 Corporations and limited liability companies must provide an Illinois Certificate of Good Standing. Partnerships must provide the name of the state in which organized and the name and address of each partner specifying whether each is a general or limited partner. Persons with 5 percent or greater interest in the licensee must be identified with the % of ownership. 							
APPEND DOCUMENTATION AS ATTACHMENT-3, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.							
Organizational Relationships							
Provide (for each co-applicant) an organizational chart containing the name and relationship of any person or entity who is related (as defined in Part 1130.140). If the related person or entity is participating in the development or funding of the project, describe the interest and the amount and type of any							
financial contribution.							
APPEND DOCUMENTATION AS <u>ATTACHMENT-4,</u> IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.							

Flood Plain Requireme	ents
-----------------------	------

[Refer to application instructions.]

Provide documentation that the project complies with the requirements of Illinois Executive Order #2005-5 pertaining to construction activities in special flood hazard areas. As part of the flood plain requirements please provide a map of the proposed project location showing any identified floodplain areas. Floodplain maps can be printed at www.FEMA.gov or www.illinoisfloodmaps.org. This map must be in a readable format. In addition please provide a statement attesting that the project complies with the requirements of Illinois Executive Order #2005-5 (http://www.hfsrb.illinois.gov).

APPEND DOCUMENTATION AS <u>ATTACHMENT -5,</u> IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Historic Resources Preservation Act Requirements

[Refer to application instructions.]

Provide documentation regarding compliance with the requirements of the Historic Resources Preservation Act.

APPEND DOCUMENTATION AS <u>ATTACHMENT-6</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

DESCRIPTION OF PROJECT

1. Project Classification

[Check those applicable - refer to Part 1110.40 and Part 1120.20(b)]

[Check those applicable - refer to Part 1110.40 and Part 1120.20(
Part 1110 Classification:	Part 1120 Applicability or Classification: [Check one only.]
Substantive	☐ Part 1120 Not Applicable ☐ Category A Project
☐ Non-substantive	■ Category B Project □ DHS or DVA Project

2. Narrative Description

Provide in the space below, a brief narrative description of the project. Explain WHAT is to be done in State Board defined terms, NOT WHY it is being done. If the project site does NOT have a street address, include a legal description of the site. Include the rationale regarding the project's classification as substantive or non-substantive.

The proposed project calls for the establishment of a Freestanding Emergency Center to be located in new construction at 23100 South LaGrange Road in Frankfort, Illinois.

The Center will have 6 emergency treatment stations with one procedure room, one ultra sound room, one general X-ray unit, one CT scanner, one room for EKGs and a small laboratory.

In addition to the Emergency Center, the building will contain space for two physicians' offices with the requisite exam space.

The building will have a total of 10,768 GSF.

This is a substantive project because it calls for the development of a new licensed health care facility.

The total estimated project cost is \$10,301,278. The clinical portion of the project cost totals \$7,699,135, while the non-clinical portion of the project cost totals \$2,602,143.

Project Costs and Sources of Funds

Complete the following table listing all costs (refer to Part 1120.110) associated with the project. When a project or any component of a project is to be accomplished by lease, donation, gift, or other means, the fair market or dollar value (refer to Part 1130.140) of the component must be included in the estimated project cost. If the project contains non-reviewable components that are not related to the provision of health care, complete the second column of the table below. Note, the use and sources of funds must equal.

		Project Costs and So	ources of Funds
USE OF FUNDS	CLINICAL	NONCLINICAL	TOTAL
Preplanning Costs	\$92,446	\$56,654	\$149,100
Site Survey and Soil Investigation	4,211	2,581	6,792
Site Preparation	182,378	111,780	294,158
Off Site Work	527,000	323,000	850,000
New Construction Contracts	2,559,514	1,568,735	4,128,249
Modernization Contracts			
Contingencies	255,951	156,873	412,824
Architectural/Engineering Fees	197,083	317,875	317,876
Consulting and Other Fees	248,000	152,000	400,000
Movable or Other Equipment (not in construction contracts)	3,632,552	109,727	3,742,279
Bond Issuance Expense (project related)			
Net Interest Expense During Construction (project related)			_
Fair Market Value of Leased Space or Equipment			
Other Costs To Be Capitalized			
Acquisition of Building or Other Property (excluding land)			
TOTAL USES OF FUNDS	\$7,699,135	\$2,602,143	\$10,301,278
SOURCE OF FUNDS	CLINICAL	NONCLINICAL	TOTAL
Cash and Securities	\$7,699,135	\$2,602,143	\$10,301,278
Pledges			
Gifts and Bequests			
Bond Issues (project related)			
Mortgages			_
Leases (fair market value)			
Governmental Appropriations			_
Grants			
Other Funds and Sources			
TOTAL SOURCES OF FUNDS	\$7,699,135	\$2,602,143	\$10,301,278

NOTE: ITEMIZATION OF EACH LINE ITEM MUST BE PROVIDED AT ATTACHMENT-7, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Related Project Costs

Provide the following information, as applicable, with respect to any land related to the project that will be or has been acquired during the last two calendar years:

Land acquisition is related to project Yes No Purchase Price: \$ Fair Market Value: \$	
The project involves the establishment of a new facility or a new category of service Yes No	
If yes, provide the dollar amount of all non-capitalized operating start-up costs (includir operating deficits) through the first full fiscal year when the project achieves or exceeds utilization specified in Part 1100.	
Estimated start-up costs and operating deficit cost is \$256,270.00	
Project Status and Completion Schedules	
Indicate the stage of the project's architectural drawings:	
☐ None or not applicable ☐ Preliminary	
Schematics	
Anticipated project completion date (refer to Part 1130.140): March 31, 2015	_
Indicate the following with respect to project expenditures or to obligation (refer to Part 1130.140):	
 □ Purchase orders, leases or contracts pertaining to the project have been exe □ Project obligation is contingent upon permit issuance. Provide a copy of the contingent "certification of obligation" document, highlighting any language relate CON Contingencies ■ Project obligation will occur after permit issuance. 	
APPEND DOCUMENTATION AS <u>ATTACHMENT-8,</u> IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF APPLICATION FORM.	FTHE
State Agency Submittals	
Are the following submittals up to date as applicable: Cancer Registry APORS All formal document requests such as IDPH Questionnaires and Annual Bed Reports beer submitted All reports regarding outstanding permits Failure to be up to date with these requirements will result in the application for permit	
Failure to be up to date with these requirements will result in the application for permit deemed incomplete.	being

Cost Space Requirements

Provide in the following format, the department/area **DGSF** or the building/area **BGSF** and cost. The type of gross square footage either **DGSF** or **BGSF** must be identified. The sum of the department costs **MUST** equal the total estimated project costs. Indicate if any space is being reallocated for a different purpose. Include outside wall measurements plus the department's or area's portion of the surrounding circulation space. **Explain the use of any vacated space.**

		Gross Square Feet		Amount of Proposed Total Gross Square Feet That is:

APPEND DOCUMENTATION AS <u>ATTACHMENT-9</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Facility Bed Capacity and Utilization

Complete the following chart, as applicable. Complete a separate chart for each facility that is a part of the project and insert following this page. Provide the existing bed capacity and utilization data for the latest Calendar Year for which the data are available. Include observation days in the patient day totals for each bed service. Any bed capacity discrepancy from the Inventory will result in the application being deemed incomplete.

SECTION III – BACKGROUND, PURPOSE OF THE PROJECT, AND ALTERNATIVES - INFORMATION REQUIREMENTS

This Section is applicable to all projects except those that are solely for discontinuation with no project costs.

Criterion 1110.230 - Background, Purpose of the Project, and Alternatives

READ THE REVIEW CRITERION and provide the following required information:

BACKGROUND OF APPLICANT

- A listing of all health care facilities owned or operated by the applicant, including licensing, and certification if applicable.
- 2. A certified listing of any adverse action taken against any facility owned and/or operated by the applicant during the three years prior to the filing of the application.
- 3. Authorization permitting HFSRB and DPH access to any documents necessary to verify the information submitted, including, but not limited to: official records of DPH or other State agencies; the licensing or certification records of other states, when applicable; and the records of nationally recognized accreditation organizations. Failure to provide such authorization shall constitute an abandonment or withdrawal of the application without any further action by HFSRB.
- 4. If, during a given calendar year, an applicant submits more than one application for permit, the documentation provided with the prior applications may be utilized to fulfill the information requirements of this criterion. In such instances, the applicant shall attest the information has been previously provided, cite the project number of the prior application, and certify that no changes have occurred regarding the information that has been previously provided. The applicant is able to submit amendments to previously submitted information, as needed, to update and/or clarify data.

APPEND DOCUMENTATION AS <u>ATTACHMENT-11</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM. EACH ITEM (1-4) MUST BE IDENTIFIED IN ATTACHMENT 11.

PURPOSE OF PROJECT

- Document that the project will provide health services that improve the health care or well-being of the market area population to be served.
- 2. Define the planning area or market area, or other, per the applicant's definition.
- Identify the existing problems or issues that need to be addressed, as applicable and appropriate for the project. [See 1110.230(b) for examples of documentation.]
- 4. Cite the sources of the information provided as documentation.
- Detail how the project will address or improve the previously referenced issues, as well as the population's health status and well-being.
- Provide goals with quantified and measurable objectives, with specific timeframes that relate to achieving the stated goals as appropriate.

For projects involving modernization, describe the conditions being upgraded if any. For facility projects, include statements of age and condition and regulatory citations if any. For equipment being replaced, include repair and maintenance records.

NOTE: Information regarding the "Purpose of the Project" will be included in the State Agency Report.

APPEND DOCUMENTATION AS <u>ATTACHMENT-12</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM. EACH ITEM (1-6) MUST BE IDENTIFIED IN ATTACHMENT 12.

ALTERNATIVES

1) Identify <u>ALL</u> of the alternatives to the proposed project:

Alternative options must include:

- A) Proposing a project of greater or lesser scope and cost;
- B) Pursuing a joint venture or similar arrangement with one or more providers or entities to meet all or a portion of the project's intended purposes; developing alternative settings to meet all or a portion of the project's intended purposes;
- Utilizing other health care resources that are available to serve all or a portion of the population proposed to be served by the project; and
- D) Provide the reasons why the chosen alternative was selected.
- Documentation shall consist of a comparison of the project to alternative options. The comparison shall address issues of total costs, patient access, quality and financial benefits in both the short term (within one to three years after project completion) and long term. This may vary by project or situation. FOR EVERY ALTERNATIVE IDENTIFIED THE TOTAL PROJECT COST AND THE REASONS WHY THE ALTERNATIVE WAS REJECTED MUST BE PROVIDED.
- The applicant shall provide empirical evidence, including quantified outcome data that verifies improved quality of care, as available.

APPEND DOCUMENTATION AS <u>ATTACHMENT-13</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

SECTION IV - PROJECT SCOPE, UTILIZATION, AND UNFINISHED/SHELL SPACE

Criterion 1110.234 - Project Scope, Utilization, and Unfinished/Shell Space

READ THE REVIEW CRITERION and provide the following information:

SIZE OF PROJECT:

- Document that the amount of physical space proposed for the proposed project is necessary and not excessive. This must be a narrative.
- 2. If the gross square footage exceeds the BGSF/DGSF standards in Appendix B, justify the discrepancy by documenting one of the following::
 - Additional space is needed due to the scope of services provided, justified by clinical or operational needs, as supported by published data or studies;
 - b. The existing facility's physical configuration has constraints or impediments and requires an architectural design that results in a size exceeding the standards of Appendix B;
 - c. The project involves the conversion of existing space that results in excess square footage.

Provide a narrative for any discrepancies from the State Standard. A table must be provided in the following format with Attachment 14.

	SIZE OF PROJECT						
	DEPARTMENT/SERVICE PROPOSED STATE DIFFERENCE MET STANDARD?						
	_						
ı							

APPEND DOCUMENTATION AS <u>ATTACHMENT-14.</u> IN NUMERIC SEQUENTIAL ORDER_AFTER THE LAST PAGE OF THE APPLICATION FORM.

PROJECT SERVICES UTILIZATION:

This criterion is applicable only to projects or portions of projects that involve services, functions or equipment for which HFSRB <u>has established</u> utilization standards or occupancy targets in 77 III. Adm. Code 1100.

Document that in the second year of operation, the annual utilization of the service or equipment shall meet or exceed the utilization standards specified in 1110.Appendix B. A narrative of the rationale that supports the projections must be provided.

A table must be provided in the following format with Attachment 15.

UTILIZATION								
	DEPT./ SERVICE	HISTORICAL UTILIZATION (PATIENT DAYS) (TREATMENTS) ETC.	PROJECTED UTILIZATION	STATE STANDARD	MET STANDARD?			
YEAR 1								
YEAR 2								

APPEND DOCUMENTATION AS <u>ATTACHMENT-15.</u> IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE. APPLICATION FORM.

UNFINISHED OR SHELL SPACE:

Provide the following information:

- 1. Total gross square footage of the proposed shell space;
- 2. The anticipated use of the shell space, specifying the proposed GSF tot be allocated to each department, area or function;
- 3. Evidence that the shell space is being constructed due to
 - a. Requirements of governmental or certification agencies; or
 - b. Experienced increases in the historical occupancy or utilization of those areas proposed to occupy the shell space.
- 4. Provide:
 - a. Historical utilization for the area for the latest five-year period for which data are available; and
 - b. Based upon the average annual percentage increase for that period, projections of future utilization of the area through the anticipated date when the shell space will be placed into operation.

APPEND DOCUMENTATION AS <u>ATTACHMENT-16</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

ASSURANCES:

Submit the following:

- Verification that the applicant will submit to HFSRB a CON application to develop and utilize the shell space, regardless of the capital thresholds in effect at the time or the categories of service involved.
- 2. The estimated date by which the subsequent CON application (to develop and utilize the subject shell space) will be submitted; and
- 3. The anticipated date when the shell space will be completed and placed into operation.

APPEND DOCUMENTATION AS <u>ATTACHMENT-17</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

S. Freestanding Emergency Center Medical Services

These criteria are applicable only to those projects or components of projects involving the freestanding emergency center medical services (FECMS) category of service.

A. Criterion 1110.3230 - ESTABLISHMENT OF FREESTANDING EMERGENCY CENTER (MEDICAL SERVICES

Read the criterion and provide the following information:

- Utilization Provide the projected number of patient visits per day for each treatment station in the FEC based upon 24-hour availability, including an explanation of how the projection was determined.
- 2. The identification of the municipality of the FEC and FECMS and the municipality's population as reported by the most recently available U.S. Census Bureau data.
- The identification of the hospital that owns or controls the FEC and the distance of the proposed FEC from that hospital, including an explanation of how that distance was calculated.
- 4. The identification of the Resource Hospital affiliated with the FEC, the distance of the proposed FEC from that Resource Hospital, (including an explanation of how that distance was calculated), and identification of that Resource Hospital's EMS system, including certification of the hospital's Resource Hospital status.
- 5. Certification signed by two authorized representative(s) of the applicant entity(s) that they have reviewed, understand and plan to comply with both of the following requirements:
 - A) The requirements of becoming a Medicare provider of freestanding emergency services; and
 - B) The requirements of becoming licensed under the Emergency Medical Services Systems Act [210 ILCS 50/32.5].
- 6. Area Need; Service to Area Residents Document the proposed service area and projected patient volume for the proposed FEC:
 - A) Provide a map of the proposed service area, indicating the boundaries of the service area, and the total minutes travel time from the proposed site, indicating how the travel time was calculated.
 - B) Provide a list of the projected patient volume for the proposed FEC, categorized by zip code. Indicate what percentage of this volume represents residents from the proposed FEC's service area.
 - C) Provide either of the following:
 - a) Provide letters from authorized representatives of hospitals, or other FEC facilities, that are part of the Emergency Medical Services System (EMSS) for the defined service area, that contain patient origin information by zip code, (each letter shall contain a certification by the authorized representative that the representations contained in the letter are true and correct. A complete set of the letters with original notarized signatures shall accompany the application for permit), or
 - b) Patient origin information by zip code from independent data sources

(e.g.,Illinois Hospital Association CompData or IDPH hospital discharge data), based upon the patient's legal residence, for patients receiving services in the existing service area's facilities' emergency departments (EDs), verifying that at least 50% of the ED patients

Freestanding Emergency Center Medical Services (continued)

served during the last 12-month period were residents of the service area.

- 7. Area Need; Service Demand Historical Utilization
 - A) Provide the annual number of ED patients that have received care at facilities that are located in the FEC's service area for the latest two-year period prior to submission of the application
 - B) Provide the estimated number of patients anticipated to receive services at the proposed FEC, including an explanation of how the projection was determined.
- 8. Area Need; Service Accessibility Document the following (using supporting documentation as specified in accordance with the requirements of 77 IAC 1110.3230(b)(4)(B) Supporting Documentation):
 - The absence of the proposed ED service within the service area;
 - ii) The area population and existing care system exhibit indicators of medical care problems,
 - iii) All existing emergency services within the 30-minute normal travel time meet or exceed the utilization standard specified in 77 IAC 1100.
- Unnecessary Duplication Document that the project will not result in an unnecessary duplication by providing the following information:
 - A) A list of all zip code areas (in total or in part) that are located within 30 minutes normal travel time of the project's site;
 - B) The total population of the identified zip code areas (based upon the most recent population numbers available for the State of Illinois population); and
 - C) The names and locations of all existing or approved health care facilities located within 30 minutes normal travel time from the project site that provide emergency medical services.
- 10. Unnecessary Maldistribution Document that the project will not result in maldistribution of services by documenting the following:
 - A) Historical utilization (for the latest 12-month period prior to submission of the application) for existing ED departments within 30 minutes travel time of the applicant's site that is below the utilization standard established pursuant to 77 I AC 1100.800; or
 - B) Insufficient population to provide the volume or caseload necessary to utilize the ED services proposed by the project at or above utilization standards.
- 11. Unnecessary Duplication/Maldistribution Document that, within 24 months after project completion, the proposed project will not lower the utilization of other service area providers below, or further below, the utilization standards specified in 77 III. Adm. Code 1100 (using supporting documentation in accordance with the requirements of 77 IAC 1110.3230(c)(4)).
- 12. Staffing Availability Document that a sufficient supply of personnel will be available to staff the service (in accordance with the requirements of 1110.3230(e)).
- B. Criterion 1110.3230 EXPANSION OF EXISTING FREESTANDING EMERGENCY CENTER MEDICAL SERVICES

Read the criterion and provide the following information:

 The identification of the municipality of the FEC and FECMS and the municipality's population as reported by the most recently available U.S. Census Bureau data.

Freestanding Emergency Center Medical Services (continued)

- The identification of the hospital that owns or controls the FEC and the distance of the proposed FEC from that hospital, including an explanation of how that distance was calculated.
- 3. The identification of the Resource Hospital affiliated with the FEC, the distance of the proposed FEC from that Resource Hospital, (including an explanation of how that distance was calculated), and identification of that Resource Hospital's EMS system, including certification of the hospital's Resource Hospital status.
- 4. Provide copies of Medicare and EMS licensure, in addition to certification signed by two authorized representative(s) of the applicant entity(s), indicating that the existing FEC complies with both of the following requirements:
 - A) The requirements of being a Medicare provider of freestanding emergency services; and
 - B) The requirements of being licensed under the Emergency Medical Services Systems Act [210 ILCS 50/32.5].
- 5. Area Need; Service to Area Residents Document the proposed service area and projected patient volume for the expanded FEC:
 - A) Provide a map of the proposed service area, indicating the boundaries of the service area, and the total minutes travel time from the expanded FEC, indicating how the travel time was calculated.
 - B) Provide a list of the historical (latest 12-month period) patient volume for the existing FEC, categorized by zip code, based on the patient's legal residence. Indicate what percentage of this volume represents residents from the existing FEC's service area, based on patient's legal residence.
- 6. Staffing Availability Document that a sufficient supply of personnel will be available to staff the service (in accordance with the requirements of 1110.3230(e)).

