logan Square Dialysis

DaVita determined that the most effective and efficient way to serve its patients and address the need for more stations in HSA 6 is to relocate and expand the existing facility. The proposed site for the Replacement Facility is just located just 0.4 miles from the current site, and will adequately serve Logan Square Dialysis' current and projected patient-base. Thus, the Applicants selected this option.

The cost associated with this option is \$4,781,539.

**Table 1110.230(c)
Alternatives to Proposed Project
Cost Benefit Analysis**

Alternative	Community Need	Access	Capital Cost	Status
Do Nothing	Not Met	Decreased	\$0	Reject
Utilize Existing Facilities	Not Met	Decreased	\$0	Reject
Establish New Facility	Met	Increased	\$4,781,539	Accept

111

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(a), Size of the Project

The Applicants propose to relocate an existing dialysis facility. Pursuant to Section 1110, Appendix B of the HFSRB's rules, the State standard is 450-650 gross square feet per dialysis station for a total of 12,600 to 18,200 gross square feet for 28 dialysis stations. The total gross square footage of the proposed dialysis facility is 9,100 gross square feet. Accordingly, the proposed facility meets the State standard.

SIZE OF PROJECT				
DEPARTMENT/SERVICE	PROPOSED BGSF/DGSF	STATE STANDARD	DIFFERENCE	MET STANDARD?
ESRD	9,100	12,600 - 18,200	3,500	Below State Standard

112

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(b), Project Services Utilization

By the second year of operation, the proposed facility's annual utilization shall exceed HFSRB's utilization standard of 80%. Pursuant to Section 1100.1430 of the HFSRB's rules, facilities providing in-center hemodialysis should operate their dialysis stations at or above an annual utilization rate of 80%, assuming three patient shifts per day per dialysis station, operating six days per week.

Dr. No projects that he will refer 121 patients currently receiving treatment at the Existing Facility and will continue treatment at the Replacement Facility. Dr. No also identifies 27 CKD patients that would likely be referred to the Replacement Facility. See Attachment – 15A. Thus, approximately 148 patients will be referred to the Replacement Facility within 12 to 18 months. This represents a utilization of 88% by the second year following project completion.

Table 1110.234(b)					
Utilization					
	Dept./ Service	Historical Utilization (Treatments)	Projected Utilization	State Standard	Met Standard?
2009	ESRD	15,657	N/A	14,976	Yes
2010	ESRD	15,779	N/A	14,976	Yes
2011 (Annualized)	ESRD	16,717	N/A	14,976	Yes
2012	ESRD	N/A	23,088	20,967	Yes
2013	ESRD	N/A	23,088	20,967	Yes

Dale Galassie
Chair
Illinois Health Facilities and Services Review Board
525 West Jefferson Street, 2nd Floor
Springfield, Illinois 62761

Dear Chairman Galassie:

I am the medical director for Logan Square Dialysis. I am writing in support of DaVita's proposed relocation and expansion of Logan Square Dialysis. DaVita proposes to discontinue its existing 20-station dialysis facility located at 2659 North Milwaukee Avenue, Chicago, Illinois and establish a new 28-station dialysis facility to be located at 2816 North Kimball Avenue, Chicago, Illinois. The existing facility cannot adequately serve the needs of current and future patients. It is an aging facility in constant need of repair, has insufficient space to accommodate the growing number of ESRD patients, and cannot be expanded. Utilization at the existing facility consistently operates significantly above the State's 80% utilization standard, making it difficult for patients to schedule their dialysis at optimal times. Logan Square is a diverse neighborhood with a large Hispanic population. Importantly, the incidence of ESRD in the Hispanic community is 1.5 times greater than in the general population. A new 28-station dialysis facility will improve access and ensure that patients in the Logan Square neighborhood receive access to modern, high quality dialysis treatment.

Logan Square Dialysis is currently treating 121 ESRD patients. A list of current patients by initials and zip code is attached at Attachment 1. Over the past three years I have referred 65 ESRD patients for dialysis: 15 patients in 2009, 26 ESRD patients in 2010, and 24 ESRD patients in 2011. The total number of patients treated by facility and zip code of residence for the most recent three years as reported to The Renal Network is attached hereto at Attachment 2.

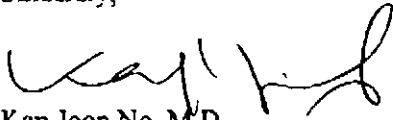

Additionally, I am currently treating 38 stage 4 and 5 Stage 5 pre-ESRD patients that reside in and around Logan Square. I conservatively estimate 27 patients will be referred to Logan Square Dialysis within the next 12 to 18 months. A list of these pre-ESRD patients by initials and zip code is attached hereto as Attachment 3.

These patient referrals have not been used to support another pending or approved certificate of need application.

The information in this letter is true and correct to the best of my knowledge.

I support the proposed relocation of Logan Square Dialysis.

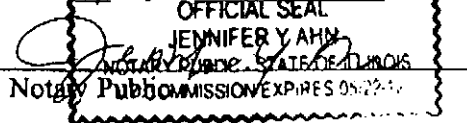

Sincerely,

Kap Joon No, M.D.

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(c), Unfinished or Shell Space

This project will not include unfinished space designed to meet an anticipated future demand for service. Accordingly, this criterion is not applicable.

121

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(d), Assurances

This project will not include unfinished space designed to meet an anticipated future demand for service. Accordingly, this criterion is not applicable.

122

**Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(b), Planning Area Need**

1. Planning Area Need

There is a need for 124 stations in HSA 6. The Applicants propose to discontinue the existing 20-station dialysis facility located at 2659 North Milwaukee Avenue, Chicago, Illinois 60647 and relocate it with 28-stations to 2816 N. Kimball Avenue, Chicago, IL 60618. The existing site does not have sufficient capacity to meet demand. For several years, the facility operated near 100% utilization and is currently operating at 98%. Although physicians typically press the facility to accommodate their sickest and most frail patients during the first and second shifts, it is often difficult for a patient to schedule dialysis during these optimal shifts when facilities are operating at 80% utilization. This requires patients to depart the facility in the dark. Patients, many of whom rely on assistive devices, such as canes and walkers, are faced with additional safety hazards when arriving and departing the facility in the dark. While operating a fourth shift at any location is undesirable, the City of Chicago has a higher crime rate than other parts of the State and both staff and patients are more vulnerable to becoming crime victims outside the facility during evening and night hours. Having 28 stations will accommodate 112 patients with a typical three shift model. Thus, relocation of the current facility will ensure that patients receive access to modern, high quality dialysis treatment at optimal times during the day.