C. Criterion 1110.3230 - MODERNIZATION OF EXISTING FREESTANDING EMERGENCY CENTER MEDICAL SERVICES) CATEGORY OF SERVICE

Read the criterion and provide the following information:

- The historical number of visits (based on the latest 12-month period) for the existing FEC.
- 2. The identification of the municipality of the FEC and FECMS and the municipality's population as reported by the most recently available U.S. Census Bureau data.
- The identification of the hospital that owns or controls the FEC and the distance of the proposed FEC from that hospital, including an explanation of how that distance was calculated.
- 4. The identification of the Resource Hospital affiliated with the FEC, the distance of the proposed FEC from that Resource Hospital, (including an explanation of how that distance was calculated), and identification of that Resource Hospital's EMS system, including certification of the hospital's Resource Hospital status.
- 5. Provide copies of Medicare and EMS licensure, in addition to certification signed by two authorized representative(s) of the applicant entity(s), indicating that the existing FEC complies with both of the following requirements:
 - A) The requirements of being a Medicare provider of freestanding emergency services; and
 - B) The requirements of being licensed under the Emergency Medical Services Systems Act [210 ILCS 50/32.5].

Freestanding Emergency Center Medical Services (continued)

6. Category of Service Modernization - Document that the existing treatment areas to be modernized are deteriorated or functionally obsolete and need to be replaced or modernized, due to such factors as, but not limited to; high cost of maintenance, non-compliance with licensing or life safety codes, changes in standards of care, or additional space for diagnostic or therapeutic purposes. Documentation shall include the most recent IDPH Centers for Medicare and Medicaid Services (CMMS) Inspection reports, and Joint Commission on Accreditation of Healthcare Organizations reports. Other documentation shall include the following, as applicable to the factors cited in the application; copies of maintenance reports, copies of citations for life safety code violations, and other pertinent reports and data.

APPEND DOCUMENTATION AS <u>ATTACHMENT-38</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

The following Sections <u>DO NOT</u> need to be addressed by the applicants or co-applicants responsible for funding or guaranteeing the funding of the project if the applicant has a bond rating of A- or better from Fitch's or Standard and Poor's rating agencies, or A3 or better from Moody's (the rating shall be affirmed within the latest 18 month period prior to the submittal of the application):

- Section 1120.120 Availability of Funds Review Criteria
- Section 1120.130 Financial Viability Review Criteria
- Section 1120.140 Economic Feasibility Review Criteria, subsection (a)

VIII. - 1120.120 - Availability of Funds

The applicant shall document that financial resources shall be available and be equal to or exceed the estimated total project cost plus any related project costs by providing evidence of sufficient financial resources from the following sources, as applicable: Indicate the dollar amount to be provided from the following sources:

	a) Cash and Securities – statements (e.g., audited financial statements, letters from financial institutions, board resolutions) as to:
	institutions, board resolutions) as to.
	 the amount of cash and securities available for the project, including the identification of any security, its value and availability of such funds; and
•	 interest to be earned on depreciation account funds or to be earned on any asset from the date of applicant's submission through project completion;
	b) Pledges – for anticipated pledges, a summary of the anticipated pledges showing anticipated receipts and discounted value, estimated time table of gross receipts and related fundraising expenses, and a discussion of past fundraising experience.
	c) Gifts and Bequests – verification of the dollar amount, identification of any conditions of use, and the estimated time table of receipts;
	d) Debt – a statement of the estimated terms and conditions (including the debt time period, variable or permanent interest rates over the debt time period, and the anticipated repayment schedule) for any interim and for the permanent financing proposed to fund the project, including:
	 For general obligation bonds, proof of passage of the required referendum or evidence that the governmental unit has the authority to issue the bonds and evidence of the dollar amount of the issue, including any discounting anticipated;
	 For revenue bonds, proof of the feasibility of securing the specified amount an interest rate;
	For mortgages, a letter from the prospective lender attesting to the expectation of making the loan in the amount and time indicated, including the anticipated interest rate and any conditions associated with the mortgage, such as, but no limited to, adjustable interest rates, balloon payments, etc.;
	4) For any lease, a copy of the lease, including all the terms and conditions, including any purchase options, any capital improvements to the property and provision of capital equipment;
	For any option to lease, a copy of the option, including all terms and conditions.
	e) Governmental Appropriations – a copy of the appropriation Act or ordinance accompanied by a statement of funding availability from an official of the governmental unit. If funds are to be made available from subsequent fiscal years, a copy of a resolution or other action of the governmental unit attesting to this intent;
	 Grants – a letter from the granting agency as to the availability of funds in terms of the amount and time of receipt;
	g) All Other Funds and Sources – verification of the amount and type of any other funds that will be used for the project.
_	TOTAL FUNDS AVAILABLE
	TOTAL FUTURE ATAILABLE

APPEND DOCUMENTATION AS <u>ATTACHMENT-39</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

IX. 1120.130 - Financial Viability

All the applicants and co-applicants shall be identified, specifying their roles in the project funding or guaranteeing the funding (sole responsibility or shared) and percentage of participation in that funding.

Financial Viability Waiver

The applicant is not required to submit financial viability ratios if:

- 1. "A" Bond rating or better
- 2. All of the projects capital expenditures are completely funded through internal sources
- 3. The applicant's current debt financing or projected debt financing is insured or anticipated to be insured by MBIA (Municipal Bond Insurance Association Inc.) or equivalent
- The applicant provides a third party surety bond or performance bond letter of credit from an A rated quarantor.

See Section 1120.130 Financial Waiver for information to be provided

APPEND DOCUMENTATION AS <u>ATTACHMENT-40,</u> IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

The applicant or co-applicant that is responsible for funding or guaranteeing funding of the project shall provide viability ratios for the latest three years for which audited financial statements are available and for the first full fiscal year at target utilization, but no more than two years following project completion. When the applicant's facility does not have facility specific financial statements and the facility is a member of a health care system that has combined or consolidated financial statements, the system's viability ratios shall be provided. If the health care system includes one or more hospitals, the system's viability ratios shall be evaluated for conformance with the applicable hospital standards.

Provide Data for Projects Classified as:	Category A or Category B (last three years)	Category B (Projected)
Enter Historical and/or Projected Years:		
Current Ratio		
Net Margin Percentage		
Percent Debt to Total Capitalization		
Projected Debt Service Coverage		
Days Cash on Hand		
Cushion Ratio		

Provide the methodology and worksheets utilized in determining the ratios detailing the calculation and applicable line item amounts from the financial statements. Complete a separate table for each co-applicant and provide worksheets for each.

2. Variance

Applicants not in compliance with any of the viability ratios shall document that another organization, public or private, shall assume the legal responsibility to meet the debt obligations should the applicant default.

APPEND DOCUMENTATION AS <u>ATTACHMENT 41</u>, IN NUMERICAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

X. 1120.140 - Economic Feasibility

This section is applicable to all projects subject to Part 1120.

A. Reasonableness of Financing Arrangements

The applicant shall document the reasonableness of financing arrangements by submitting a notarized statement signed by an authorized representative that attests to one of the following:

- That the total estimated project costs and related costs will be funded in total with cash and equivalents, including investment securities, unrestricted funds, received pledge receipts and funded depreciation; or
- 2) That the total estimated project costs and related costs will be funded in total or in part by borrowing because:
 - A) A portion or all of the cash and equivalents must be retained in the balance sheet asset accounts in order to maintain a current ratio of at least 2.0 times for hospitals and 1.5 times for all other facilities; or
 - B) Borrowing is less costly than the liquidation of existing investments, and the existing investments being retained may be converted to cash or used to retire debt within a 60-day period.

B. Conditions of Debt Financing

This criterion is applicable only to projects that involve debt financing. The applicant shall document that the conditions of debt financing are reasonable by submitting a notarized statement signed by an authorized representative that attests to the following, as applicable:

- That the selected form of debt financing for the project will be at the lowest net cost available:
- That the selected form of debt financing will not be at the lowest net cost available, but is more advantageous due to such terms as prepayment privileges, no required mortgage, access to additional indebtedness, term (years), financing costs and other factors;
- That the project involves (in total or in part) the leasing of equipment or facilities and that the expenses incurred with leasing a facility or equipment are less costly than constructing a new facility or purchasing new equipment.

C. Reasonableness of Project and Related Costs

Read the criterion and provide the following:

 Identify each department or area impacted by the proposed project and provide a cost and square footage allocation for new construction and/or modernization using the following format (insert after this page).

	cos	AND GRO	OSS SQUA	ARE FEE	T BY DEP	ARTMEN	T OR SERVI	CE	
D	Α	В	С	D	E	F	G	н	T-4-1
Department (list below)	Cost/Squ New	are Foot Mod.	Gross New	Sq. Ft. Circ.*	Gross S Mod.	Sq. Ft. Circ.*	Const. \$ (A x C)	Mod. \$ (B x E)	Total Cost (G + H)
Contingency						_		_	
TOTALS							<u>-</u>		
* Include the pe	rcentage (%	of space	for circula	tion					

D. Projected Operating Costs

The applicant shall provide the projected direct annual operating costs (in current dollars per equivalent patient day or unit of service) for the first full fiscal year at target utilization but no more than two years following project completion. Direct cost means the fully allocated costs of salaries, benefits and supplies for the service.

E. Total Effect of the Project on Capital Costs

The applicant shall provide the total projected annual capital costs (in current dollars per equivalent patient day) for the first full fiscal year at target utilization but no more than two years following project completion.

APPEND DOCUMENTATION AS <u>ATTACHMENT -42,</u> IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

XI. Safety Net Impact Statement

SAFETY NET IMPACT STATEMENT that describes all of the following must be submitted for <u>ALL SUBSTANTIVE AND</u> DISCONTINUATION PROJECTS:

- 1. The project's material impact, if any, on essential safety net services in the community, to the extent that it is feasible for an applicant to have such knowledge.
- 2. The project's impact on the ability of another provider or health care system to cross-subsidize safety net services, if reasonably known to the applicant.
- 3. How the discontinuation of a facility or service might impact the remaining safety net providers in a given community, if reasonably known by the applicant.

Safety Net Impact Statements shall also include all of the following:

- 1. For the 3 fiscal years prior to the application, a certification describing the amount of charity care provided by the applicant. The amount calculated by hospital applicants shall be in accordance with the reporting requirements for charity care reporting in the Illinois Community Benefits Act. Non-hospital applicants shall report charity care, at cost, in accordance with an appropriate methodology specified by the Board.
- 2. For the 3 fiscal years prior to the application, a certification of the amount of care provided to Medicaid patients. Hospital and non-hospital applicants shall provide Medicaid information in a manner consistent with the information reported each year to the Illinois Department of Public Health regarding "Inpatients and Outpatients Served by Payor Source" and "Inpatient and Outpatient Net Revenue by Payor Source" as required by the Board under Section 13 of this Act and published in the Annual Hospital Profile.
- 3. Any information the applicant believes is directly relevant to safety net services, including information regarding teaching, research, and any other service.

A table in the following format must be provided as part of Attachment 43.

Safety Ne	t Information pe	r PA 96-0031	
	CHARITY CAR	Ē

Outpatient		
Total		

APPEND DOCUMENTATION AS <u>ATTACHMENT-43</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

XII. Charity Care Information

Charity Care information MUST be furnished for ALL projects.

- 1. All applicants and co-applicants shall indicate the amount of charity care for the latest three <u>audited</u> fiscal years, the cost of charity care and the ratio of that charity care cost to net patient revenue.
- 2. If the applicant owns or operates one or more facilities, the reporting shall be for each individual facility located in Illinois. If charity care costs are reported on a consolidated basis, the applicant shall provide documentation as to the cost of charity care; the ratio of that charity care to the net patient revenue for the consolidated financial statement; the allocation of charity care costs; and the ratio of charity care cost to net patient revenue for the facility under review.
- If the applicant is not an existing facility, it shall submit the facility's projected patient mix by payer source, anticipated
 charity care expense and projected ratio of charity care to net patient revenue by the end of its second year of operation.

Charity care" means care provided by a health care facility for which the provider does not expect to receive payment from the patient or a third-party payer. (20 ILCS 3960/3) Charity Care must be provided at cost.

A table in the following format must be provided for all facilities as part of Attachment 44.

	CHARITY CARE		
	Year	Year	Year
Net Patient Revenue			
Amount of Charity Care (charges)			
Cost of Charity Care			

APPEND DOCUMENTATION AS <u>ATTACHMENT-44</u>, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

LLOYD CHRISTIANSEN, BEING DULY SWORN ON OATH, STATES THAT HE RESIDES AT 31245 S. ELEVATOR RD., PEOTONE, IL 60468 . THAT THE ATTACHED DEED IS NOT IN VIOLATION OF 765 ILCS 205/0.01 et seq. FOR ONE OF THE FOLLOWING REASONS:

- The division or subdivision of land into parcels or tracts of 2.5 acres or more in size which does not involve any new streets or easements of access.
- The division of lots or blocks of less than 1 acre in any recorded subdivision which does not involve any new streets or easements of access.
- The sale or exchange of parcels of land between owners of adjoining and contiguous land.
- 4. The conveyance of parcels of land or interests therein for use as right of way for railroads or other public utility facilities, which does not involve any new streets or easements of access.
- 5. The conveyance of land owner by a railroad or other public utility which does not involve any new streets or easements of access.
- 6. The conveyance of land for highway or other public purposes or grants or conveyances relating to the dedication of land for public use or instruments relating to the vacation of land impressed with a public use.
- 7. Conveyances made to correct descriptions in prior conveyances.
- 8. The sale or exchange of parcels or tracts of land existing on the date of the amendatory act (7/17/59) into no more than 2 parts and not involving any new streets or easements of access.
- 9. The sale of a single lot of less than 2.5 acres from a larger tract when a survey is made by a registered surveyor; provided, that this exemption shall not apply to the sale of any subsequent lots from the same larger tract of land, as determined by the dimensions and configuration of the larger tract on October 1, 1973, and provided also that this exemption does not invalidate any local requirements applicable to the subdivision of land. Amended by P.A. 80-318,1, eff. Oct. 1, 1977.

The conveyance is of land described in the same manner as title was taken by Grantor(s).

CIRCLE NUMBER ABOVE WHICH IS APPLICABLE TO ATTACHED DEED

Affiant further states that he makes this affidavit for the purpose of inducing the Recorder of Deeds of $\underline{\text{Will}}$ County, Illinois, to accept the attached deed for recording.

PLEASE REFER TO:

IHPA LOG #007091912

Green Garden Township SW of Steger Road and US Route 445 Section:36-Township:34N-Range:12E IEPA, MARS-1674 New construction, Riverside Medical Center

September 20, 2012

Mathew Dougherty McShane Construction Company, LLC 9550 West Higgins Road, Suite 200 Rosemont, IL 60018

Dear Mr. Dougherty:

The Illinois Historic Preservation Agency is required by the Illinois State Agency Historic Resources Preservation Act (20 ILCS 3420, as amended, 17 IAC 4180) to review all state funded, permitted or licensed undertakings for their effect on cultural resources. Pursuant to this, we have received information regarding the referenced project for our comment.

Our staff has reviewed the specifications under the state law and assessed the impact of the project as submitted by your office. We have determined, based on the available information, that no significant historic, architectural or archaeological resources are located within the proposed project area.

According to the information you have provided concerning your proposed project, apparently there is no federal involvement in your project. However, please note that the state law is less restrictive than the federal cultural resource laws concerning archaeology. If your project will use federal loans or grants, need federal agency permits, use federal property, or involve assistance from a federal agency, then your project must be reviewed under the National Historic Preservation Act of 1966, as amended. Please notify us immediately if such is the case.

This clearance remains in effect for two (2) years from date of issuance. It does not pertain to any discovery during construction, nor is it a clearance for purposes of the IL Human Skeletal Remains Protection Act (20 ILCS 3440).

Please retain this letter in your files as evidence of compliance with the Illinois State Agency Historic Resources Preservation Act.

Sincerely,

Anne E. Haaker

Deputy State Historic

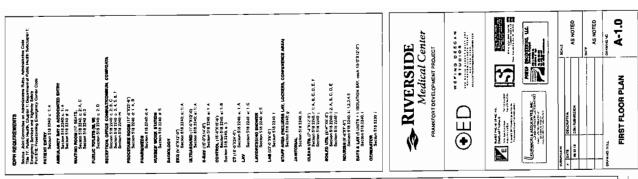

Preservation Officer

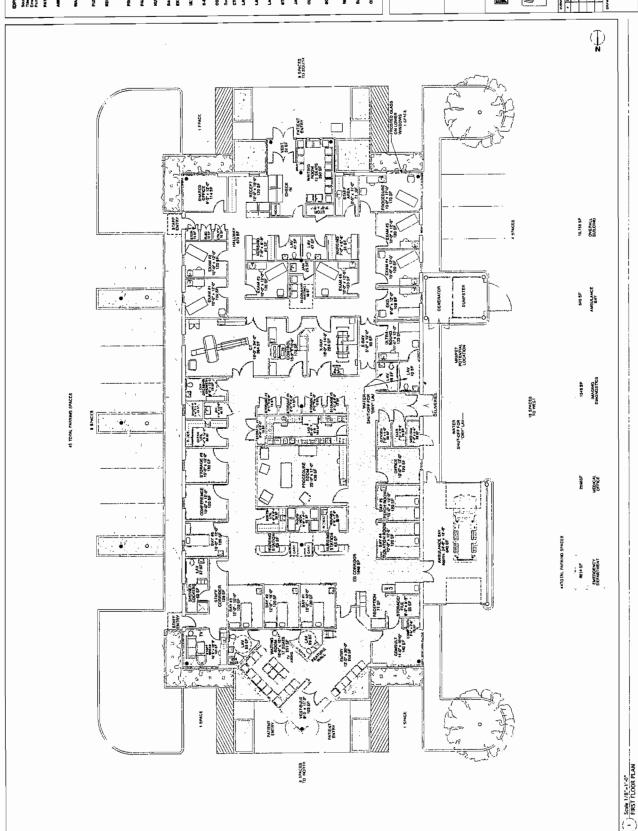

E. Flacker

Background of Applicant

- 1. The applicant for this project is Riverside Medical Center. Riverside is a licensed and accredited hospital located in Kankakee, Illinois in Kankakee County. The applicant is a part owner in the Riverside Ambulatory Surgery Center and the Center for Digestive Health Ambulatory Surgical Treatment Center, of which both are located in Bourbonnais, Illinois.
- 2. The applicant does not own or operate any other health care facilities.
- 3. A statement from the CEO of the hospital certifying that there has been no adverse action taken against the applicant during the three year period prior to the filing of this application is appended to this attachment. The applicant's letter also authorizes the HFSRB and IDPH access to any information deemed necessary to verify information pertinent to the project.
- 4. A copy of the hospital license and the Certificate of Accreditation by the Joint Commission are appended to this attachment.

Signature:

Phillip M. Kambic, its President & CEO

Notarization:

Subscribed and sworn to before me this

October 31, 2012

Ms. Courtney R. Avery Administrator Illinois Health Facilities and Services Review Board 525 West Jefferson Street, 2nd Floor Springfield, IL 62761

Dear Ms. Avery:

Please accept this letter as attestation that neither Riverside Medical Center, nor any facility owned by Riverside Medical Center has been the recipient of any adverse actions taken by IDPH or DHHS during the past three years.