Furthermore, the Existing Facility is old and has insufficient space, and no option for expansion. The facility occupies two floors, which is not a desirable layout. Maintenance costs have exceeded normal levels, the facility is aging, and the floors require constant replacement. There is limited space to drop off patients, and insufficient parking for patients and staff, as patients must utilize inconvenient metered parking on the street. Finally, medical staff has expressed concern that the space at the Existing Facility is insufficient to meet community standards. As such, Logan Square Dialysis must relocate and add 8 stations. The proposed location is just 0.4 miles from the Existing Facility, so the facility will continue to serve its current patients and meet rising demand in its GSA.

Currently, the Existing Facility serves 121 ESRD patients. Dr. Kap Joon No, the primary referring anticipates all 121 current patients will transfer to the Replacement Facility. Dr. No also identifies 38 Stage 4 and 5 Stage 5 CKD patients that would likely be referred to the Replacement Facility. See Attachment – 26A. Taking attrition into account, due to patient death, transplant, or return of function, it is projected that 27 of the patients will require dialysis within the next 12 to 18 months. Thus, the approximately 148 patients will be referred to the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

The relocation of Logan Square Dialysis is necessary to meet the dialysis needs of these patients, will allow for safer and more convenient treatment times for patients, and will also help meet the 124-station need in the service area. See Attachment – 26A.

2. Service to Planning Area Residents

The primary purpose is to ensure the residents of Logan Square have access to life sustaining dialysis. As evidenced in the Table 1110.1430(b)(3)(B), 121 of 121 current patients live in the service area. 35 of 43 pre-ESRD patients also live in the area.

Total	121

3. Service Demand – Establishment of In-Center Hemodialysis Service

The facility's medical director anticipates all 121 current patients will transfer to the Replacement Facility and also identifies 38 Stage 4 and 5 Stage 5 CKD patients that would likely be referred to the Replacement Facility. See Attachment – 26A. After adjusting for attrition, it is projected that 27 of the patients will require dialysis within the next 12 to 18 months. Thus, the approximately 148 patients will be referred to the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

4. Service Demand – Expansion of In-Center Hemodialysis Service

Logan Square Dialysis' current utilization is 98%, and the facility has been operating over 100% capacity for the last year. As shown in the referral letter at Attachment – 26A, Dr. No projects that he will refer a total of 121 current patients and 27 CKD patients to the facility within the next 12 to 18 months, which results in an 88% utilization rate by the end of the second year of operation. Thus, expansion of the Existing Facility is needed to meet rising demand.

5. Service Accessibility

As set forth throughout this application, the proposed relocation is needed to maintain access to life-sustaining dialysis for residents of the Logan Square neighborhood who have ESRD. The relocation is necessary to provide essential care to Logan Square patients, as the Existing Facility has insufficient space to meet demand. Logan Square Dialysis is operating at 98% utilization and the average utilization of existing facilities in the GSA is 73%. Moreover, HFSRB currently identifies a need for 124 dialysis stations in HSA 6. As such, the expanded Replacement Facility will better accommodate current and future demand for dialysis services and ensure dialysis services are accessible to residents of the Logan Square neighborhood.

Dear Chairman Galassie:

I am the medical director for Logan Square Dialysis. I am writing in support of DaVita's proposed relocation and expansion of Logan Square Dialysis. DaVita proposes to discontinue its existing 20-station dialysis facility located at 2659 North Milwaukee Avenue, Chicago, Illinois and establish a new 28-station dialysis facility to be located at 2816 North Kimball Avenue, Chicago, Illinois. The existing facility cannot adequately serve the needs of current and future patients. It is an aging facility in constant need of repair, has insufficient space to accommodate the growing number of ESRD patients, and cannot be expanded. Utilization at the existing facility consistently operates significantly above the State's 80% utilization standard, making it difficult for patients to schedule their dialysis at optimal times. Logan Square is a diverse neighborhood with a large Hispanic population. Importantly, the incidence of ESRD in the Hispanic community is 1.5 times greater than in the general population. A new 28-station dialysis facility will improve access and ensure that patients in the Logan Square neighborhood receive access to modern, high quality dialysis treatment.

Logan Square Dialysis is currently treating 121 ESRD patients. A list of current patients by initials and zip code is attached at Attachment 1. Over the past three years I have referred 65 ESRD patients for dialysis: 15 patients in 2009, 26 ESRD patients in 2010, and 24 ESRD patients in 2011. The total number of patients treated by facility and zip code of residence for the most recent three years as reported to The Renal Network is attached hereto at Attachment 2.

Additionally, I am currently treating 38 stage 4 and 5 Stage 5 pre-ESRD patients that reside in and around Logan Square. I conservatively estimate 27 patients will be referred to Logan Square Dialysis within the next 12 to 18 months. A list of these pre-ESRD patients by initials and zip code is attached hereto as Attachment 3.

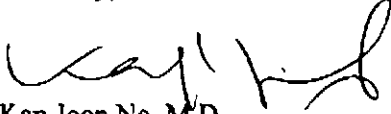

These patient referrals have not been used to support another pending or approved certificate of need application.

The information in this letter is true and correct to the best of my knowledge.

Attachment - 26A

I support the proposed relocation of Logan Square Dialysis.

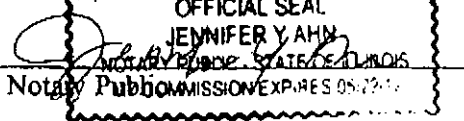

Sincerely,

Kap Joon No, M.D.

- b. A list of existing and approved dialysis facilities located within 30 minutes normal travel time of the proposed dialysis facility is provided at Attachment – 26C.

2. Maldistribution of Services

The proposed dialysis facility will not result in a maldistribution of services. A maldistribution exists when an identified area has an excess supply of facilities, stations, and services characterized by such factors as, but not limited to: (1) ratio of stations to population exceeds one and one-half times the State Average; (2) historical utilization for existing facilities and services is below the State Board's utilization standard; or (3) insufficient population to provide the volume or caseload necessary to utilize the services proposed by the project at or above utilization standards. As discussed more fully below, the ratio of stations to population in the geographic service area is 109% of the State average, the average utilization of dialysis facilities within the GSA is 73%, and sufficient population exists to achieve target utilization. Accordingly, the proposed dialysis facility will not result in a maldistribution of services.

a. Ratio of Stations to Population

As shown in Table 1110.1430(c)(2)(A), the ratio of stations to population is 109% of the State Average.

Table 1110.1430(c)(2)(A)				
Ratio of Stations to Population				
	Population	Dialysis Stations	Stations to Population	Standard Met?
Geographic Service Area	4,064,266	1,292	1:3,145	Yes
State	12,830,632	3,731	1:3,439	

b. Historic Utilization of Existing Facilities

For the last year, the Existing Facility has operated near 100% utilization and there is a need for 124 dialysis stations in the City of Chicago. Additionally, the average utilization in the GSA is 73%. Accordingly, there is sufficient patient population to justify the need for the Replacement Facility. There will be no maldistribution of services. Additional stations are necessary to adequately meet rising demand and a need of 124 additional dialysis stations, as identified by the HFSRB Inventory.

c. Sufficient Population to Achieve Target Utilization

The Applicants propose to replace their existing 20-station facility with a 28-station facility at a nearby location. The Existing Facility currently treats 121 patients. To achieve the State Board's 80% utilization standard within the first two years after project completion, the Applicants would need 14 patient referrals. As stated in Attachment – 26A, Dr. No anticipates referring 27 patients within 12 to 18 months of project completion.

Accordingly, there is sufficient population to achieve target occupancy.

3. Impact to Other Providers

- a. The proposed dialysis facility will not have an adverse impact on existing facilities in the proposed geographic service area. All of the identified patients will either be transfers from the Existing Facility or referrals of pre-ESRD patients. No patients will be transferred from other existing dialysis facilities.
- b. The proposed dialysis facility will not lower the utilization of other area providers. It is also important to note that many facilities noted at Attachment – 26C are not likely accessible

136

within 30 minutes notwithstanding the MapQuest calculated driving times indicating a 30 minute drive time.

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(e), Staffing

1. The proposed facility will be staffed in accordance with all Medicare staffing requirements.
 - a. Medical Director: Kap Joon No, M.D. will serve as the Medical Director for the proposed facility. A copy of Dr. No's curriculum vitae is attached at Attachment – 26D.
 - b. As discussed throughout this application, the Applicants seek authority to discontinue their existing 20-station dialysis facility and establish a 28-station dialysis facility. The Existing Facility is Medicare certified and fully staffed with a medical director, administrator, registered nurses, patient care technicians, social worker, and registered dietitian. Upon discontinuation of the Existing Facility, all current staff will be transferred to the Replacement Facility.
2. All staff will be training under the direction of the Replacement Facility's Governing Body, utilizing DaVita's comprehensive training program. DaVita's training program meets all State and Medicare requirements. The training program includes introduction to the dialysis machine, components of the hemodialysis system, infection control, anticoagulation, patient assessment/data collection, vascular access, kidney failure, documentation, complications of dialysis, laboratory draws, and miscellaneous testing devices used. In addition, it includes in-depth theory on the structure and function of the kidneys; including, homeostasis, renal failure, ARF/CRF, uremia, osteodystrophy and anemia, principles of dialysis; components of hemodialysis system; water treatment; dialyzer reprocessing; hemodialysis treatment; fluid management; nutrition; laboratory; adequacy; pharmacology; patient education, and service excellence. A summary of the training program is attached at Attachment – 26E.
3. As set forth in the letter from Tom Usilton, Senior Vice President of DaVita and Total Renal Care, Inc., attached at Attachment 26-F, the Replacement Facility will maintain an open medical staff.

Clinical Leadership:

- 2004 – 2006 Member at Large – Medical Executive Committee – Swedish Covenant Hospital, Chicago, Illinois
- 2000 – present Board Member of Physician Hospital Organization – Swedish Covenant Hospital, Chicago, Illinois

Volunteer Activities:

- 2005 – present Physician Leader for Medical Missions Team – Dominican Republic
- 2002 – 2005 President of Korean Arirang Lions Club- Chicago, Illinois
- 2000 – 2003 Physician Leader for Medical Missions Team - Tijuana, Mexico
- 1996 – present Medical Director of Annual Chicago Korean Health Fair

Certification and Licensure:

- 1986 *Licensed Physician and Surgeon, State of Illinois: 036-065049*
- 1986 Board certified in Nephrology : November, 1986
- 1984 American Board of Internal Medicine : September, 1984

Professional Society Membership:

- American College of Physicians
- AMA & Chicago Medical Society
- International Society of Nephrology
- American Society of Nephrology

PROGRAM DESCRIPTION

Introduction to Program

The Hemodialysis Education and Training Program is grounded in DaVita's Core Values. These core values include a commitment to providing *service excellence*, promoting *integrity*, practicing a *team* approach, systematically striving for *continuous improvement*, practicing *accountability*, and experiencing *fulfillment and fun*.

The Hemodialysis Education and Training Program is designed to provide the new teammate with the necessary theoretical background and clinical skills necessary to function as a competent hemodialysis patient care provider.

DaVita hires both non-experienced and experienced teammates.

A **non-experienced teammate** is defined as:

- A newly hired patient care teammate without prior dialysis experience.
- A rehired patient care teammate who left prior to completing the initial training.