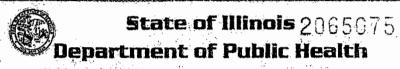

Furthermore, the Illinois Health Facilities Planning Board and/or its staff is herein granted authorization to review the records of Riverside Medical Center and it's affiliated organizations as related to licensure and certification.

Sincerely

Phillip Kambic
President & CEO

The Accreditation Association for Ambulatory Health Care (AAAHC) is pleased to provide your organization the Survey Report from your March 21-22, 2011 survey. Your organization is to be congratulated on achieving accreditation, as awarded in the decision letter, which expires March 31, 2014.

Members of your organization should take time to review the enclosed Survey Report:

- Any standard marked "PC" (Partially Compliant) or "NC" (Non-Compliant) must be corrected promptly. Subsequent surveys by the AAAHC will seek evidence that deficiencies from this survey were addressed without delay.
- The Summary Table provides an overview of compliance for each chapter applicable to the
 organization. Emphasis for attention should be given to chapters marked "PC" (Partially
 Compliant) or "NC" (Non-Compliant).
- As a guide to the ongoing process of self-evaluation, periodically review the Survey Report to
 ensure the organization's ongoing compliance with the standards throughout the term of
 accreditation.
- Statements in the "Consultative Comments" sections of the report represent the educational
 component of the survey. Such comments may provide suggested approaches for correcting
 identified deficiencies.

We hope the survey has been beneficial to your organization in identifying its strengths and opportunities to improve. AAAHC trusts that you will continue to find the accreditation experience meaningful, not only from the benefit of having carefully reviewed your own operation, but also from the recognition brought forth by your participation in this survey process.

If you have any questions or comments, please contact AAAHC at (847) 853-6060.

Sincerely,

Meg Gravesmill, MBA

Survey Dates:

January 10-11, 2011

It is a pleasure to inform you that the Accreditation Association for Ambulatory Health Care, Inc. (AAAHC) Accreditation Committee has awarded The Center for Digestive Health, a three-year term of accreditation.

Granting accreditation reflects confidence, based on evidence from this recent survey that you meet, and will continue to demonstrate throughout the accreditation term, the attributes of an accreditable organization as reflected in the standards found in the Accreditation Handbook for Ambulatory Health Care. The dedication and effort necessary for an organization to be accredited is substantial and the compliance with those standards implies a commitment to continual self-evaluation and continuous improvement.

Members of your organization should take time to review your Survey Report, which may arrive separately:

- Any standard marked "PC" (Partially Compliant) or "NC" (Non-Compliant) must be corrected promptly. Subsequent surveys by the AAAHC will seek evidence that deficiencies from this survey were addressed without delay.
- The Summary Table provides an overview of compliance for each chapter applicable to the organization. Emphasis for attention should be given to chapters marked "PC" (Partially Compliant) or "NC" (Non-Compliant).
- As a guide to the ongoing process of self-evaluation, periodically review the Survey Report to ensure the organization's ongoing compliance with the standards throughout the term of accreditation.
- Statements in the "Consultative Comments" sections of the report represent the educational component of the survey. Such comments may provide suggested approaches for correcting identified deficiencies.

AAAHC policies and procedures and standards are revised on an annual basis, such revisions become effective March 1 each year. Accredited organizations are required to maintain their operations in compliance with the current AAAHC standards and policies. Therefore, the organization is encouraged to visit the AAAHC website, www.aaahc.org, for information pertaining to any revisions to AAAHC policies and procedures and standards.

We hope the survey has been beneficial to your organization in identifying its strengths and opportunities to improve. AAAHC trusts that you will continue to find the accreditation experience meaningful, not only from the benefit of having carefully reviewed your own operation, but also from the recognition brought forth by your participation in this survey process.

If you have any questions or comments about any portion of the accreditation process, please contact the AAAHC Accreditation Services department at (847) 853-6060.

PURPOSE OF PROJECT

The purpose of the proposed project is to improve access to emergency services for the residents of the service area as defined on the map included in this attachment. The service area includes those cities and areas surrounding and adjacent to Interstate Route 57. The service area is also supported by access via IL Route 45 and IL Route 6.

Riverside Medical Center has strongly held to a primary goal of improving access to health care for the communities it serves by bringing health care services and supports close to its constituents. Over the past several decades, Riverside has developed primary care clinics, rural health clinics, ambulatory care campuses, and outreach ambulance services throughout its geographic service area. The map entitled "Key Strategy: Geographic Access" shows where current health care facilities and services are located to achieve the goal of providing care closer to the residents.

The proposed project will further that important goal of Riverside's to provide necessary health care services within easy access for area residents. The proposal was developed after many discussions with the community leaders and residents of the communities within the proposed service area and subsequently Riverside learned that those residents felt their greatest needs were for emergency services within a shorter drive time of their homes and for more primary care providers nearby.

The proposed service area consists primarily of southeastern Will County and northeastern Kankakee County. Both areas have experienced significant population growth in the past ten years and are projected to have further growth in the next 10 years.

A study conducted in 2011 by The Robert Woods Johnson Foundation found that Kankakee County ranked number 80 of the 104 Illinois Counties for Morbidity and that Kankakee County ranked number 59 for Mortality. Will County fared better in the same study but was ranked number 43 for Morbidity. Both counties have significant health challenges. Improved access to care, health care services, and additional physicians could improve these health outcomes. [Attachment 12(a)]

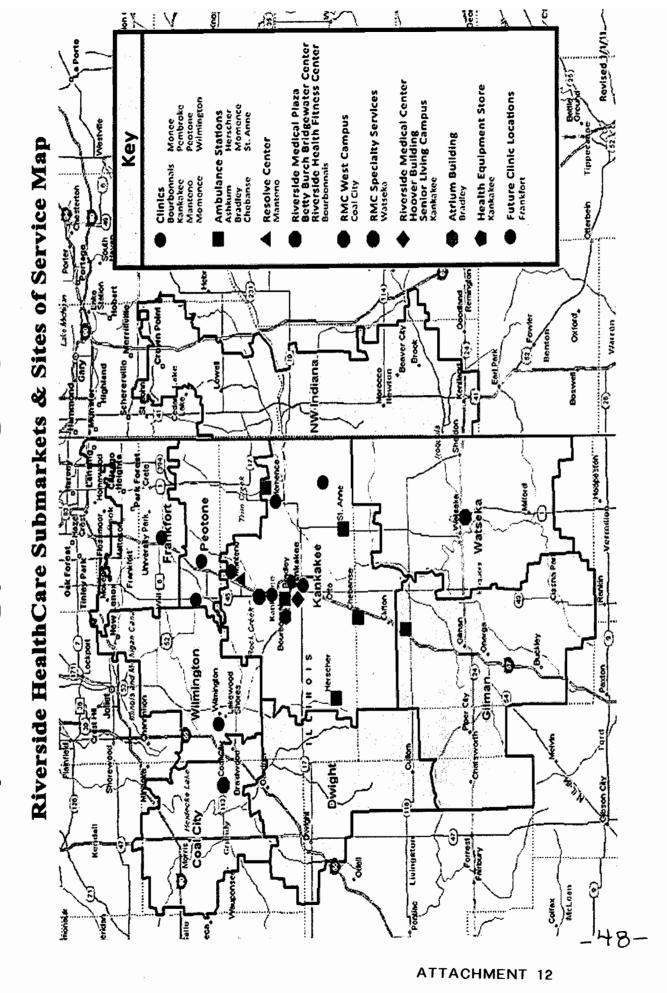

The population growth in both counties was significant and particularly in the immigrant population groups as shown in the attached reports from their respective Community Health Assessments. Those groups have historically been underinsured and have more difficulty accessing the healthcare system. Riverside Medical Center has developed its extensive and geographically dispersed outreach network so that all population groups are well served and the services are available regardless of the payor status of the patient. [Attachments 12(b) and 12(c)]

With the current legislation slated to improve healthcare insurance access for the vast majority of the population in this country, studies are predicting there will be an accelerated demand for emergency services and a significant increase in emergency room visits. This proposed Freestanding Emergency Center project would likely be opened in the time frame that will match the accelerated demand and provide care close to residents' homes.

PURPOSE OF PROJECT

The measurable outcomes of this project are to increase access to care by reducing distance and drive times for the service area residents to both emergency care and primary care physician services. The applicants plan is to reduce the residents travel time by 40-50% for ED services in the first three years of the Freestanding Emergency Center's operation.

INTRODUCTION

In early Spring 2011, a broad array of public health stakeholders from Kankakee County convened as the *Partnership for a Healthy Community*, a collaborative whose vision is to build a strong, healthy and safe community. In the following months, *Partnership for a Healthy Community* worked towards its mission to create "a healthy community through comprehensive assessments and the implementation of effective action plans" by participating in the *Mobilizing for Action through Planning and Partnerships* (MAPP) process.

MAPP is a community-driven strategic planning framework that assists communities in developing and implementing efforts around the prioritization of public health issues and the identification of resources to address them as defined by the <u>10 Essential Public Health Services</u>. The MAPP process includes four assessment tools of which this Kankakee County Community Health Status Assessment is one.

MAPP Model, Achieving Healthier Communities through MAPP User's Handbook http://www.naccho.org/topics/infrastructure/mapp/upload/MAPP Handbook fnl.pdf

This report comprises comprehensive data describing who resides in Kankakee County, the community's health status and strengths and risks that may be contributing to residents' wellbeing. Through the review of the 2007 Kankakee County Analysis of Community Health Needs and collaborative decision-making and local guidance by the Partnership for a Healthy Community's Kankakee County Community Health Status Assessment Sub-Committee, more than 100 key health indicators were identified for this report. Indicators include population demographics, household characteristics, education, employment, income and poverty statistics, birth and death rates and health status and resource information.

Each page of this document represents specific health indicators, including data for Kankakee County and, where available, Illinois and/or national data comparisons. For the reader's convenience and where applicable, symbols are presented to indicate whether Kankakee County is doing better (+),

INTRODUCTION CONTINUED

worse (-), or about the same (=) as compared to that same indicator for the state and/or nationally and to the 2007 Kankakee County Analysis of Community Health Needs data. Data sources, hyperlinks to these sources and a brief data summary are also available on each page.

This report is intended for both community dissemination and use in informing the *Partnership for a Healthy Community* as they seek to identify community health and quality of life needs for Kankakee County. Through the MAPP process, this *Kankakee County Community Health Status Assessment* will help to establish a system to support continuous health status monitoring and to identify challenges and opportunities to shape the health of Kankakee County residents' for the future.

EXECUTIVE SUMMARY

Population

The population of Kankakee County has grown 9.3% from 2000 to 2010. The population is approximately divided among the 0-20, 20-40, 40-60 and over 60 age groups; the average age is 36.7. Males and females are roughly in equal proportion, with the gender ratio leaning towards males until age 60. Bourbonnais and Bradley have grown faster than the county, at 22% and 24% respectively, while Kankakee has remained essentially the same. Cabery and Chebanse Villages also grew over 100%. By township, Manteno had the most population growth, 40%, while Pembroke and Aroma each lost 10% of their population.

Race, Ethnicity, Language and Ancestry

Kankakee County is predominantly white (77.6%). This percentage fell slightly since 2000, while the black population stayed constant at 15.1% and the Hispanic population increased to 9%. Most of the Hispanic population is Mexican. While Bourbonnais and Bradley reflect the county pattern, Kankakee is less than 50% white, 40% black and almost 20% Hispanic. In Kankakee County, the white population is older (median age 39.8) compared to the black (median age 29.5) and Hispanic (median age 23.1) population. This suggests that the population will continue to shift. Most of the population, 95.5%, is native-born.

School districts overall mirror the county make-up. However, Kankakee #111 and Pembroke #259 are predominantly black, and St. Anne HS #256 has equal white and black populations. This suggests the black population is highly concentrated in certain areas.

Household Characteristics, Marital Status and Marriage/Divorce

The average family in Kankakee County is 3.13 persons and the average household is 2.61, similar to 2005. Almost 70% of households are families; about 8% of households are single-females with children, and about 4% are single-males with children. However, about 30% of children live with a single-female householder, up from 21% in 2000; only 61% live in a family with married parents. Over 50% of the over 65 population are living with family, though 20% are females living alone. About 8% of the over 65 over population are living in group quarters. Unmarried partners are rare (6.6%) but increased from 5.1% in 2000; male-male and female-female households make up only 0.3% of households.

About 50% of the population is married, 40% never married, 10% divorced and 7% widowed; females are much more likely than males to be widowed. The number of marriages each year has been decreasing over the past two decades; there was a sharp increase in divorces in 2007 through 2008.

Housing

Kankakee County has a lower rate of vacant housing units compared to the state and national rates. About a third of housing in Kankakee County is rented. Whites are more likely to be homeowners than blacks or Hispanics; the percent of blacks owning homes decreased slightly while the percent of Hispanics increased slightly since 2000.

The median owner-occupied house value increased by 64% from 2000 to 2010, while the median gross rent increased 31%. Forty-seven percent of renters have unaffordable housing (more than 30% of income), up from 37% in 2000; and 27% of owners have unaffordable housing. Again, Bradley and Bourbonnais mirror the county rates, while Kankakee actually has slightly more renters (50%) than owners (49%).

EXECUTIVE SUMMARY CONTINUED

Education and Employment

About 36% of the county population had a high school degree (or equivalent) as their highest educational level by age 25 and that percentage has not changed since 2000. However, only 9.4% earned a bachelor's degree, also the same since 2000, and only half the Illinois rate. Similarly, only 16.1% earned a bachelor's degree or higher, compared to 30.8% in IL and 28.2% across the country. High school graduation rates vary greatly by race and school district.

Overall, 62% of the over 16 population is in the labor force, which is similar to the Illinois and U.S. rates. While overall 72% of females are in the labor force, 79% of females with children under 6 years old are in the labor force, which is an almost 10 point increase from 2000. Kankakee County tends to have less of the labor force in management/business/science compared to Illinois and slightly more in service, construction/maintenance and production/transportation occupations.

Kankakee County's unemployment rate has remained at or above the Illinois rate for the past three decades. As in Illinois and the U.S. in general, there has been a large increase in the unemployment rate since 2007; that rate now stands at 13% in Kankakee County. Blacks are twice as likely to be unemployed than whites. Unemployment is also highest in the 16-19 year old age group, among those with less than a high school degree and those living in Kankakee.

Income and Poverty

Both whites and Hispanics have median incomes above the county median, while blacks have a lower median income. Likewise, single-female parent households tend to be below the household median income. The overall poverty rate is 14%; it is higher for those under 18, blacks, Hispanics, female-headed households and residents of Kankakee.

Slightly fewer children are on state medical assistance compared to the total Illinois population, but slightly more of the adult population is enrolled in state medical assistance.

Natality

Kankakee County's natality rates for all races are very similar to state rates. Births by race are similar to the racial composition of the county, though proportionally somewhat higher for blacks and slightly lower for Hispanics – 76% are white, 23% black and 12% Hispanic. Kankakee County tends to have younger mothers than Illinois – almost 40% of mothers were younger than 24 years old, compared with 30% in Illinois. Kankakee County has a higher teen birth rate than Illinois. This rate has been increasing since 2005; currently 13.5% of births are to teens. Similarly, the rate of births to unmarried mothers (never married or divorced) is higher than Illinois and has been increasing since 2003. Although data was not available for some years, the current rate is 50.9%.

Kankakee County is similar to Illinois in terms of low and very low birth weight babies; however, the rates for blacks are much higher than for whites – 16.4% low and 3.2% very low for Kankakee blacks compared to 7.3% low and 1.6% very low for Kankakee whites. Perhaps related, fewer Kankakee County residents are receiving adequate prenatal care compared to Illinois –only 22% get adequate plus care and 17% get inadequate care. Kankakee County mothers are more likely to smoke but less likely to drink while pregnant than Illinois mothers in general.

There was an increase in cardiovascular defects in newborns to almost 140 per 10,000 live births, which is higher than the rate of 110 for Illinois. The rate of induced pregnancy terminations for Kankakee County has been much lower than the Illinois rate for the past decade and currently stands at 80.9 per 1000 live births.

EXECUTIVE SUMMARY CONTINUED

Mortality

Kankakee County's age-adjusted mortality rate is higher than the Illinois rate; in 2007, it was 891.5 per 100,000 population. The rate is higher in Kankakee County compared to Illinois among the 1-4, 10-14, 20-24, 35-33 and over 65 age groups. The leading causes of mortality are heart disease and cancer, both of which affect men at a higher rate than women. Kankakee County also has a high rate of Alzheimer's, particularly in men, compared to Illinois; specifically, the rate was 73.7 per 100,000 for Kankakee County men, compared to a 16.8 for Illinois men.

Heart disease and cancer are the leading causes of age-adjusted mortality for both blacks and whites; the rates are higher than the Illinois rate for both white and blacks and higher in blacks than whites. Blacks also had a higher rate of stroke compared to whites in Kankakee County. However, the leading causes of premature mortality for whites are malignant neoplasm, accidents and perinatal conditions, compared to accidents, perinatal conditions and homicide for blacks.

Health Status

Kankakee County is higher than the Illinois in terms of reports of arthritis and high blood pressure and similar in terms of asthma and diabetes. About 28% of the adults in Kankakee County are obese and physically inactive. Breast cancer incidence is similar to the state overall, but much higher among black women – 179.5 per 100,000 compared to 119.2 for the state. Cancer screening rates are similar between Kankakee County and Illinois. Kankakee County is similar to the state in terms of children's blood lead levels and vaccinations.

Rates of chlamydia and gonorrhea in Kankakee County are at or above Illinois averages, which include Chicago; on the other hand, syphilis rates are at or below state averages. Among other communicable diseases, chicken pox and meningitis (both bacterial and viral) have decreased from 2005 to 2010. 2006 seemed to have unusually high rates of shigellosis and TB. In 2010, there were six cases of rabies and eight cases of HIV.

Diseases of the circulatory and respiratory systems are the top two diagnoses related to hospitalization and have been decreasing since 2008. Of the over 65 population, 33% report a disability, most commonly ambulatory or independent-living disabilities.

Mental Health and Substance Abuse

In terms of mental health since 2000, the suicide rate in Kankakee County remains slightly above that of Illinois (9.2 versus 7.8 per 100,000). The percentage reporting poor mental health has decreased from 2001 to 2009 and is now slightly below the state rate. However, 19% of the population reported more than 8 days of poor mental health in the last month, and 26% reported 1-7 days.

Kankakee County is similar to Illinois in terms of binge drinking (which is currently at about 16%), DUI arrests (435 per 100,000) and smoking; about 25% of adults are current smokers in Kankakee County and 23% are former smokers. Drug offense arrests were lower in 2009 than in previous years; this could reflect changes in crime or in police staffing/procedures.

Health Resources

Overall, 88% of Kankakee County residents responded that they have health care and have a place to go when sick. Twenty-four percent were on Medicare. However, 13% did not go to a doctor in the past year or get medication when needed due to costs.

EXECUTIVE SUMMARY CONTINUED

Health Resources Continued

Mental health providers in Kankakee County are responsible for almost three times as many residents as the state average, while primary care physicians are responsible for about twice as many residents as the state average. However, Kankakee County has 143.6 total physicians per 100,000 residents compared to a national average of 87.6.

Crime and Violence

The overall rate of index crimes is 3000 per 100,000 for Kankakee County in 2009; Bradley, Kankakee, Momence and St. Anne were above average. The index crime rate has declined since 2007. Domestic violence reports vary from year to year, with about 600 per year. Elder abuse reports have generally been between 110 and 120 per year, though higher in 2008 and 2009. Reports of child abuse and sex abuse against children are slightly higher than the Illinois rate, at 35.7 per 1000 and 3.6 per 1000 respectively.