An **experienced teammate** is defined as:

- A newly hired patient care teammate with prior dialysis experience as evidenced by successful completion of a competency exam.
- A rehired patient care teammate who left and can show proof of completing their initial training.

The curriculum of the Hemodialysis Education and Training Program is modeled after the American Nephrology Nurses Association Core Curriculum for Nephrology Nursing and the Board of Nephrology Examiners Nursing and Technology guidelines.

The program incorporates the policies, procedures, and guidelines of DaVita Inc.

The new teammate will be provided with a "StarTracker". The "StarTracker" is a tool that will help guide the training process while tracking progress. The facility administrator and preceptor will review the Star Tracker to plan and organize the training and professional development of the new teammate. The Star Tracker will guide the new teammate through the initial phase of training and then through the remainder of their first year with DaVita, thus increasing their knowledge of all aspects of dialysis. It is designed to be used in conjunction with the "My Learning Plan Workbooks."

Program Description

- The education program for the newly hired patient care provider teammate **without prior dialysis experience** is composed of at least (1) 120 hours didactic instruction and (2) 280 hours clinical practicum, unless otherwise specified by individual state regulations.

The **didactic phase** consists of instruction including but not limited to lectures, readings, self-study materials, on-line learning activities, specifically designed hemodialysis

workbooks for the teammate, demonstrations and observations. This education may be coordinated by the Clinical Services Specialist (CSS), the administrator, or the preceptor. This training includes introduction to the dialysis machine, components of the hemodialysis system, dialysis delivery system, principles of hemodialysis, infection control, anticoagulation, patient assessment/data collection, vascular access, kidney failure, documentation, complications of dialysis, laboratory draws, and miscellaneous testing devices used, introduction to DaVita Policies and Procedures, and introduction to the Amgen Core Curriculum.

The **didactic phase** also includes classroom training with the Clinical Services Specialist, which covers more in-depth theory on structure and functions of the kidneys. This includes homeostasis, renal failure ARF/CRF, uremia, osteodystrophy and anemia, principles of dialysis, components of the hemodialysis system, water treatment, dialyzer reprocessing, hemodialysis treatment (which includes machine troubleshooting and patient complications), documentation, complication case studies, heparinization and anticoagulation, vascular access (which includes vascular access workshop), patient assessment (including workshop), fluid management with calculation workshop, nutrition, laboratory, adequacy, pharmacology, patient teaching/adult learning, service excellence (which includes professionalism, ethics and communications).

A final comprehensive examination score of $\geq 80\%$ must be obtained to successfully complete this portion of the didactic phase. If a score of less than 80% is attained, the teammate will receive additional appropriate remediation and a second exam will be given.

Also included in the **didactic phase** is additional classroom training covering Health and Safety Training, DaVita Virtual Training Program (which includes 21 hours of computer training classes), One For All orientation training, HIPAA training, LMS mandatory water classes, emergency procedures specific to facility, location of disaster supplies, and orientation to the unit.

Included in the **didactic phase** for nurses is additional classroom training. The didactic phase includes:

- The role of the dialysis nurse in the facility
- Pharmacology for nurses
- Outcomes management
- Patient assessment for the dialysis nurse.

The **clinical practicum phase** consists of supervised clinical instruction provided by the facility preceptor, a registered nurse, or the clinical services specialist (CSS). During this phase the teammate will demonstrate a progression of skills required to perform the hemodialysis procedures in a safe and effective manner. A *Procedural Skills Inventory Checklist* will be completed to the satisfaction of the preceptor and the administrator.

The clinical hemodialysis workbooks will also be utilized for this training and must be completed to the satisfaction of the preceptor and the administrator.

Those teammates who will be responsible for the Water Treatment System within the facility are required to complete the Mandatory LMS Educational Water courses and the corresponding skills checklists.

Both the didactic phase and/or the clinical practicum phase of a specific skill set will be successfully completed prior to the new teammate receiving an independent assignment for that specific skill set. The new teammate is expected to attend all training sessions and complete all assignments and workbooks.

- The education program for the newly hired patient care provider teammate **with previous dialysis experience** is individually tailored based on the identified learning needs. The initial orientation to the *Health Prevention and Safety Training* will be successfully completed prior to the new teammate working/receiving training in the clinical area. The *Procedural Skills Inventory Checklist* including verification of review of applicable policies and procedures will be completed by the preceptor, a registered nurse, and/or the clinical services specialist (CSS) and the new teammate upon demonstration of an acceptable skill-level. The new teammate will also utilize the hemodialysis training workbook and progress at their own pace. This workbook should be completed within a timely manner as to also demonstrate acceptable skill-level.

The *Initial Competency Exam* will be completed; a score of $\geq 80\%$ or higher is required prior to the new teammate receiving an independent patient-care assignment. If the new teammate receives a score of less than 80%, this teammate will receive theory instruction pertaining to the area of deficiency and a second competency exam will then be given. If the new teammate receives a score of less than 80% on the second exam, this teammate will be evaluated by the administrator, preceptor, and educator to determine if completion of formal training is appropriate.

Following completion of the training, a *Verification of Competency* form will be completed (see forms TR1-06-05, TR1-06-06). In addition to the above, further training and/or certification will be incorporated as applicable by state law.

The goal of the program is for the trainee to successfully meet all training requirements. Failure to meet this goal is cause for dismissal from the training program and subsequent termination by the facility.

Process of Program Evaluation

The Hemodialysis Education Program utilizes various evaluation tools to verify program effectiveness and completeness. Key evaluation tools include the, DaVita Prep Class Evaluation (TR1-06-08), the New Teammate Satisfaction Survey on the LMS and random surveys of facility administrators to determine satisfaction of the training program. To assure continuous

Re: Certification of Support Services

Dear Chairman Galassie:

I hereby certify under penalty of perjury as provided in § 1-109 of the Illinois Code of Civil Procedure, 735 ILCS 5/1-109 and pursuant to 77 Ill. Admin. Code § 1110.1430(f) that Logan Square Dialysis will maintain an open medical staff.

I also certify the following with regard to needed support services:

- DaVita participates in a dialysis data system;
- Logan Square Dialysis will have available all needed support services consisting of clinical laboratory service, blood bank, nutrition, rehabilitation, psychiatric services, and social services; and
- Patients will have access to training for self-care dialysis, self-care instruction, home and home-assisted dialysis, and home training, which will be provided either at Logan Square Dialysis or through a signed, written agreement for these services with another facility.

Sincerely,

Tom Usilton
Senior Vice President
DaVita Inc.
Total Renal Care, Inc.

Attachment – 26F

147

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(f), Support Services

Attached at Attachment – 26F is a letter from Tom Usilton, Senior Vice President of DaVita and Total Renal Care, Inc. attesting that the proposed facility will participate in a dialysis data system, will make support services available to patients, and will provide training for self-care dialysis, self-care instruction, home and home-assisted dialysis, and home training.

148

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(g), Minimum Number of Stations

The proposed dialysis facility will be located in the Chicago-Joliet-Naperville metropolitan statistical area ("MSA"). A dialysis facility located within an MSA must have a minimum of eight dialysis stations. The Applicants propose to establish a 28-station dialysis facility. Accordingly, this criterion is met.

149

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(h), Continuity of Care

Included at Attachment – 26G is an patient transfer agreement with Swedish Covenant Hospital agreeing to accept the Applicants' ESRD patients for inpatient care and other hospital services at Swedish Covenant Hospital when needed is included.

150

PATIENT TRANSFER AGREEMENT

This **PATIENT TRANSFER AGREEMENT** (the "Agreement") is made and entered into as of the last date of signature hereunder (the "Effective Date"), by and between **Swedish Covenant Hospital** (hereinafter "Hospital") and **Total Renal Care, Inc.**, a California corporation and subsidiary of DaVita Inc. ("Company").

RECITALS

WHEREAS, the parties hereto desire to enter into this Agreement governing the transfer of patients between Hospital and the following free-standing dialysis clinic owned and operated by Company:

*Logan Square Dialysis #00311
2659 N Milwaukee Avenue, 1st Floor
Chicago, Illinois 60647-1643*

WHEREAS, the parties hereto desire to enter into this Agreement in order to specify the rights and duties of each of the parties and to specify the procedure for ensuring the timely transfer of patients between the facilities; and

WHEREAS, the parties wish to facilitate the continuity of care and the timely transfer of patients and records between the facilities.

WHEREAS, only a patient's attending physician (not Company or the Hospital) can refer such patient to Company for dialysis treatments.

NOW THEREFORE, in consideration of the premises herein contained and for other good and valuable consideration, the receipt and legal sufficiency of which are hereby acknowledged, the parties agree as follows:

I. HOSPITAL OBLIGATIONS. In accordance with the policies and procedures as hereinafter provided, and upon the recommendation of an attending physician, a patient of Company may be transferred to Hospital.

(a) Hospital agrees to exercise its best efforts to ensure the prompt admission of patients as necessary, provided that all usual, reasonable conditions of admission are met. In doing so, Hospital agrees to accept and treat patients in emergency situations requiring transfer of a patient from Company to Hospital. All transfers between the facilities shall be made in accordance with applicable federal and state laws and regulations, the standards of the Joint Commission on the Accreditation of Healthcare Organizations ("JCAHO") and any other applicable accrediting bodies, and reasonable policies and procedures of the facilities. Transfer record forms shall be completed in detail and signed by the physician or nurse in charge at Company and must accompany the patient to the receiving institution.

Attachment – 26G

151

(b) Neither the decision to transfer a patient nor the decision to not accept a request to transfer a patient shall be predicated upon arbitrary, capricious or unreasonable discrimination or based upon the patient's inability to pay for services rendered by either facility.

2. COMPANY OBLIGATIONS.

(a) Company shall notify Hospital by phone in advance of patient transfer and shall make arrangements for transport of the patient.

(b) Upon transfer of a patient to Hospital, Company agrees:

i. That it shall transfer any needed personal effects of the patient, and information relating to the same, and shall be responsible therefore until signed for by a representative of Hospital;

ii. Original medical records kept by each of the parties shall remain the property of that institution; and

iii. That transfer procedures shall be made known to the patient care personnel of each of the parties.

(c) Company agrees to transmit with each patient at the time of transfer, or in case of an emergency, as promptly as possible thereafter, an abstract of pertinent medical and other records necessary to continue the patient's treatment without interruption and to provide identifying and other information, to include:

i. current medical findings;

ii. diagnosis;

iii. rehabilitation potential;

iv. discharge summary;

v. a brief summary of the course of treatment followed;

vi. nursing and dietary information;

vii. ambulating status; and

viii. administrative and pertinent social information.

(d) Company agrees to readmit to its facilities patients who have been transferred to Hospital for medical care as clinic capacity allows. Hospital agrees to keep the administrator or designee of Company advised of the condition of the patients that will affect the anticipated date of transfer back to Company and to provide as much notice of the transfer date as possible. Company shall assign readmission priority for its patients who have been treated at Hospital and who are ready to transfer back to Company.

3. **BILLING, PAYMENT, AND FEES.** Hospital and Company each shall be responsible for billing the appropriate payor for the services it provides, respectively, hereunder. Company shall not act as guarantor for any charges incurred while the patient is a patient in Hospital.

4. **HIPAA.** Hospital and Company agree to comply with the provisions of the Health Insurance Portability and Accountability Act of 1996 ("HIPAA"). Hospital and Company acknowledge and agree that from time to time, HIPAA may require modification to this Agreement for compliance purposes. Hospital and Company further acknowledge and agree to comply with requests by the other party hereto related to HIPAA.

5. **STATUS AS INDEPENDENT CONTRACTORS.** The parties acknowledge and agree that their relationship is solely that of independent contractors. Governing bodies of Hospital and Company shall have exclusive control of the policies, management, assets, and affairs of their respective facilities. Nothing in this Agreement shall be construed as limiting the right of either to affiliate or contract with any other Hospital or facility on either a limited or general basis while this Agreement is in effect. Neither party shall use the name of the other in any promotional or advertising material unless review and approval of the intended use shall be obtained from the party whose name is to be used and its legal counsel.