CHAPTER 1

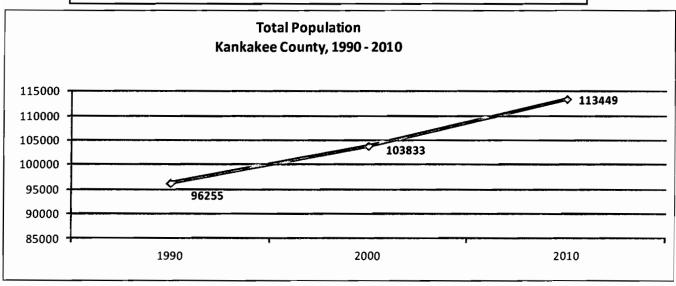

POPULATION

KANKAKEE COUNTY POPULATION

The population of Kankakee County grew steadily from a total of 96,255 in 1990 to 113,449 in 2010. This growth was 3 times the rate in Illinois over the time period 2000 to 2010.

Data Source US Census Bureau

Data Source URL http://www.census.gov/popfinder/

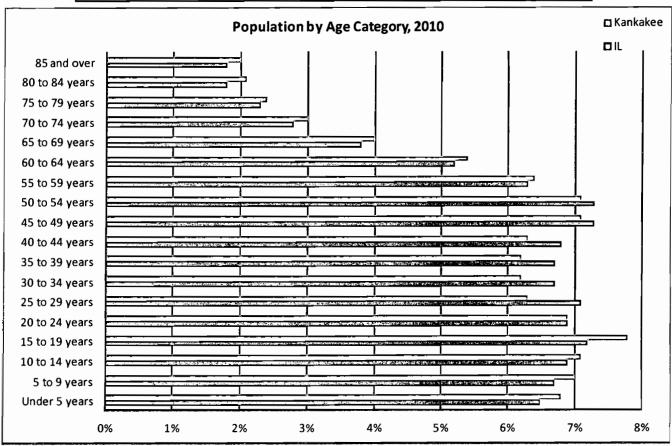

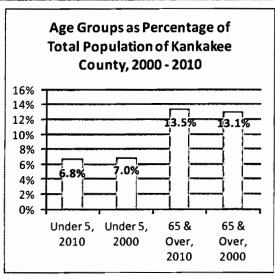

KANKAKEE COUNTY POPULATION BY AGE

The population by age category for 2010 is presented below. From 2000 to 2010 the percentage of the population in the 65 and Over category increased slightly from 13.1% to 13.5% while the Under 5 categories have reduced slightly from 7.0% to 6.8%.

Data Source US Census Bureau

Data Source URL http://www.census.gov/popfinder/

KANKAKEE COUNTY POPULATION BY AGE AND SEX

The figure below provides data on the population by age and sex. The greatest differences can be seen in the older age categories (60 years and above) where females represent a greater percentage of every age category.

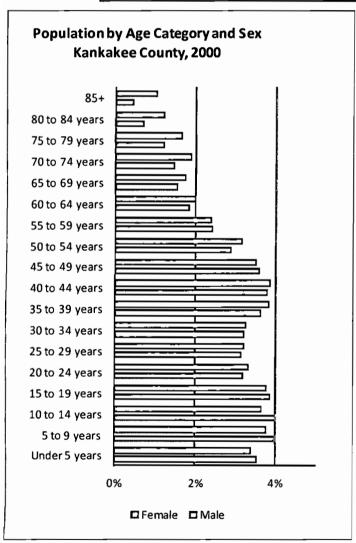

The median age was 35.2 in 2000; the median age was 36.7 in 2010.

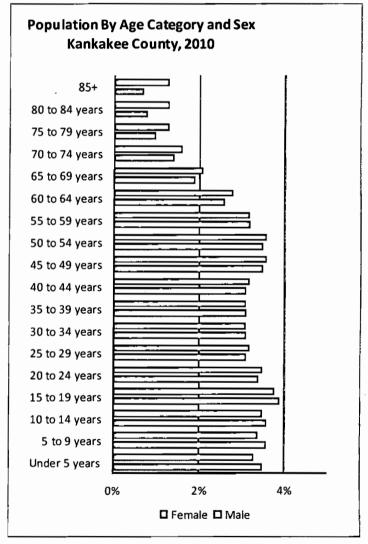

Males represented 49.1% of the population in 2010, up from 48.9% in 2000; the female percentage decreased from 51.1% to 50.9%.

The median age for males in 2010 was 35.5; the median age for females was 37.8.

 Data Source
 US Census Bureau

 Data Source URL
 http://www.census.gov/popfinder/

POPULATION OF LARGER KANKAKEE

COUNTY COMMUNITIES

The populations of Bourbonnais and Bradley grew during the last decade; Bourbonnais from 15,265 in 2000 to 18,631 in 2010; Bradley from 12,784 In 2000 to 15,895 in 2010. The population of Kankakee township remained relatively steady, from 27,491 in 2000 to 27,537 in 2010,

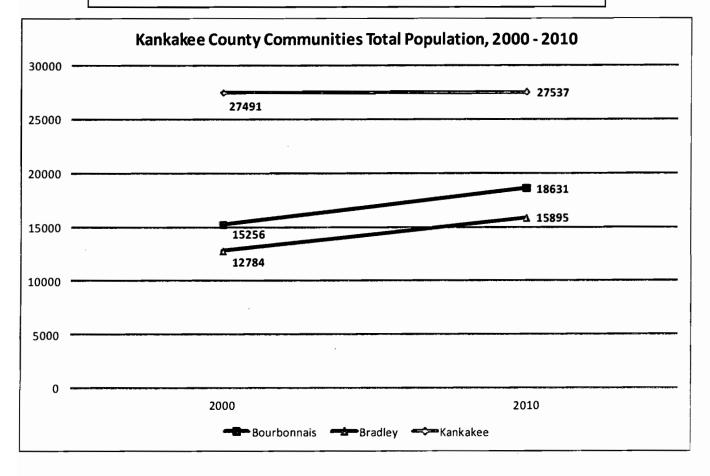

Data Source

US Census Bureau, 2010 Census

Data Source URL

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=DEC_10_DP_DPDP1&prodType=table

MIGRATION

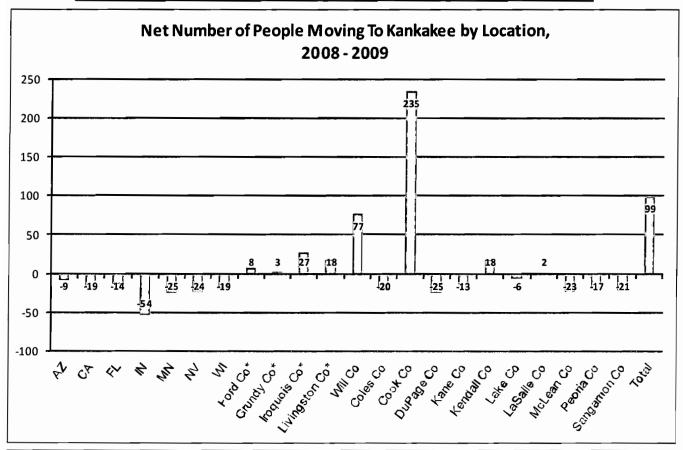

The greatest rates of migration to and from Kankakee County from 2008 to 2009 were from Cook County (40%) and Will County (25%) Illinois.

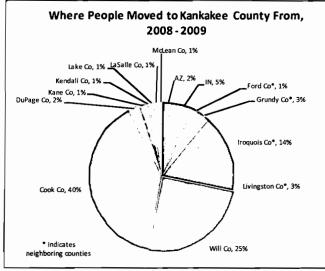

Data Source

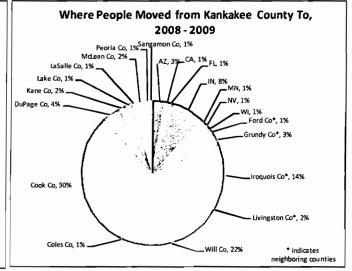

US Internal Revenue Service

Data Source URL

http://www.irs.gov/pub/irs-soi/countyinflow0809.csv

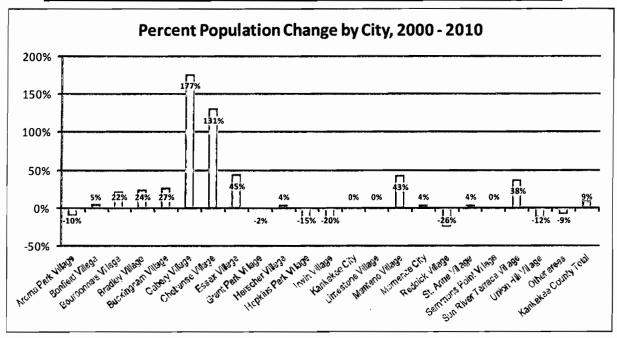

POPULATION CHANGE

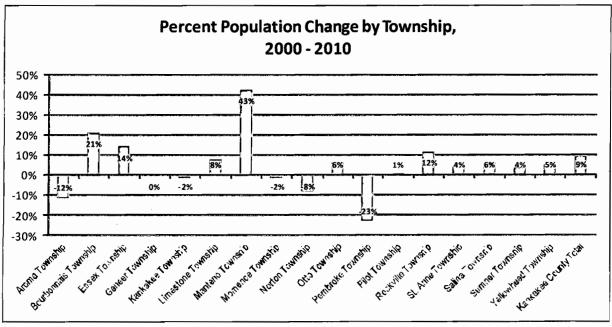

The greatest population change by city was seen in Cabery Village (over 150% increase) and Chebanese Village (nearly a 150% increase) followed by smaller gains in Manteno and Sun River Terrace with nearly 50% increase each.

Manteno Township grew by nearly 40% while Pembroke Township fell by over 20%.

Data Source US Census Bureau, 2010 Census

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?
pid=DEC 10 DP DPDP1&prodType=table

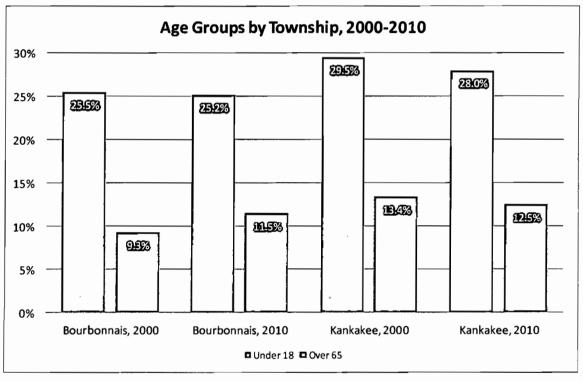

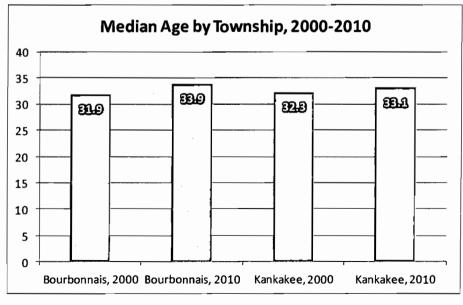

AGE CHARACTERISTICS OF KANKAKEE COUNTY TOWNSHIPS

The percentage of both the under 18 and over 65 segments of the population shrank slightly in Kankakee from 2000 to 2010. The under 18 population went from 29.5% to 28.0% while the over 65 group went from 13.4% to 12.5%. in Bourbonnais, the under 18 population decreased from 25.5% to 25.2% while the Over 65 population increased form 9.3% to 11.5%. The median age in both townships increased slightly from years 2000 to 2010.

Data Source US Census Bureau

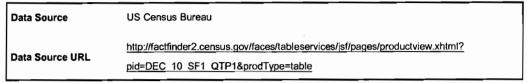

Data Source URL http://www.census.gov/popfinder/

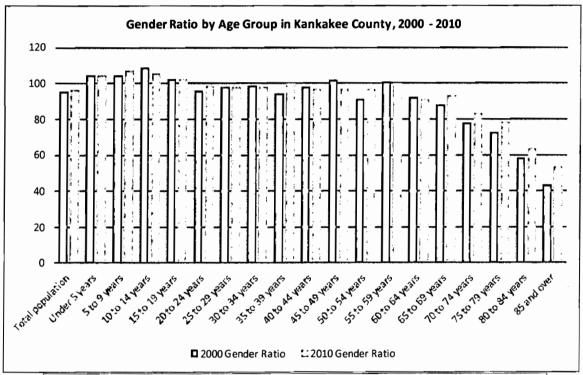

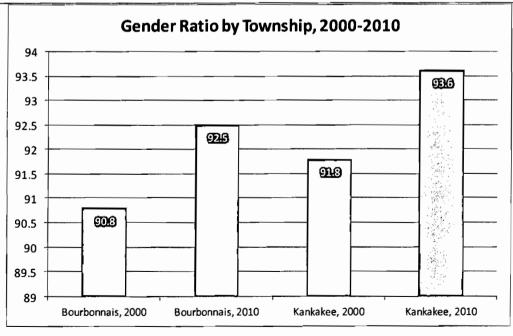

GENDER RATIO

The gender ratio is defined as the number of males per 100 females. So a ratio of 92 means there are 92 males for every 100 females. The biggest change in the gender ratio of any group in Kankakee County was in the 85 and Older category. In the townships there has been an increase in the ratio of men to women from the years 2000 to 2010.

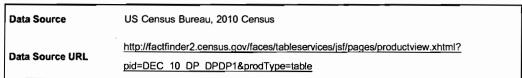

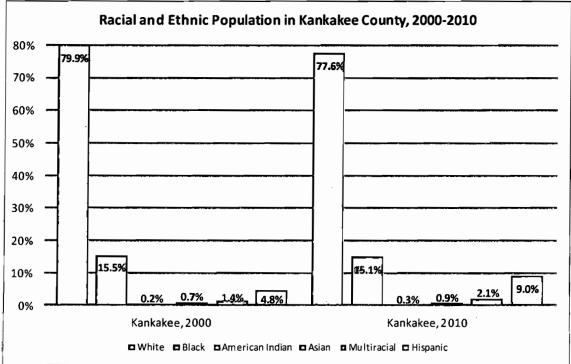

CHAPTER 2

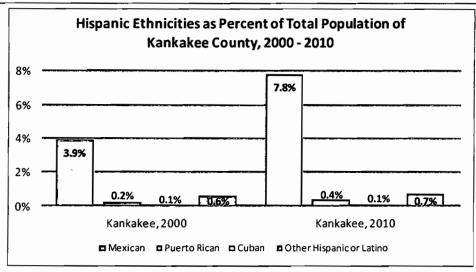

RACE, ETHNICITY, LANGUAGE AND ANCESTRY

RACIAL AND ETHNIC COMPOSITION OF KANKAKEE COUNTY POPULATION

The changes in the racial composition of the Kankakee County population between 2000 and 2010 are presented in the figures below. The percentage of the population that is white fell from 83% in 2000 to 77.6% in 2010. The black population remained almost unchanged (15.0% in 2000; 15.1% in 2010). The Hispanic population in the county almost doubled from the years 2000 to 2010, increasing from 4.8% to 9.0%. The greatest increases within the Hispanic population were in the Mexican population, going from 3.9% to 7.8%, and the Puerto Rican population, which doubled from 0.2% to 0.4%.

RACIAL AND ETHNIC COMPOSITION OF

KANKAKEE COUNTY COMMUNITIES

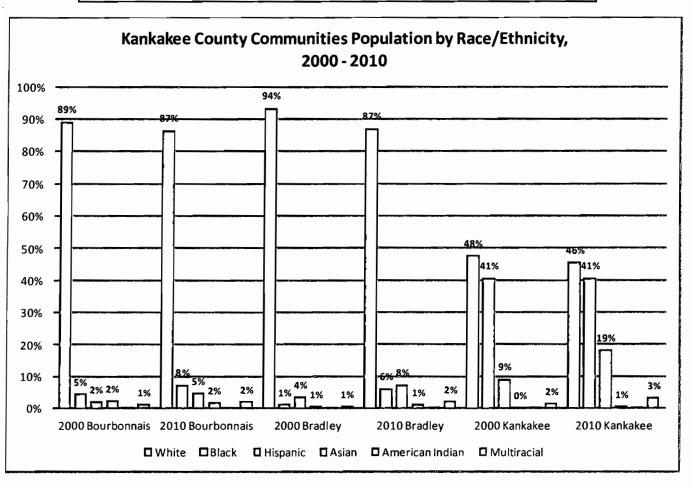

The populations of Bourbonnais and Bradley are overwhelmingly white, with percentages at or near 90%. This percentage changed little between 2000 and 2010. Kankakee's population is much more diverse, with blacks making up nearly 40% of the population and Hispanics accounting for nearly 20%. The percentage of blacks in Kankakee changed very little between 2000 and 2010 while the percentage of Hispanics increased more than 10% during that same time.

Data Source

US Census Bureau

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=DEC 10 DP DPDP1&prodType=table

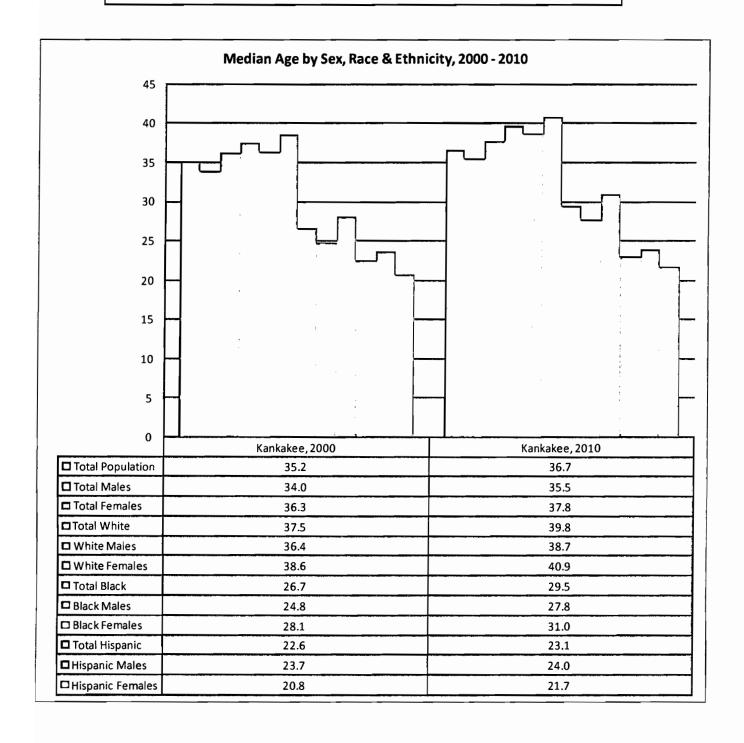

MEDIAN AGE BY SEX, RACE AND ETHNICITY

Every age/race category showed an increase in median age from 2000 to 2010. The median age for the total population went up from 35.2 to 36.7 for 2000 to 2010 (males from 34.0 to 35.5; females from 36.3 to 37.8).

Data Source US Census Bureau

Data Source URL http://www.census.gov/popfinder/

RACIAL AND ETHNIC COMPOSITION

OF STUDENT POPULATION

Nine of the 12 school districts have populations that are overwhelmingly white. Kankakee #111 and Pembroke #259 have majority black populations while St. Anne has a nearly equal distribution of black and white students. Four school districts, Bradley #61, Kankakee #111, Momence #1 and St. Anne #256 have Hispanic populations over 10%.