6. **INSURANCE.** Each party shall secure and maintain, or cause to be secured and maintained during the term of this Agreement, comprehensive general liability, property damage, and workers compensation insurance in amounts generally acceptable in the industry, and professional liability insurance providing minimum limits of liability of \$1,000,000 per occurrence and \$3,000,000 in aggregate. Each party shall deliver to the other party certificate(s) of insurance evidencing such insurance coverage upon execution of this Agreement, and annually thereafter upon the request of the other party. Each party shall provide the other party with not less than thirty (30) days prior written notice of any change in or cancellation of any of such insurance policies. Said insurance shall survive the termination of this Agreement.

7. **INDEMNIFICATION.**

(a) **Hospital Indemnity.** Hospital hereby agrees to defend, indemnify and hold harmless Company and its shareholders, affiliates, officers, directors, employees, and agents for, from and against any claim, loss, liability, cost and expense (including, without limitation, costs of investigation and reasonable attorney's fees), directly or indirectly relating to, resulting from or arising out of any action or failure to act arising out of this Agreement by Hospital and its staff. This indemnification provision shall not be effective as to any loss attributable exclusively to the negligence or willful act or omission of Company.

(b) **Company Indemnity.** Company hereby agrees to defend, indemnify and hold harmless Hospital and its shareholders, affiliates, officers, directors, employees, and agents for, from and against any claim, loss, liability, cost and expense (including, without limitation, costs of investigation and reasonable attorney's fees), directly or indirectly relating to, resulting from or arising out of any action or failure to act arising out of this Agreement by Company and its

153

staff. This indemnification provision shall not be effective as to any loss attributable exclusively to the negligence or willful act or omission of Hospital.

(c) Survival. The indemnification obligations of the parties shall continue in full force and effect notwithstanding the expiration or termination of this Agreement with respect to any such expenses, costs, damages, claims and liabilities which arise out of or are attributable to the performance of this Agreement prior to its expiration or termination.

8. DISPUTE RESOLUTION. Any dispute which may arise under this Agreement shall first be discussed directly with representatives of the departments of the parties that are directly involved. If the dispute cannot be resolved at this level, it shall be referred to administrative representatives of the parties for discussion and resolution.

(a) Informal Resolution. Should any dispute between the parties arise under this Agreement, written notice of such dispute shall be delivered from one party to the other party and thereafter, the parties, through appropriate representatives, shall first meet and attempt to resolve the dispute in face-to-face negotiations. This meeting shall occur within thirty (30) days of the date on which the written notice of such dispute is received by the other party.

(b) Resolution Through Mediation. If no resolution is reached through informal resolution, pursuant to Section 8(a) above, the parties shall, within forty-five (45) days of the first meeting referred to in Section 8(a) above, attempt to settle the dispute by formal mediation. If the parties cannot otherwise agree upon a mediator and the place of the mediation within such forty-five (45) day period, the American Arbitration Association ("AAA") in the State of Illinois shall administer the mediation. Such mediation shall occur no later than ninety (90) days after the dispute arises. All findings of fact and results of such mediation shall be in written form prepared by such mediator and provided to each party to such mediation. In the event that the parties are unable to resolve the dispute through formal mediation pursuant to this Section 8(b), the parties shall be entitled to seek any and all available legal remedies.

9. TERM AND TERMINATION. This Agreement shall be effective for an initial period of one (1) year from the Effective Date and shall continue in effect indefinitely after such initial term, except that either party may terminate by giving at least sixty (60) days notice in writing to the other party of its intention to terminate this Agreement. If this Agreement is terminated for any reason within one (1) year of the Effective Date of this Agreement, then the parties hereto shall not enter into a similar agreement with each other for the services covered hereunder before the first anniversary of the Effective Date. Termination shall be effective at the expiration of the sixty (60) day notice period. However, if either party shall have its license to operate its facility revoked by the State or become ineligible as a provider of service under Medicare or Medicaid laws, this Agreement shall automatically terminate on the date such revocation or ineligibility becomes effective.

10. AMENDMENT. This Agreement may be modified or amended from time to time by mutual written agreement of the parties, signed by authorized representatives thereof, and any such modification or amendment shall be attached to and become part of this Agreement. No

oral agreement or modification shall be binding unless reduced to writing and signed by both parties.

11. **ENFORCEABILITY/SEVERABILITY.** The provisions of this Agreement are severable. The invalidity or unenforceability of any term or provisions hereto in any jurisdiction shall in no way affect the validity or enforceability of any other terms or provisions in that jurisdiction, or of this entire Agreement in any other jurisdiction.

12. **EXCLUDED PROVIDER.** Each party represents that neither that party nor any entity owning or controlling that party has ever been excluded from any federal health care program including the Medicare/Medicaid program or from any state health care program. Each party further represents that it is eligible for Medicare/Medicaid participation. Each party agrees to disclose immediately any material federal, state, or local sanctions of any kind, imposed subsequent to the date of this Agreement, or any investigation which commences subsequent to the date of this Agreement, that would materially adversely impact Company's ability to perform its obligations hereunder.

13. **NOTICES.** All notices, requests, and other communications to any party hereto shall be in writing and shall be addressed to the receiving party's address set forth below or to any other address as a party may designate by notice hereunder, and shall either be (a) delivered by hand, (b) sent by recognized overnight courier, or (c) by certified mail, return receipt requested, postage prepaid.

If to Hospital: Swedish Covenant Hospital

155

All notices, requests, and other communication hereunder shall be deemed effective (a) if by hand, at the time of the delivery thereof to the receiving party at the address of such party set forth above, (b) if sent by overnight courier, on the next business day following the day such notice is delivered to the courier service, or (c) if sent by certified mail, five (5) business days following the day such mailing is made.