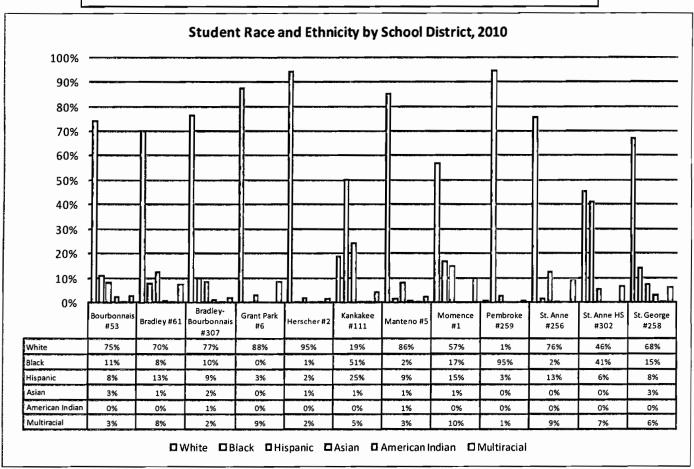

·K to 12 school include: #s111, 1, 5, 6 and 2

· Grade schools only include: #s 61, 53, 256, 258, 61 and 259

· High Schools only include: #s 302 and 307

Data Source Illinois State Board of Education

Data Source URL http://www.isbe.net/research/htmls/fall-housing.htm

ANCESTRY

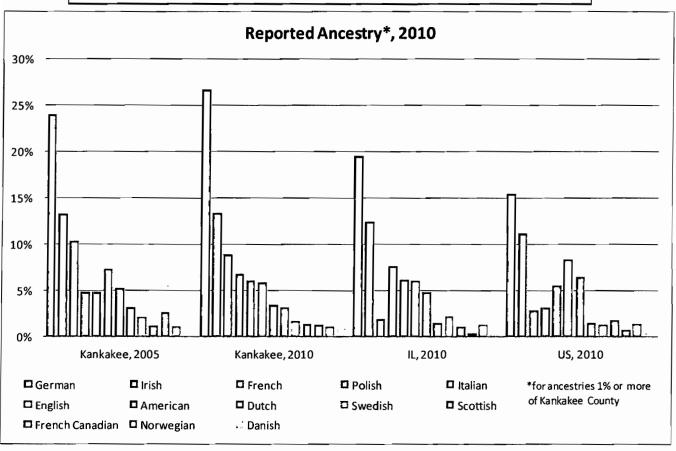

There was an increase in persons of German and Italian ancestry from 2000 to 2010 in Kankakee County along with decreases in the proportion of English and French ancestry. The largest group is German, constituting just under a quarter of the population in 2000 and increasing to just over a quarter in 2010.

Data Source

US Census Bureau, 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=ACS 10 1YR DP02&prodType=table

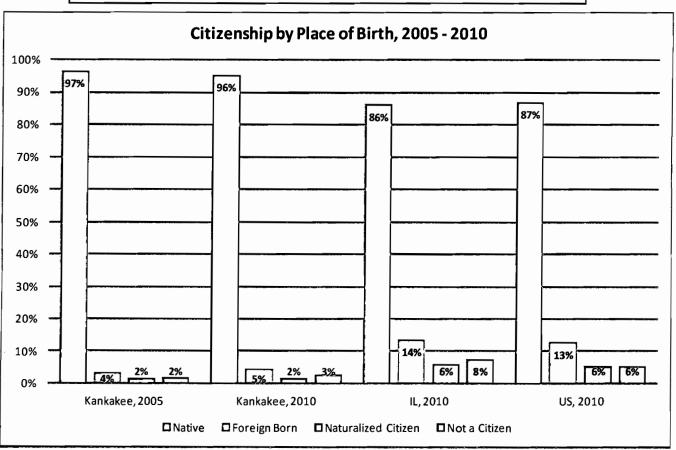

FOREIGN BORN

While the US saw increases in foreign born residents, the percentages in Kankakee County remained relatively unchanged from 2005 to 2010. The native population went down slightly from 96.5% to 95.5%; the foreign born went up from 3.5% to 4.5%; and those who are not a citizen went from 2.0% to 2.9%.

Data Source

US Census Bureau, 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?
pid=ACS 10 1YR DP02&prodType=table

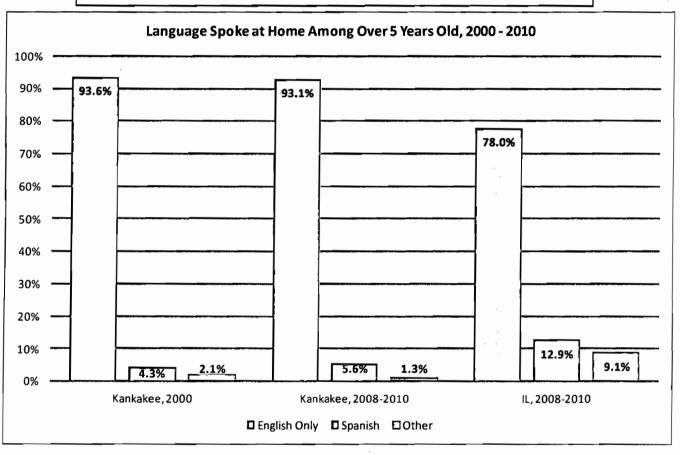

LANGUAGE

English is by far the most commonly spoken language by individuals over 5 years old in Kankakee County (93.6% in 2000; 93.1% in 2008-2010). These percentages are considerably above the percentage in Illinois (78%). The percentage of Spanish speakers in Kankakee County, while still relatively small, has increased from 4.3% to 5.6% and the Other language category has gone down from 2.1% to 1.3%. Both of these percentages are far below the percentages for the state.

Data Source

US Census, 2008 - 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?
pid=ACS 10 3YR DP02&prodType=table

CHAPTER 3

HOUSEHOLD CHARACTERISTICS, MARITAL STATUS AND MARRIAGE/DIVORCE

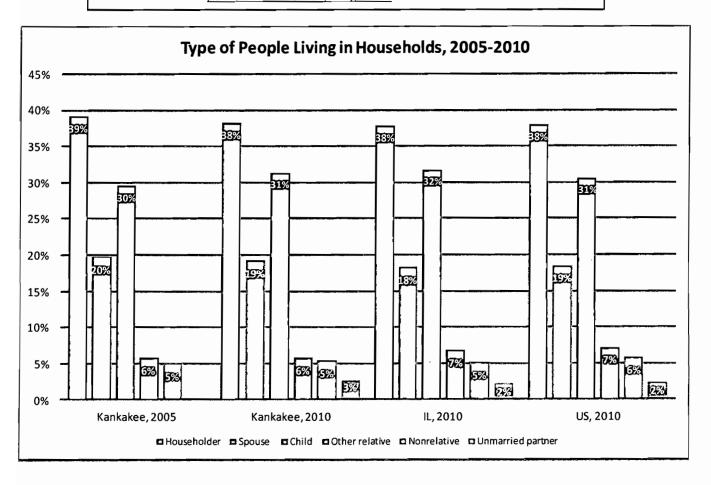

HOUSEHOLD RELATIONSHIPS

The percentage of children in households increased slightly in Kankakee County from 29.6% in 2005 to 31.4% in 2010. Overall, percentages in Kankakee County are similar to those in Illinois and the U.S.

Data Source US Census Bureau

Data Source URL http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

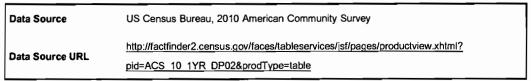

pid=ACS 10_1YR_DP02&prodType=table

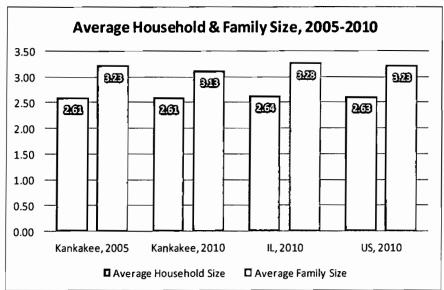

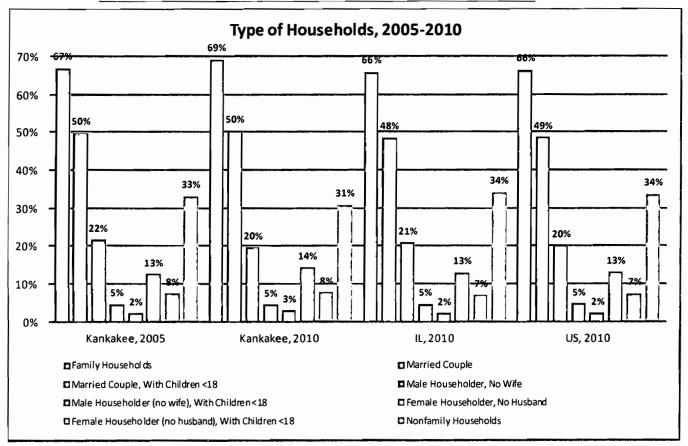

HOUSEHOLD STRUCTURE

The percentage of households headed by a female increased from 2005 to 2010 in Kankakee County as is slightly above the percentages for Illinois and the U.S.

Average household size has stayed relatively unchanged from 2005 to 2010 in Kankakee County, while the average family size went from 3.23 to 3.13.

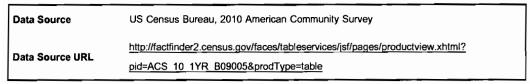

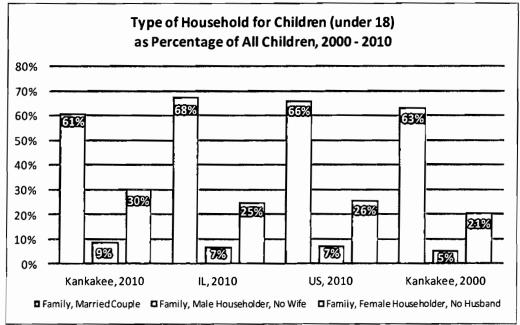

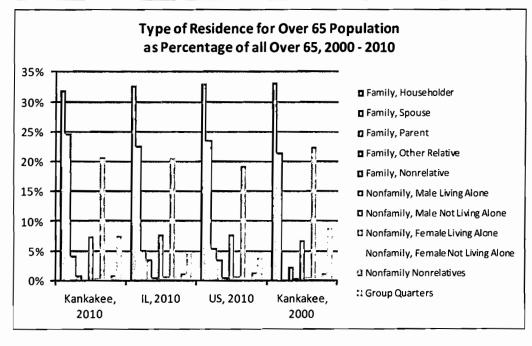

HOUSEHOLD STRUCTURE - CHILDREN AND ELDERLY

For households with children under 18, the percentage headed by a female increased in Kankakee County from 21% to 30% from 2000 to 2010. This percentage is higher than that of both Illinois and the U.S.

The type of residence for the Over 65 population in Kankakee County remained relatively unchanged from 2000 to 2010. The percentages in 2010 are similar to the Illinois and U.S. percentages except for the group quarters category, where Kankakee is higher.

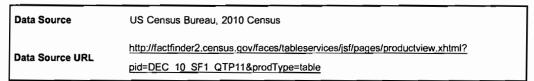

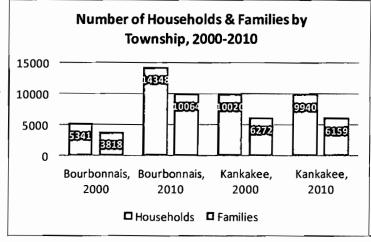

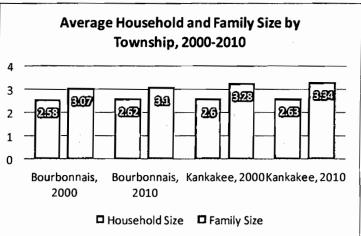

HOUSEHOLD CHARACTERISTICS OF KANKAKEE COUNTY TOWNSHIPS

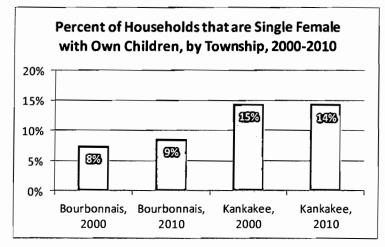

The number of households and families increased in Bourbonnais from 2000 to 2010 while Kankakee stayed relatively stable. Average household and family size stayed remained relatively unchanged in both townships.

Bourbonnais saw an increase in single female households from 2000 to 2010, going from 7.5% to 8.6%.

UNMARRIED PARTNER HOUSEHOLDS

Kankakee County saw an increase in unmarried partner households from 2000 to 2010 going from 5.5% to 6.6%. The percentage in 2010 was higher than that for Illinois and the U.S.

US Census Bureau, 2010 American Community Survey

Data Source URL

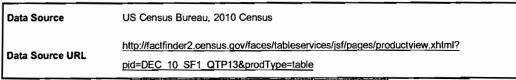

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

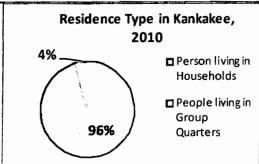

pid=ACS 10 1YR B11009&prodType=table

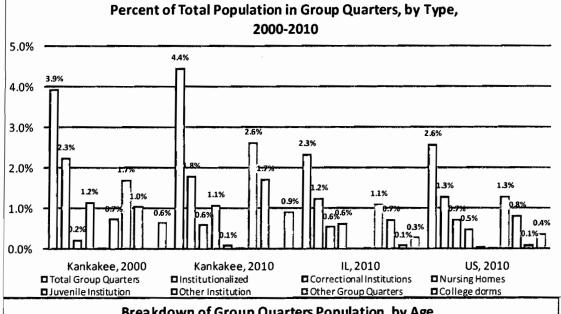

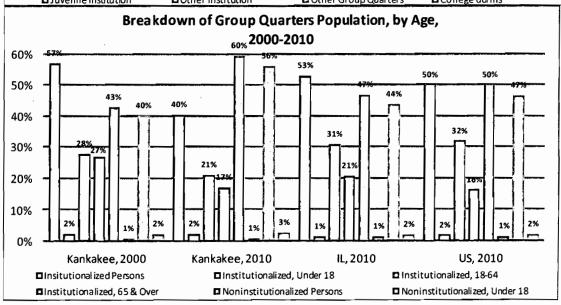

PERSONS IN GROUP QUARTERS

Four percent of Kankakee residents lived in group quarters in 2010. The percentage of persons living in group quarters in Kankakee County increased from 3.9 % in 2000 to 4.4% in 2010. This is above the Illinois percentage of 2.3% and 2.6%. The biggest change from 2000 to 2010 by age was in the non-institutionalized 18 to 64 group, going from 40% to 56%.

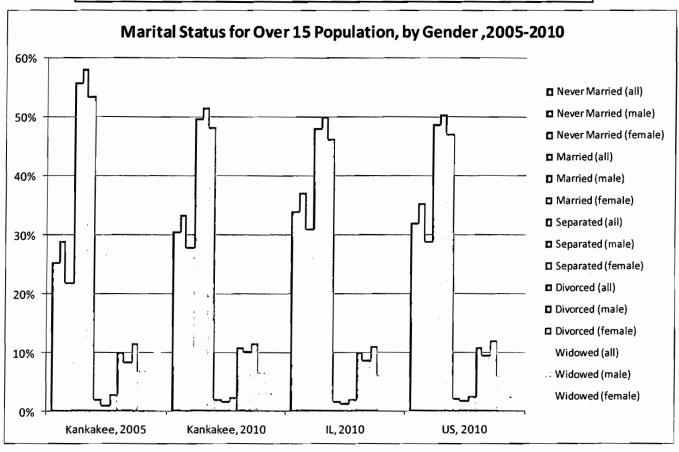

MARITAL STATUS

The percentages in the Never Married categories for both males and females increased from 25.3% in 2000 to 30.6% in 2010. All categories are relatively similar to those for Illinois and the U.S. in 2010.

CHAPTER 4

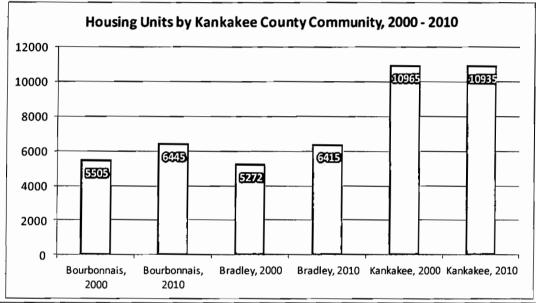

HOUSING

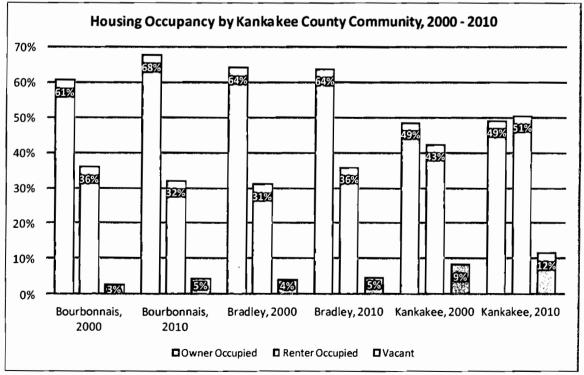

HOUSING UNITS AND OCCUPANCY

The number of housing units in Kankakee township held relatively steady from 2000 (10,965) to 2010 (10,935), while the number of units increased from 5,272 to 6,415 in Bradley, and from 5,505 to 6,445 in Bourbonnais.

The percentage of renter-occupied housing units increased in both Kankakee (42.6% to 50.7%) and Bradley (31.3% to 36.1%) but decreased slightly in Bourbonnais (36.2% to 32.2%) between 2000 and 2010.

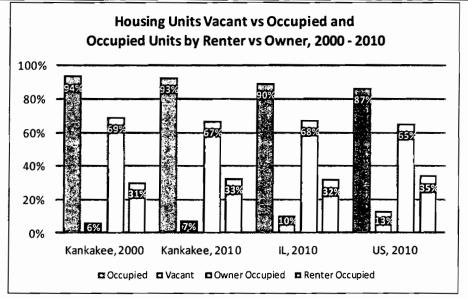

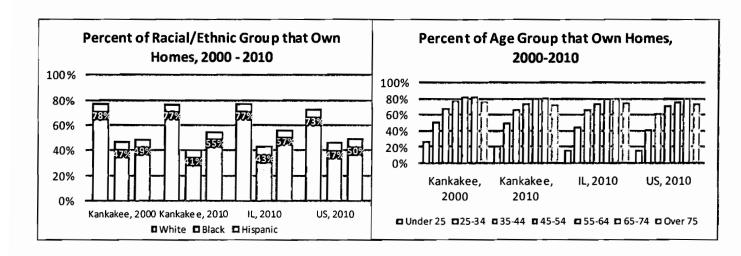

TENURE

The percentage of occupied homes went from 94.0% to 92.9% in the county from 2000 to 2010. Renter occupied homes increased from 30.6% to 33.0%; owner-occupied homes decreased from 69.4% to 67.0%.

Data Source URL	http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml? pid=ACS_10_1YR_DP04&prodType=table

ROOMS AND OCCUPANTS

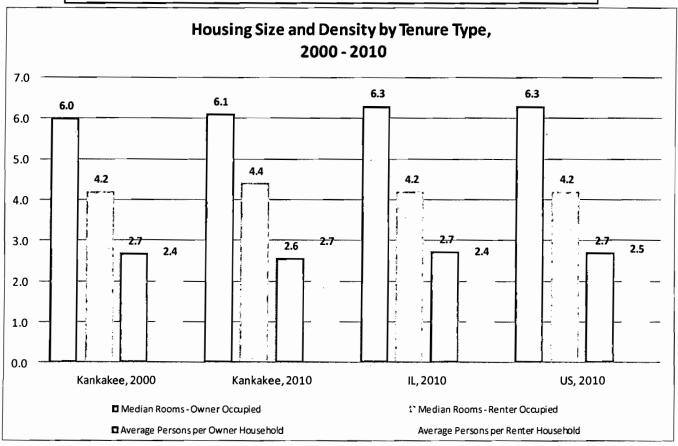

The average number of persons per owner-occupied household went down from 2.7 to 2.6 while the average number of persons per rented household increased from 2.4 to 2.7.

Data Source

US Census Bureau, 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=ACS 10 1YR B25021&prodType=table

HOME VALUE

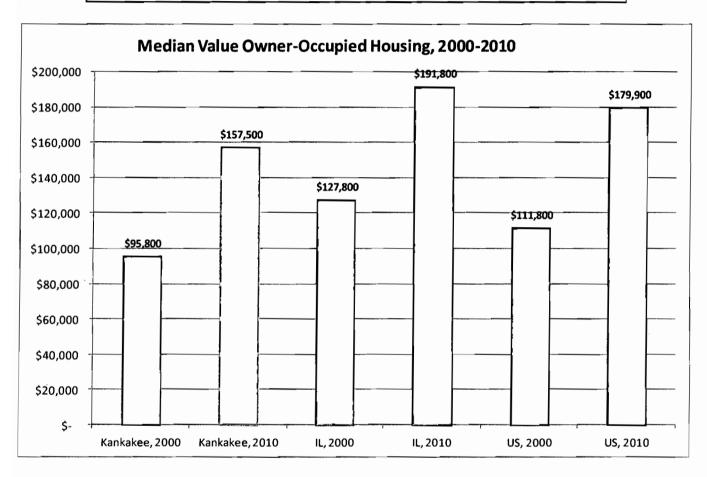

Median home value in Kankakee County went from \$95,800 in 2000 to \$157,500 in 2010, an increase of nearly 60%. The percentage increase in the Illinois values was about 41%.

Data Source

US Census Bureau, 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=ACS 10 1YR DP04&prodType=table

RENT

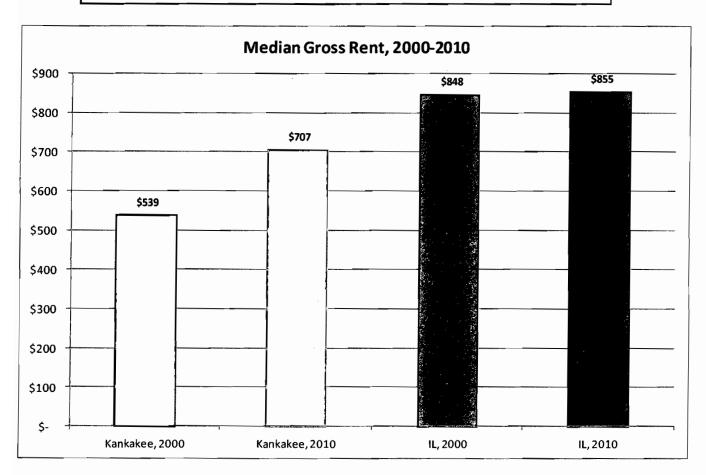

The median gross rent increased by 31% from \$539 to \$707 in Kankakee County from 2000 to 2010 but was still considerably below the Illinois median of \$848 or the U.S. median of \$855.

Data Source

US Census Bureau, 2010 American Community Survey

pid=ACS 10 1YR DP04&prodType=table

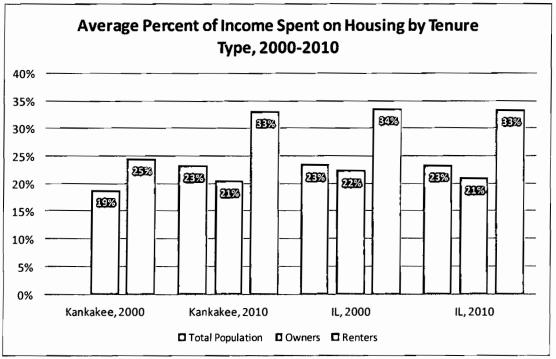

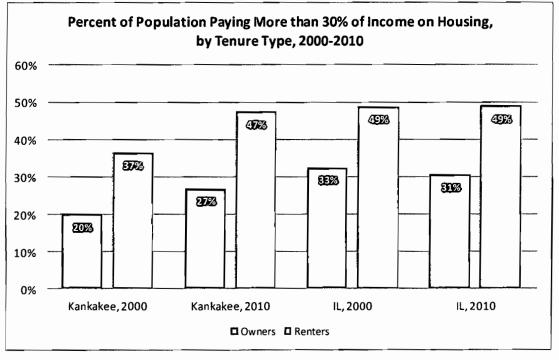

HOUSING COSTS RELATED TO INCOME

Kankakee does well on affordable housing compared to Illinois and the U.S. as a whole; however, almost 50% of renters have unaffordable housing, along with over 25% of home owners.

HOME HEATING FUEL

Over three quarters of homes in Kankakee County rely on utility gas (78%), while 13% rely on electric and 8% on LP gas.

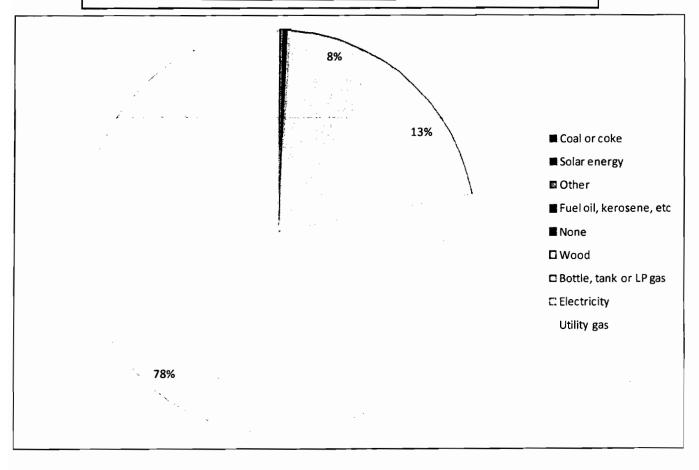

Data Source

US Census Bureau, 2008 - 2010 American Community Survey

CHAPTER 5

EDUCATION AND EMPLOYMENT

EDUCATIONAL ATTAINMENT

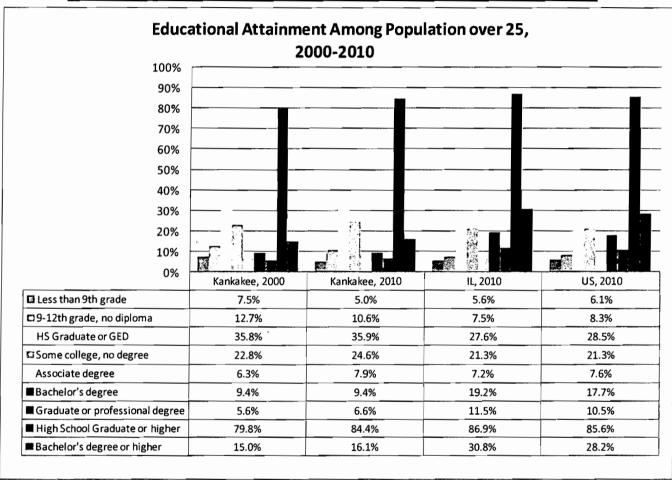

The percentage of individuals with a high school degree or higher increased in Kankakee County from 79.8% in 2000 to 84.4% in 2010, as did the percentage with a bachelor's degree or higher (15.0% to 16.1%). The percentages for both of those categories are lower than those for Illinois and the U.S. in 2010.

Data Source

US Census Bureau, 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=ACS_10_1YR_DP02&prodType=table

HIGH SCHOOL GRADUATION RATES

OVERALL AND BY RACIAL/ETHNIC COMPOSITION

Only one Kankakee school, Manteno, equaled the average Illinois graduation rate for all students (both at 87.8%) and for white students (97.9% and 93.3%, respectively). On the other hand, all but one school exceeded the average Illinois graduation rate of 78.0% for black students (Momence at 63.6%). Four schools had better than average Hispanic graduation rates, while Grant Park and Momence did much worse (66.7% and 60%, respectively). There is a great deal of variability between schools and within schools. Only two schools reported Asian populations (not shown); both exceeded the state average.

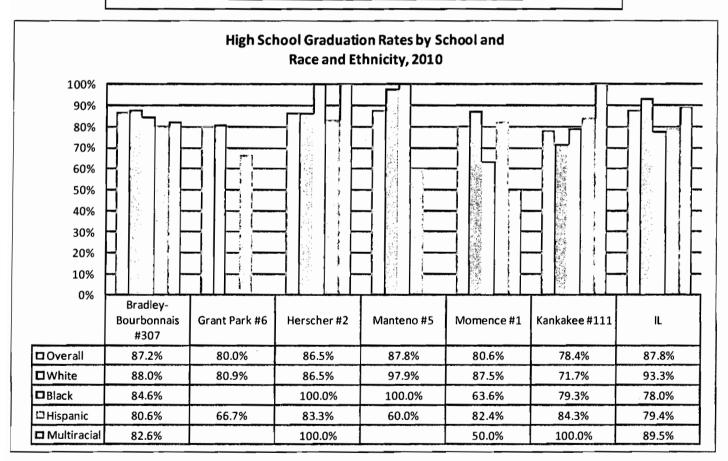

·K to 12 school include: #s111, 1, 5, 6 and 2

· Grade schools only include: #s 61, 53, 256, 258, 61 and 259

· High Schools only include: #s 302 and 307

Data Source Illinois State Board of Education

Data Source URL http://webprod.isbe.net/ereportcard/publicsite/getsearchcriteria.aspx

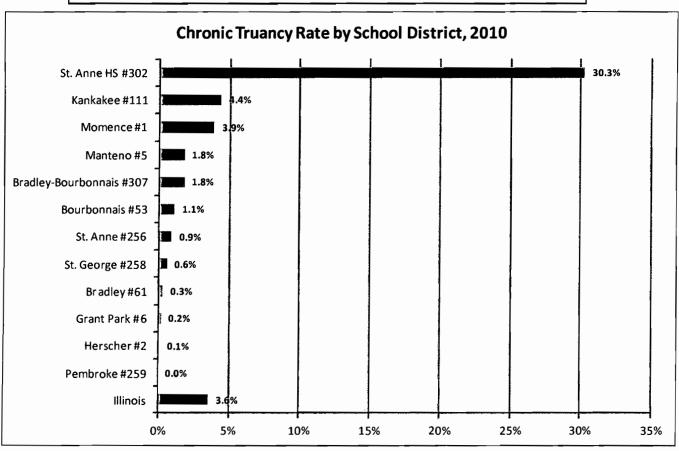

TRUANCY

All school districts show chronic truancy rates in 2010 that were below the Illinois rate of 3.6% except Kankakee # 111 at 4.4%, Momence # 1 at 3.9% and St. Anne #302, which was far above all others at 30.3%

=/-

SPECIAL EDUCATION ENROLLMENT

Six Kankakee County schools had a percentage of students with Individualized Education Programs (IEPs) that were higher than the Illinois percentage. For four of those six schools (Bradley-Bourbonnais # 307, Grant Park # 6 Monmence #I and St. Anne's #302) the difference was driven mostly by higher rates in the category of Specific Learning Disabilities, while for the other two schools (Herscher # 2 and Pembroke # 259) the difference was driven mostly by higher rates in the Speech/Language Impairment category.

EMPLOYMENT PARTICIPATION

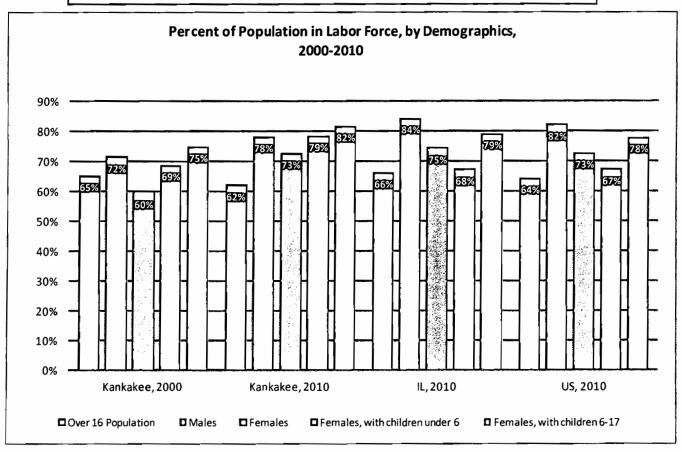

The percentages of females and males in the labor force in Kankakee County increased from 2000 to 2010 (females from 59.7% to 72.7%; males from 71.6% to 78.3%). The Over16 population in the labor force contracted slightly from 65.4% to 62.3%. In the categories of Females with children under 6 and Females with children 6 - 17, the percentage in the labor force increased in Kankakee County from 2000 to 2010 with Females with children under 6 increasing the percentage went from 68.9% to 78.5%. For women with children 6 to 17 the percentage increased from 75.0% to 81.7%.

EMPLOYMENT STRUCTURE

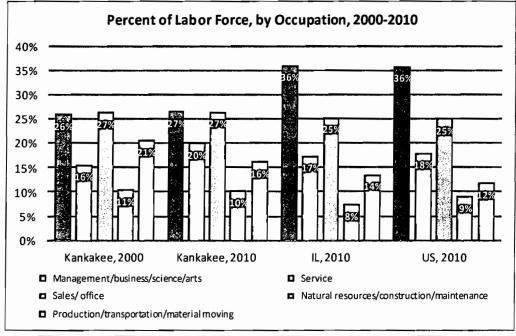

The percentages of Kankakee County residents in the five occupational categories represented below remained relatively unchanged from 2000 to 2010. The percentage of Kankakee County residents in the management, business, science and arts category is well below the percentages for Illinois and the U.S. Within Kankakee there was a shift from production/transportation to service occupations from 2000 to 2010. The percentage of private wage workers changed very little, decreasing from 81.8% in 2000 to 80.7% in 2010. These percentages are very similar to those for Illinois and a few percentage points above the U.S. The percentage of government workers increased from 12.9% to 13.4%.

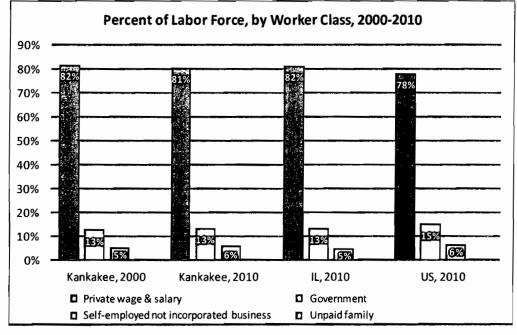

Data Source

US Census Bureau, 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=ACS_10_1YR_DP03&prodType=table

EMPLOYMENT STRUCTURE

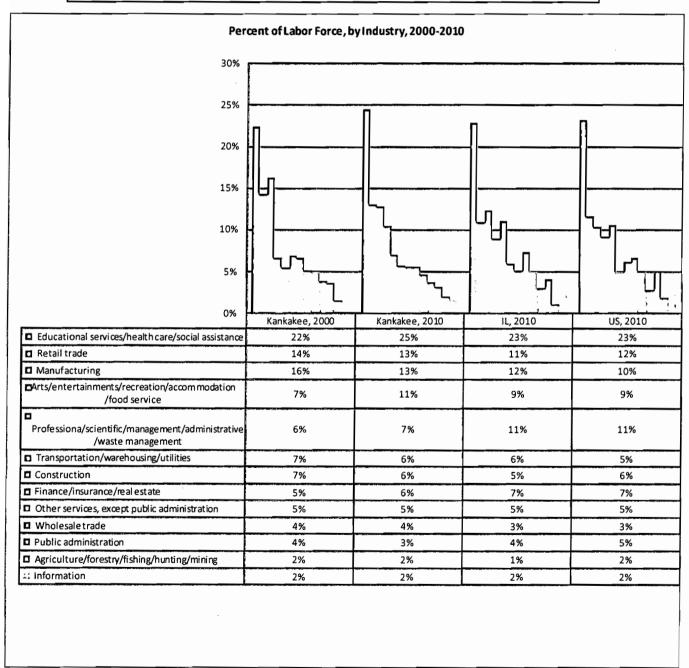

From 2000 to 2010 the categories showing the greatest increase in Kankakee County were 1) educational services, health care and social services (22.4% to 24.5%) and 2) arts, entertainment and recreation, and accommodation and food services (6.7% to 10.5%). The two categories that showed the greatest decrease were 1) manufacturing (16.3% to 12.8%) and 2) retail trade (14.3% to 13.0%).

Data Source

US Census Bureau, 2010 American Community Survey

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

pid=ACS_10_1YR_DP03&prodType=table

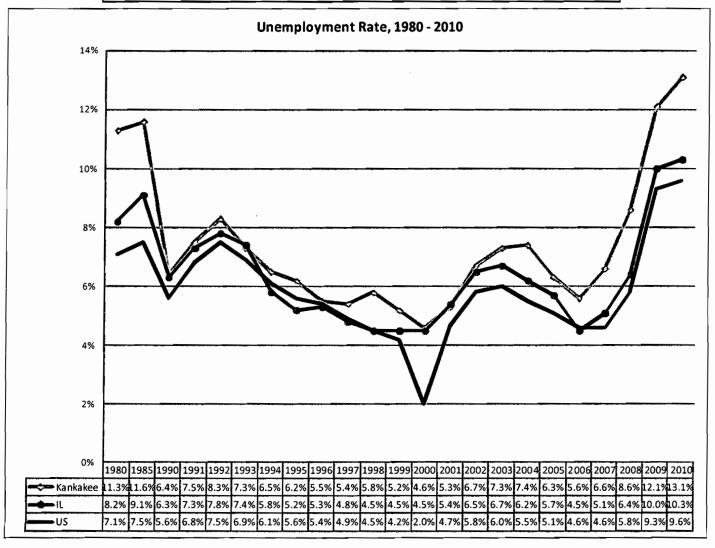

UNEMPLOYMENT

The unemployment rate in Kankakee County has been above the Illinois and U.S. rates from 2006 to 2010, when all three rates climbed steeply. In 2010, the unemployment rate in Kankakee County was 13.1%, compared to 10.3% in Illinois and 9.6% in the U.S.

Data Source Illinois Department of Employment Security

Data Source URL http://lmi.ides.state.il.us/laus/historicalMonthly.htm

UNEMPLOYMENT CHARACTERISTICS

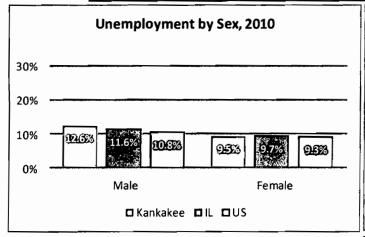

The unemployment rates for males in Kankakee County in 2010 was 12.6%, compared to 11.6% and 10.8% in Illinois and the U.S. respectively. The female rate was slightly lower that the state and national rates. Blacks in Kankakee County had an unemployment rate of 24.5% compared to 22.1% for Illinois and 17.9% for the US. Kankakee County had slightly higher rates of unemployment in the 16 - 19, 25 - 44 and 45 - 64 age categories than the state and national rates in 2010. Kankakee residents with less than a high school education had a considerably higher unemployment rate than in Illinois and the U.S.

pid=ACS_10_1YR_S2301&prodType=table

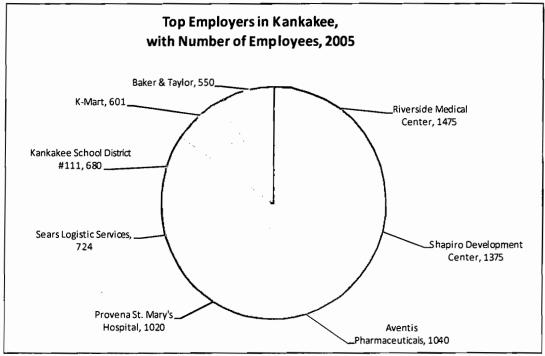

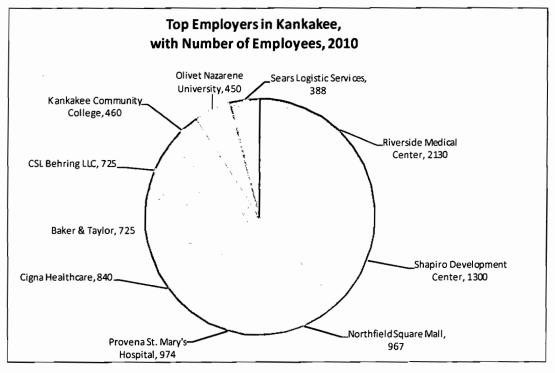

LEADING EMPLOYERS

The figures below provide data on the leading employers in Kankakee County for both 2005 and 2010. Riverside Medical increased from 1,475 to 2,130 employees, while Sear Logistics went down from 724 to 388 employees. The company listed in 2005 as Aventis appears in the 2010 chart as CSL Behring. A new Cigna processing center opened and appears in the 2010 chart with 840 employees.