14. **ASSIGNMENT.** This Agreement shall not be assigned in whole or in part by either party hereto without the express written consent of the other party, except that Company may assign this Agreement to one of its affiliates or subsidiaries without the consent of Hospital.

15. **COUNTERPARTS.** This Agreement may be executed simultaneously in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. Copies of signatures sent by facsimile shall be deemed to be originals.

16. **NON-DISCRIMINATION.** All services provided by Hospital hereunder shall be in compliance with all federal and state laws prohibiting discrimination on the basis of race, color religion, sex national origin, handicap, or veteran status.

17. **WAIVER.** The failure of any party to insist in any one or more instances upon performance of any terms or conditions of this Agreement shall not be construed as a waiver of future performance of any such term, covenant, or condition, and the obligations of such party with respect thereto shall continue in full force and effect.

18. **GOVERNING LAW.** The laws of the State of Illinois shall govern this Agreement.

19. **HEADINGS.** The headings appearing in this Agreement are for convenience and reference only, and are not intended to, and shall not, define or limit the scope of the provisions to which they relate.

20. **ENTIRE AGREEMENT.** This Agreement constitutes the entire agreement between the parties with respect to the subject matter hereof and supersedes any and all other agreements, either oral or written, between the parties (including, without limitation, any prior agreement between Hospital and Company or any of its subsidiaries or affiliates) with respect to the subject matter hereof.

21. **APPROVAL BY DAVITA INC. ("DAVITA") AS TO FORM.** The parties acknowledge and agree that this Agreement shall take effect and be legally binding upon the parties only upon full execution hereof by the parties and upon approval by DaVita Inc. as to the form hereof.

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(i), Relocation of Facilities

As set forth throughout this application, the Existing Facility has operated above 100% utilization for over three years. Although physicians typically press the facility to accommodate their sickest and most frail patients during the first and second shifts, it is often difficult for a patient to schedule dialysis during these optimal shifts when facilities are operating at 80% utilization. This requires patients to depart the facility in the dark. Patients, many of whom rely on assistive devices, such as canes and walkers, are faced with additional safety hazards when arriving and departing the facility in the dark. The City of Chicago has a higher crime rate than other parts of the State and both staff and patients are more vulnerable to becoming crime victims outside the facility during evening and night hours. Relocation of the Existing Facility will ensure that patients receive access to modern, high quality dialysis treatment.

158

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(j), Assurances

Attached at Attachment – 26H is a letter from Tom Usilton, Senior Vice President of DaVita and Total Renal Care, Inc. certifying that the proposed facility will achieve target utilization by the second year of operation

Re: In-Center Hemodialysis Assurances

Dear Chairman Galassie:

Pursuant to 77 Ill. Admin. Code § 1110.1430(j), I hereby certify the following:

- By the second year after project completion, Logan Square Dialysis will achieve and maintain 80% target utilization as specified in 77 Ill. Admin. Code; and
- Hemodialysis outcome measures will be achieved and maintained as follows:
 - $\geq 85\%$ of hemodialysis patient population achieves urea reduction ratio (URR) $\geq 65\%$ and
 - $\geq 85\%$ of hemodialysis patient population achieves Kt/V Daugirdas II .1.2

Sincerely,

Tom Usilton

164

Section X, Economic Feasibility Review Criteria
Criterion 1120.140(b), Conditions of Debt Financing

This project will be funded in total with cash and cash equivalents. Accordingly, this criterion is not applicable.

165

Section X, Economic Feasibility Review Criteria
Criterion 1120.310(c), Reasonableness of Project and Related Costs

1. The Cost and Gross Square Feet by Department is provided in the table below.

Table 1120.310(c)									
COST AND GROSS SQUARE FEET BY DEPARTMENT OR SERVICE									
Department (list below)	A	B	C	D	E	F	G	H	Total Cost (G + H)
	Cost/Square Foot New	Mod. Mod.	Gross Sq. Ft. New Circ.*		Gross Sq. Ft. Mod. Circ.*		Const. \$ (A x C)	Mod. \$ (B x E)	
ESRD	\$168.90		9,100						\$1,537,000
Contingency	\$16.89		9,100						\$153,700
TOTALS	\$185.79		9,100						\$1,690,700

* Include the percentage (%) of space for circulation

2. As shown in Table 1120.310(c) below, the project costs are below the State Standard.

Table 1120.310(c)			
	Proposed Project	State Standard	Above/Below State Standard
New Construction Costs	\$1,537,000	\$207 per gross square foot x 9,100 gross square feet = \$1,537,000	Below State Standard
Contingencies	\$153,700	10% of New Construction Costs = 10% x \$1,537,000 = \$153,700	Meets State Standard
Architectural/Engineering Fees	\$85,500	6.53 - 9.81% x (Construction Costs + Contingencies) = 6.53 - 9.81% x (\$1,537,000 + \$153,700) = 6.53 - 9.81% x \$1,690,700 = \$110,403 - \$165,858	Below State Standard
Consulting and Other Fees	\$97,000	No State Standard	No State Standard
Moveable Equipment	\$748,012	\$39,945 per station \$39,945 x 28 = \$1,118,460	Below State Standard

1166

Section X, Economic Feasibility Review Criteria
Criterion 1120.310(d), Projected Operating Costs

Operating Expenses: \$4,007,599

Treatments: 20,967

Operating Expense per Treatment: \$191.14

167

Section X, Economic Feasibility Review Criteria
Criterion 1120.310(e), Total Effect of Project on Capital Costs

Capital Costs: \$223,748

Treatments: 20,967

Capital Costs per Treatment: \$10.67

163

Section XI, Safety Net Impact Statement

1. This criterion is required for all substantive and discontinuation projects. DaVita Inc. and its affiliates are safety net providers of dialysis services to residents of the State of Illinois. DaVita is a leading provider of dialysis services in the United States and is committed to innovation, improving clinical outcomes, compassionate care, education and empowering patients, and community outreach. A copy of DaVita's 2010 Community Care report, which details DaVita's commitment to quality, patient centric focus and community outreach, was previously submitted on July 11, 2011 as part of Applicants' applications for Proj. Nos. 11-027 to 11-036. DaVita has taken on many initiatives to improve the lives of patients suffering from CKD and ESRD. These programs include the EMPOWER, IMPACT, CathAway, and transplant assistance programs. Furthermore, DaVita is an industry leader in the rate of fistula use and had the lowest day-90 catheter rates among large dialysis providers in 2010. Its commitment to improving clinical outcomes directly translated into 7% reduction in hospitalizations among DaVita patients, the monetary result of which is \$509 million in savings to the health care system and the American taxpayer in 2010.