 Kankakee Regional Chamber of Commerce

 Data Source URL
 http://www.kankakee.org/Relocation/Major_Employers.aspx

+

COMMUTING PATTERNS

In 2010 77.3% of Kankakee residents worked in the county, compared to 78.2% in 2000. The 2010 percentage is higher than the state (73.4%) and the US (72.6%).

There was little change in commuting patterns in Kankakee County from 2000 to 2010, with mean commuting time decreasing from 23.6 to 22.8 minutes compared to 25.3 for the US.

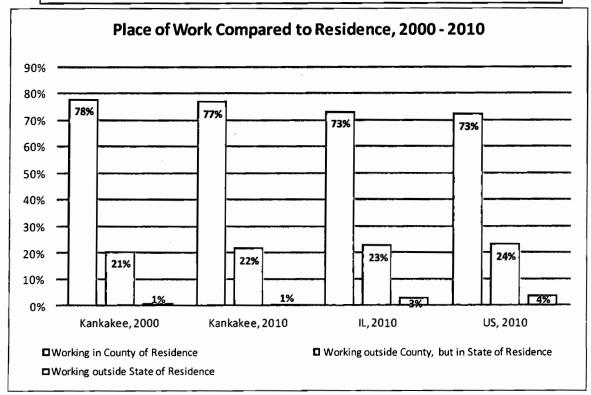

The means of commuting was almost unchanged from 2000 to 2010 with about eight out of every ten people using a car or truck.

pid=ACS 10 1YR S0801&prodType=table

-/=

EDUCATION AND EMPLOYMENT BY TOWNSHIP

The percentage of persons in Kankakee Township with a high school degree or higher increased from 68.3% to 75.8% from 2000 to 2010. The percentage with a bachelor's degree or higher decreased from 13.2% to 10/9%. In Bourbonnais, the percentage of persons with a high school degree or higher also increased slightly during this period (from 88.9% to 89.3%), but the percentage with a bachelor's degree or higher decreased from 26.7% to 23.4%. Unemployment rates increased in both communities, with Kankakee increasing from 13.2% to 10.9% and Bourbonnais increasing from 6.8% to 9.1%. The percentage of persons in the labor force in Kankakee increased from 59.5% to 62.5%, but decreased from 74.1% to 69.9% in Bourbonnais during this period.

CHAPTER 6

INCOME AND POVERTY

MEDIAN INCOME BY FAMILY,

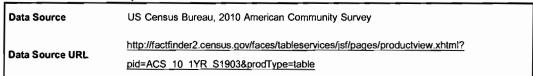

HOUSEHOLD, RACE AND ETHNICITY

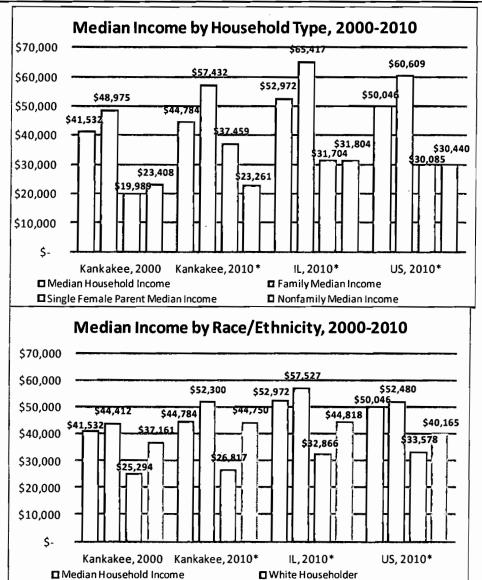

Median household income for Kankakee County increased from \$41,532 to \$44,784 between 2000 and 2010. The 2010 median income is below the median for Illinois (\$52,972) and the U.S. (\$50,046). Median income increased both for whites (from \$44,412 to \$52,300) and Hispanics (from \$37,161 to \$44,750) during this time. Median income for blacks increased from \$25,294 to \$26,817 in 2010, lower than the median income for both Illinois and the U.S. (\$32,866 and \$33, 578, respectively).

Median income in Kankakee County increased for three of the four categories represented in the second graph, with non-family median income remained almost constant. With the exception of single female parents, the median income for Kankakee County households was lower than Illinois and the U.S. for all categories

* in 2010 US inflation adjusted dollars.

■ Black Householder

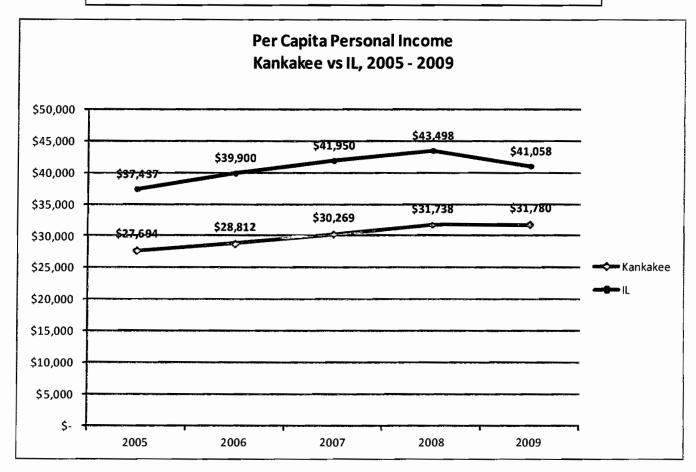

☐ Hispanic Householder

PER CAPITA PERSONAL INCOME

Per capita personal income in Kankakee County has been on a trajectory that mirrors that of the state over the 2005 to 2009 time period though about \$10,000 below the Illinois number each year. The Illinois number decreased by over \$2,000 from 2008 (\$43,498) to 2009 (\$41, 058) while the Kankakee number remained almost unchanged (\$31, 738 to \$31,780).

Data Source US Department of Commerce Bureau of Economic Analysis

Data Source URL http://www.bea.gov/iTable/iTable.cfm?ReqID=70&step=1

POVERTY BY AGE AND RACE/ETHNICITY

The overall poverty rate in Kankakee County increased from 11% in 2000 to 14% in 2010. In 2010, the poverty rate for both all persons and persons under 18 were lower than the rates for Illinois and the U.S. The 2010 poverty rate for those over 65 in Kankakee County was slightly higher than the state and the same as the nation (9%).

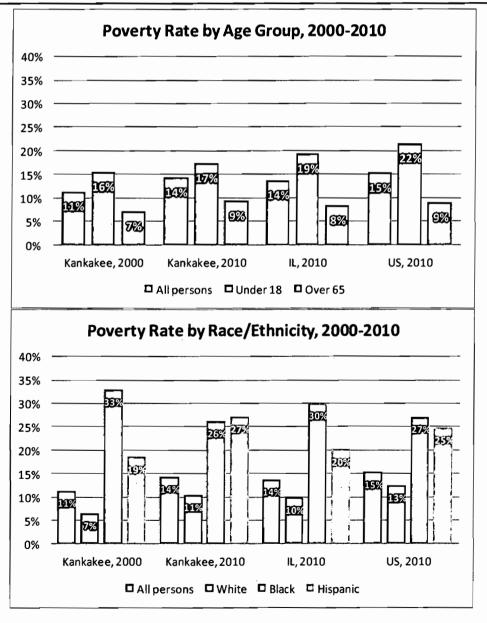

Between 2000 and 2010, the poverty rate for whites increased from 7% to 11% and the rate for Hispanics increased from 19% to 27%. The rate for blacks decreased from 33% to 26% during that same period.

The 2010 poverty rate for blacks in Kankakee County was lower than in Illinois and the U.S., while the rate for Hispanics was higher than that for the state and the nation. The 2010 poverty rate for whites was very similar to the Illinois and U.S. rates.

pid=ACS_10_1YR_S1701&prodType=table

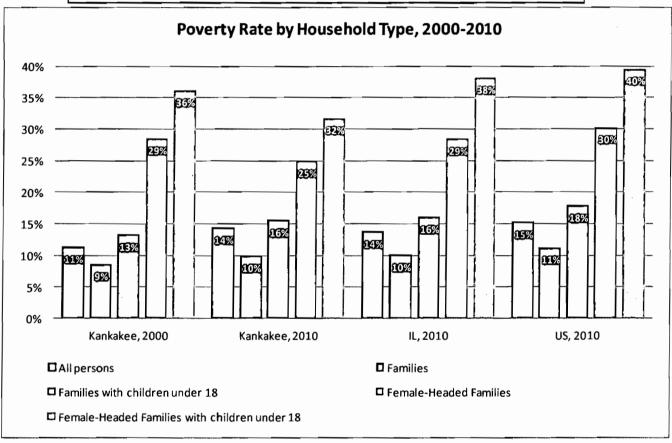

POVERTY BY HOUSEHOLD TYPE

The poverty rates for female-headed households and female-headed households with children under 18 both declined from 2000 to 2010 in Kankakee County, going from 29% to 25%, and 36% to 32%, respectively. The rates for all families and for families with children under 18 increased from 9% to 10% and 13% to 16%, respectively. The poverty rates for all family types were below or very near the rates for both Illinois and the U.S. in 2010.

Data Source US Census Bureau, 2010 American Community Survey

MEDICAID RECIPIENTS

During the period from 2005 to 2010, the percentage of all residents of Kankakee County and the percentage of children enrolled in Medicaid were both slightly higher than the Illinois average, following the same upward trend. In 2010, the percentage of Kankakee County children enrolled was 51%, compared to 52% for the state. The percentage of Kankakee County adults enrolled in Medicaid was 23%, compared to 21% for Illinois.

Data Source URL Illinois Department of Healthcare and Family Services

http://www2.illinois.gov/hfs/agency/Program%20Enrollment/Pages/kankakee.aspx

CHAPTER 7

NATALITY

BIRTHS AND FERTILITY

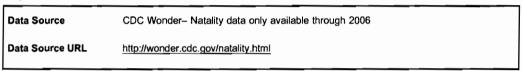

The birth rate per 1,000 women from 2000 to 2006 was very similar between whites in Kankakee County (77.1 in 2010) and Illinois (77.0 in 2010).

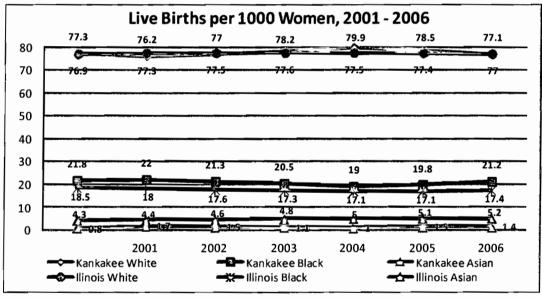

For the period 2001 to 2006, the rate for Kankakee blacks was slightly higher than the statewide rate for blacks, while the rate for Asians in Kankakee County was somewhat lower than the statewide rate for Asians.

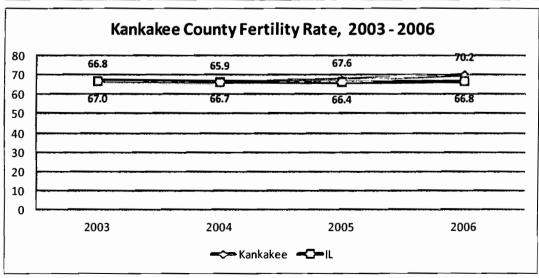

In 2010, the birth rate for blacks in Kankakee was 21.2, compared to 17.4 in Illinois. The birth rate for Asians was 1.4, compared to 5.2 for the state.

The fertility rate for Kankakee County women was similar to the Illinois rate in 2003 and 2004. The Kankakee rate increased to 67.6 and 70.2 in 2005 and 2006 respectively, while the Illinois rate remained relatively steady at 66.4 and 66.8 for those years.

The fertility rate is defined as the number of births per 1,000 women of childbearing years (ages 15 - 44).

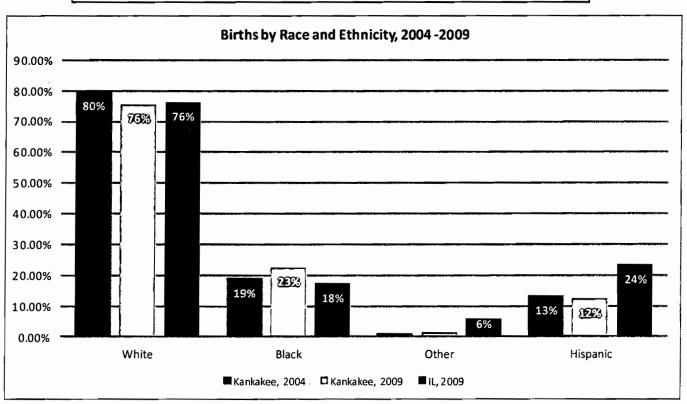

BIRTHS BY RACE AND ETHNICITY

The percentage of Kankakee County births to whites fell from 80% in 2004 to 76% in 2009. The percentage of births to blacks increased from 19% in 2004 to 23% in 2009 and was slightly above the Illinois rate of 18% in 2009. The percentage of births to Hispanics went down slightly from 13% in 2004 to 12% in 2009 and was considerably below the state percentage (24%).

Data Source Illinois Department of Public Health

Data Source URL http://app.idph.state.il.us/iplandatasystem.asp?menu=1

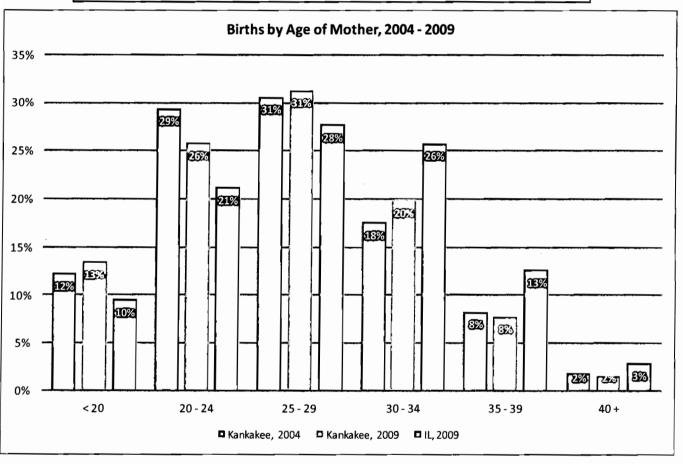

BIRTHS BY AGE OF MOTHER

For the three youngest age categories (younger than 20, ages 20 - 24, and ages 25 - 29) Kankakee had higher birth rates in both 2004 and 2009 than the rate for Illinois in 2009. The Illinois birth rates were higher for each of the older age categories.

The 2009 birth rate for mothers younger than 20 was 13% and 12% for Kankakee and Illinois, respectively. The rate for the 20 - 24 age group was 26% in Kankakee and 29% statewide; for the 25 - 29 age group, 31% in Kankakee and 28% statewide; for the 30 - 34 age group, 20% in Kankakee and 26% statewide; for the 35 - 39 age group, 8% in Kankakee and 13% statewide; for the 40+ age group, 2% in Kankakee and 3% statewide.

Data Source Illinois Department of Public Health

Data Source URL http://app.idph.state.il.us/iplandatasystem.asp?menu=1

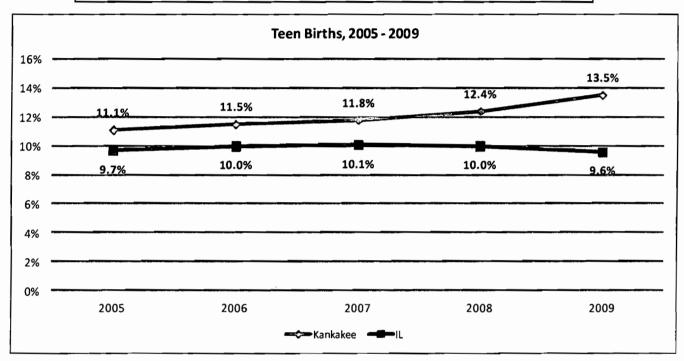

TEEN BIRTHS

The percentage of births to teens in Kankakee County was consistently one to two points above the Illinois percentage from 2005 to 2009. Moreover, while the state percentage held steady before declining slightly in 2009, the Kankakee percentage increased to 13.5% in 2009, 3.9 points above the Illinois rate of 9.6%.

Data Source Illinois Department of Public Health

Data Source URL http://app.idph.state.il.us/iplandatasystem.asp?menu=1

BIRTHS TO UNMARRIED MOTHERS

The percentage of births to unmarried mothers in Kankakee County was constantly 5.8 to 7.7 points above the Illinois percentage from years 2000 to 2004. The IPLAN Data System is missing data for 2005 and 2006, therefore the final data point in the graph represents a 5 year estimate over the years 2006 to 2010 calculated by the American Community Survey.

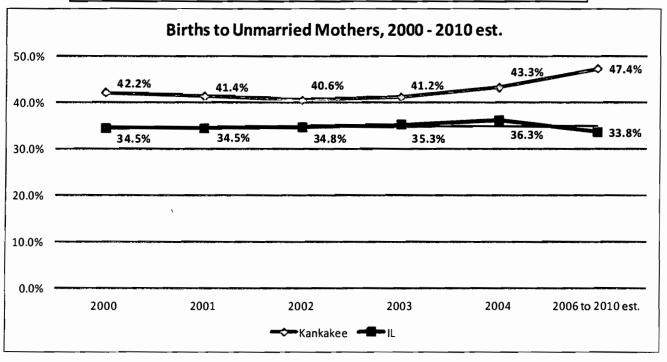

Data Source IPLAN Data System; Kankakee Analysis

http://app.idph.state.il.us/iplandatasystem.asp?menu=1

US Census Bureau, 2006 - 2010 American Community Survey

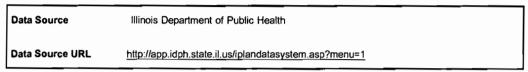

http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?