DaVita accepts and dialyzes patients with renal failure needing a regular course of dialysis without regard to race, color, national origin, gender, sexual orientation, age, religion, disability or ability to pay. Because of the life sustaining nature of dialysis, federal government guidelines define renal failure as a condition that qualifies an individual for Medicare benefits eligibility regardless of their age and subject to having met certain minimum eligibility requirements including having earned the necessary number of work credits. Indigent ESRD patients who are not eligible for Medicare and who are not covered by commercial insurance are eligible for Medicaid benefits. If there are gaps in coverage under these programs during coordination of benefits periods or prior to having qualified for program benefits, grants are available to these patients from both the American Kidney Foundation and the National Kidney Foundation. If none of these reimbursement mechanisms are available for a period of dialysis, financially needy patients may qualify for assistance from DaVita in the form of free care. DaVita submits the following information regarding the amount of charity and Medicaid care provided over the most recent three years.

Safety Net Information per PA 96-0031			
CHARITY CARE			
Charity (# of patients)	2008	2009	2010
Inpatient			
Outpatient	52	66	96
Total	52	66	96
Charity (cost in dollars)			
Inpatient			
Outpatient	\$321,510	\$597,263	\$957,867
Total	\$321,510	\$597,263	\$957,867
MEDICAID			
Medicaid (# of patients)	2008	2009	2010
Inpatient			
Outpatient	443	445	563
Total	443	445	563
Medicaid (revenue)			
Inpatient			
Outpatient	\$8,695,341	\$8,820,052	\$10,447,021
Total	\$8,695,341	\$8,820,052	\$10,447,021

169

2. The proposed project will not impact the ability of other health care providers or health care systems to cross-subsidize safety net services. As shown in Table 1110.1430(b), average utilization at existing dialysis facilities within 30 minutes normal travel time of the Replacement Facility is currently 73%. Currently, the Existing Facility serves 121 ESRD patients. Dr. No, the primary referring anticipates all 121 current patients will transfer to the Replacement Facility. Dr. No also identifies 27 CKD patients that would likely be referred to the Replacement Facility. This represents an 88% utilization rate within 12 to 18 months following project completion. Thus, the Applicants do not anticipate any patients at other health care providers to transfer to the Replacement Facility. Accordingly, the proposed dialysis facility will not impact other general health care providers' ability to cross-subsidize safety net services.

3. The proposed project is for the relocation of Logan Square Dialysis and the addition of 8 stations at its new location located 0.4 miles from its current location. Patients currently treated at Logan Square will receive treatment at the new facility. As such, the discontinuation of service at the current location will not negatively impact the safety net.

Section XII, Charity Care Information

The table below provides charity care information for all dialysis facilities located in the State of Illinois that are owned or operated by the Applicants.

CHARITY CARE			
	2008	2009	2010
Net Patient Revenue	\$138,964,396	\$149,370,292	\$161,884,078
Amount of Charity Care (charges)	\$321,510	\$597,263	\$957,867
Cost of Charity Care	\$321,510	\$597,263	\$957,867

171

Appendix 1 – Time & Distance Determination: Discontinuation

Attached as Appendix I is the list of all existing facilities within 45 minutes normal travel time from the Existing Facility as determined by MapQuest.

Appendix 2 – Discontinuation Impact Letters

Attached as Appendix II is documentation of Letters of Impact of Discontinuation and Relocation sent to all existing dialysis within 45 minutes normal driving distance, as determined by MapQuest.

415

Logan Square Dialysis
2659 North Milwaukee Avenue
Chicago, Illinois 60647

May 9, 2011

CERTIFIED MAIL/RETURN RECEIPT

PRS, LLC
188 Industrial Drive, Suite 100
Chicago, IL 60620

To Whom It May Concern:

I am writing on behalf of DaVita, Inc. and Total Renal Care, Inc. to inform you of the proposed discontinuation of Logan Square Dialysis, a 20-station dialysis facility located at 2659 North Milwaukee Avenue, Chicago, Illinois (the "Existing Facility"). DaVita plans to relocate the Existing Facility to a nearby location. Your facility is within 45 minutes travel time of the Existing Facility.

The estimated date of discontinuation and relocation is no later than April 30, 2012.

Over the past two years, the facility has served between 107 and 117 end-stage renal disease patients at any given time and the census at the end of April 2011 was 115. We expect all existing patients of the Existing Facility will be transferred to the replacement facility.

While we do not anticipate the project will impact access to care for residents of the area or area health care facilities because we will accommodate the Logan Square Dialysis patient base at another nearby location, the Illinois Health Facilities and Services Review Board requires us to inform you of these plans to provide you an option to provide an impact statement from your facility. If you choose to provide such a response, please detail whether your facility's admissions policies place any restrictions or limitations on providing service to residents of the market area and your capacity by shift. Please send any such response within fifteen days of receipt of this letter to Kara M. Friedman, Polsinelli Shughart, PC, 161 North Clark Street, Suite 4200, Chicago, Illinois 60601. If we do not receive a response from you within fifteen days, it will be assumed that you agree that the closure and relocation of the facility will not affect your facility.

Appendix - 2

416

If you have any questions about DaVita's plans to relocate the facility, please feel free to contact Kara M. Friedman at kfriedman@polsinelli.com or 312-873-3639.

Sincerely,

A handwritten signature in cursive script that reads "Lisa Spillman".

On behalf of
DaVita, Inc.
Total Renal Care, Inc.