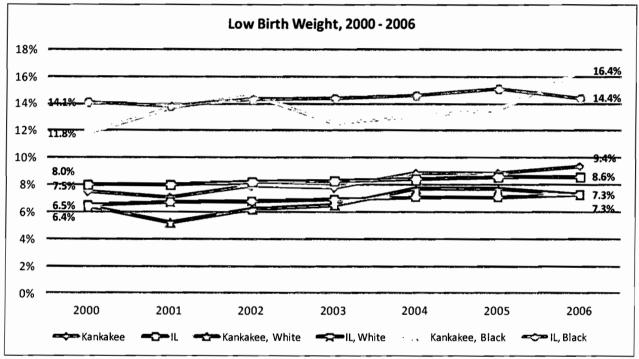

pid=ACS 10 5YR S1301&prodType=table

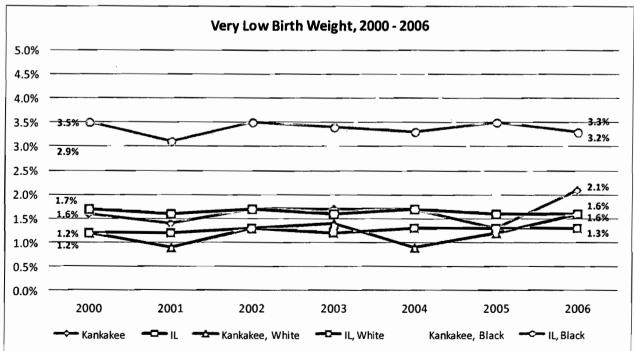

LOW AND VERY LOW BIRTH WEIGHT

Low Birth Weight refers to infants weighing less than 2500 grams at birth. The Low Birth Weight percentage for the black population in Kankakee County was 16.4%, compared to 14.4% for the state and 7.3% for the Kankakee white population. Very Low Birth Weight refers to infants weighing less than 1500 grams at birth. The Very Low Birth Weight percentages in Kankakee County are similar to the percentages for Illinois. The percentages of Very Low Birth Weight infants are higher in the black population in both Kankakee County and Illinois.

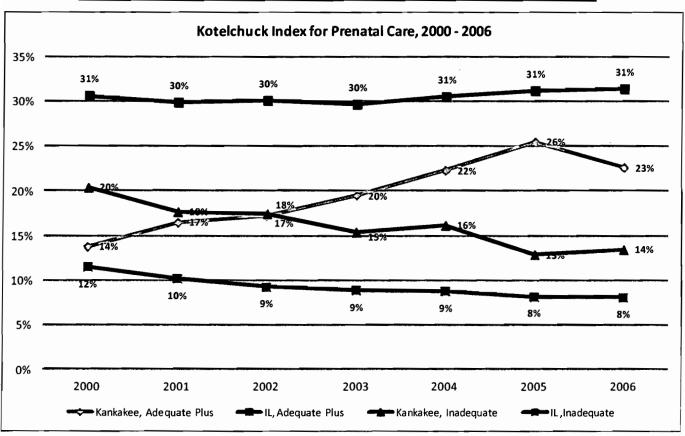

PRENATAL CARE

The Kotelchuck Index attempts to characterize prenatal care (PNC) utilization on two independent and distinctive dimensions - namely, adequacy of initiation of PNC and adequacy of received services (once PNC has begun). This index does not assess quality of the prenatal care that is delivered, only its utilization. The data for calculating the Kotelchuck Index is extracted from birth certificates.

The percentage of Kankakee County women receiving Adequate Plus care on the Kotelchuck Index was well below the state percentage of 31% in 2006, although it steadily improved from 14% in 2000 to 23% in 2006. The percentage of Kankakee County women receiving Inadequate care has been above the Illinois percentage though it has been steadily declining. In 2006, the Kankakee percentage was 14%, compared to the Illinois percentage of 8%.

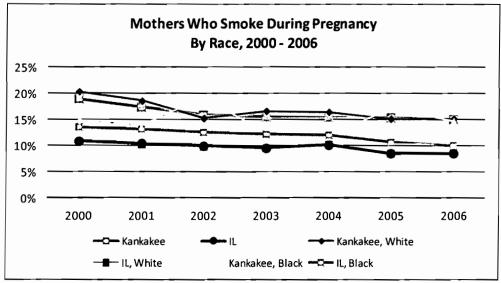

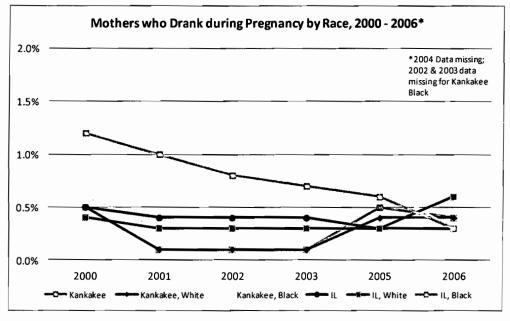

RISK BEHAVIOR DURING PREGNANCY

The percentage of Kankakee County women who smoked during pregnancy declined from 19% in 2000 to 15% in 2006, but was higher than the Illinois rate for that period. In 2006, the percentage of white pregnant women who smoked during pregnancy in Kankakee was 15%, well above the Illinois rate of 9%. The percentage of black women who smoked during pregnancy was more variable over this period, but also stood at 15% in 2006.

The percentage of Kankakee County women who drank during pregnancy was below the Illinois percentage, but increased in recent years to 0.5% in 2005 and 0.4% in 2006, compared to 0.3% in 2005 and 0.6% in 2006 in Illinois. The percentage of Kankakee County white women who drank during pregnancy was below the Illinois percentage for most of this period but increased by 2006 to 0.4%, compared to 0.3% for Illinois. Percentages for black women in Kankakee and Illinois were almost identical in 2005 and 2006.

-/=

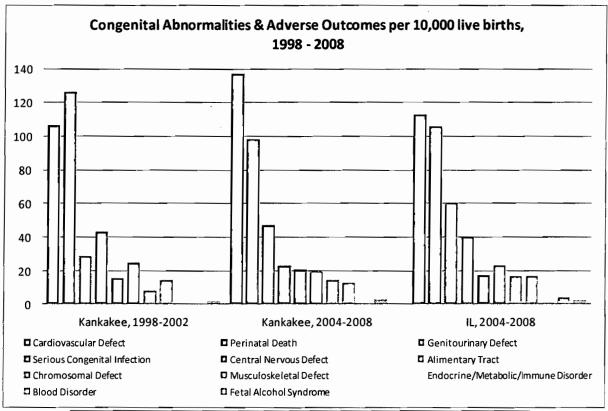

INFANT MORTALITY AND BIRTH DEFECTS

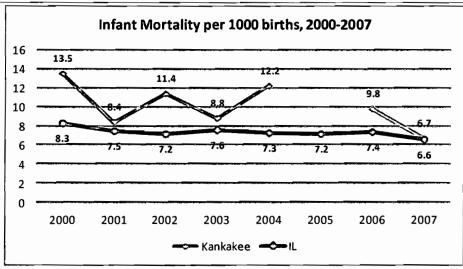

The leading cause of congenital abnormalities and adverse outcomes was cardiovascular defects, which increased in Kankakee County from 106.8 per 10,000 live births in the period 1998 to 2002 to 137.0 in the period 2004 to 2008. This compares with the state rate in 2004 to 2008 of 112.9. The second adverse outcome was perinatal death, which decreased in Kankakee County from 126.3 to 98.6 compared to 105.7 for the state. The Infant Mortality Rate for Kankakee County was higher than that for the state in each year from 1998 to 2006, though in 2007 the two rates were practically identical at 6.7% for Kankakee and 6.6% for Illinois.

PREGNANCY TERMINATIONS

The number of terminated pregnancies in Kankakee County was far below that for the state from 2005 to 2009. Kankakee numbers per 1000 live births ranged from 76.2 in 2000 to 80.9 in 2009, while the Illinois rate ranged from 248.0 to 269.3 during that same period.

Data Source Illinois Department of Public Health

Data Source URL http://www.idph.state.il.us/health/abortion/abort09.htm

CHAPTER 8

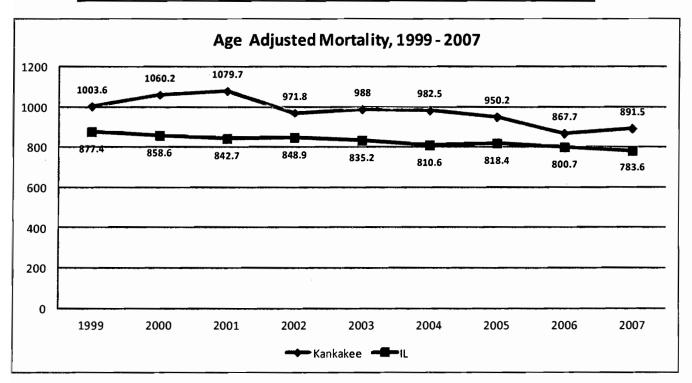

MORTALITY

DEATHS

The age adjusted mortality rate for the overall population in Kankakee County was higher than the Illinois rate every year from 2000 to 2007, with the difference ranging from a low of 67 per 100,000 in 2006 to a high of 201 per 100,000 in 2001. In 2007, the Kankakee rate was 891.5 per 100,000 compared to 783.6 per 100,000 for the state, a difference of 107.9 per 100,000.

Data Source CDC Wonder- Latest mortality data available through CDC Wonder is for 2007

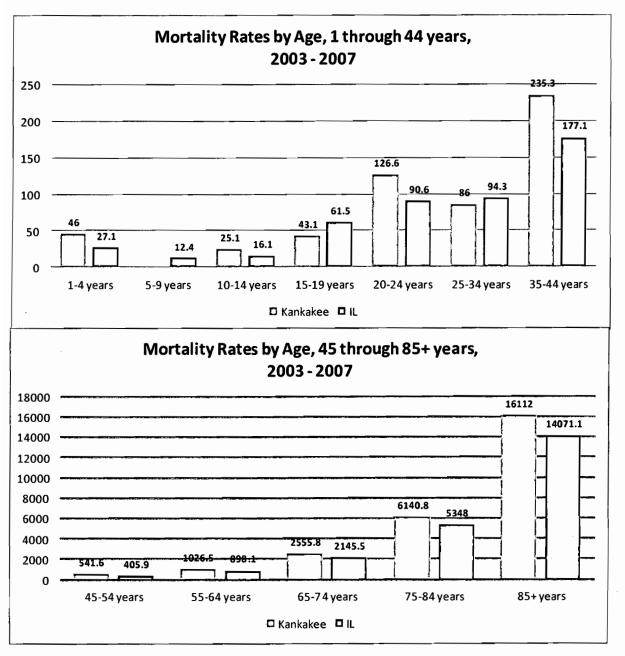

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

DEATHS BY AGE

Because of the relatively low numbers of deaths in some of the age categories for Kankakee County, it was necessary to aggregate five years worth of data. Even so, the rate for the 5 - 9 age category was suppressed (no data) and the rates for the age categories I - 4 years, I0 - I4 years and I5 - I9 years are considered unreliable by CDC standards. Because there is such great variance across the age categories two graphs are displayed below to keep the much higher rates associated with the older age categories from overwhelming the data in the other categories. In the younger age categories, Kankakee County has higher rates than Illinois in all but one category (20 to 24) with the biggest difference in the 35 to 44 category where Kankakee is at 235.3 and Illinois is at 177.1. In the older age categories, mortality is just slightly higher in each category with the largest difference in the 85 and over category where Kankakee is at 16,112 and Illinois is at 14,071.

LEADING CAUSES OF MORTALITY

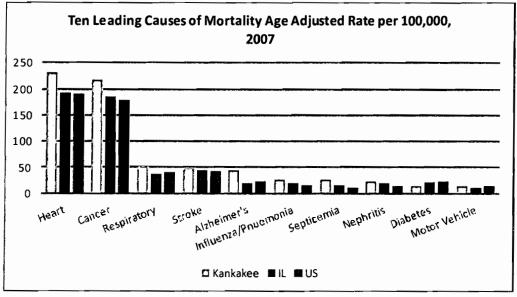

OVERALL AND BY SEX

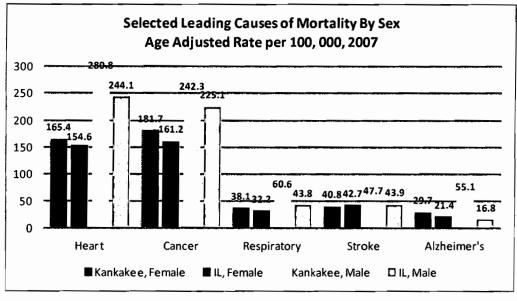

The age-adjusted rates for ten leading causes of mortality are presented below in the rank that they appear for Kankakee County. The Kankakee rate is higher than the Illinois rate for nine of these ten categories, and higher than the U.S. rate for eight of the ten. For the leading cause, heart disease, the Kankakee rate was 231.2, compared to 192.9 for the state; for cancer, Kankakee was 217.3, compared to 186.0 for Illinois; and for respiratory disease, Kankakee was 50.7 compared to 36.7 for the state.

Overall, Kankakee males have higher rates of mortality than Kankakee females for five of the leading causes and Kankakee County males rate higher for all causes than Illinois males. Kankakee females have higher rates than Illinois females for 4 of the 5 causes, with Stoke being the exception, though the rates for stroke are almost identical. For heart disease Kankakee males had a rate of 280.8 compared to 165.4 for females. For cancer males had a rate of 242.3, the female rate was 181.7.

Data Source CDC Wonder- Latest mortality data available through CDC Wonder is for 2007

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

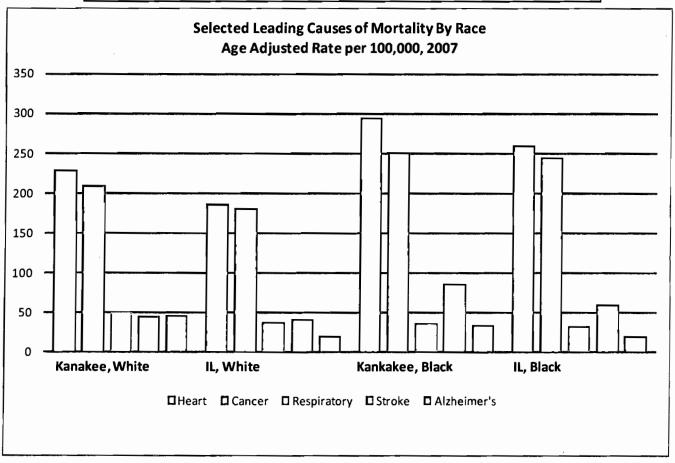

LEADING CAUSES OF MORTALITY BY RACE

The graph below shows that both whites and blacks in Kankakee County have higher mortality rates for the leading causes than their Illinois counterparts, the one exception being a slightly lower rate for Kankakee blacks for Alzheimer's disease. Within Kankakee County blacks have much higher rates than whites for heart disease (black 295.5; white 228.4); cancer (black 251.2; white 210.2) and Stroke (black 86.8; white 45.6). Whites have higher rates for respiratory disease and Alzheimer's disease, though these differences are much smaller.

Data Source CDC Wonder – Latest mortality data available through CDC Wonder is for 2007

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

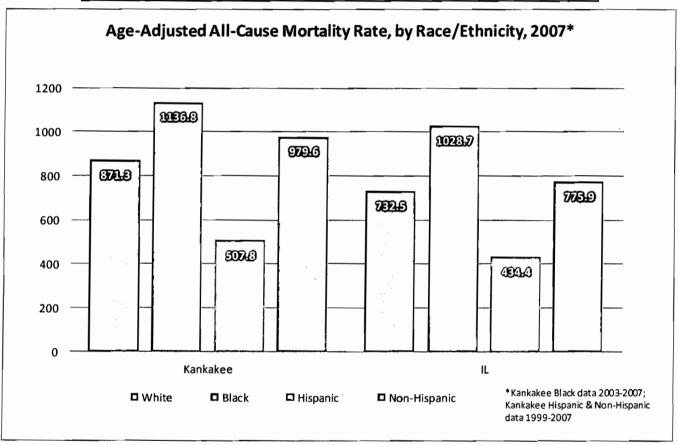

LEADING CAUSES OF MORTALITY BY ETHNICITY

Kankakee County residents had higher age adjusted mortality for all race and ethnic categories. Because of small numbers in some categories different periods of time had to be aggregated for different groups with 2007 as the latest comparison data. Kankakee whites had a rate of 871.3, compared to 732.5 for the state; Kankakee blacks had a rate of 1136.8, compared to 1028.7; Kankakee Hispanics had a rate of 507.8, compared to 434.4; Kankakee Non-Hispanics had a rate of 979.6 compared to 775.9.

Data Source CDC Wonder- Latest mortality data available through CDC Wonder is for 2007

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

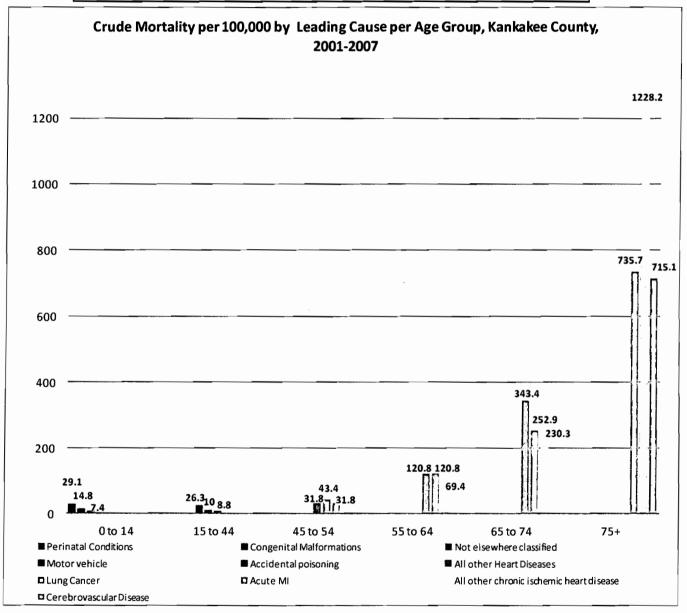

LEADING CAUSES OF MORTALITY BY AGE

The leading causes of mortality in Kankakee County are presented in the table below by age categories. Because of the relatively small numbers that result when looking at age categories at the county level and the suppression of small numbers as a result, the data has been aggregated over the period 2001 to 2007. The three leading causes for each age group are presented.

Data Source CDC Wonder- Latest mortality data available through CDC Wonder is for 2007

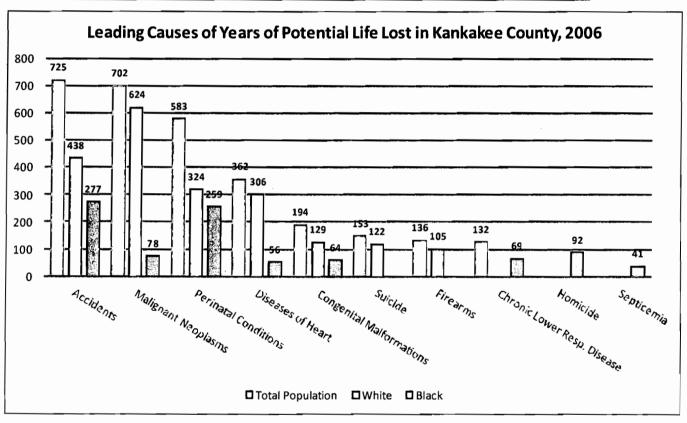

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

PREMATURE MORTALITY

The graph below presents data on the eight leading causes of Years of Potential Life Lost for the total population, the top seven categories for whites and the top eight categories for blacks in 2006. These data show that the profile for the total population and the two racial categories vary quite a bit. For example, homicide and septicemia appear in the top eight causes for blacks but not for the total population or whites, while suicide is one of the leading causes for whites and the total population but not for blacks. The leading cause overall was for accidents at 725. The leading cause for whites was cancer (malignant neoplasm) at 624. The leading cause for blacks was accidents at 277 followed closely by perinatal conditions at 259.

Firearm deaths can be due to different causes or intentions, specifically homicide, suicide, unintentional injuries, and undetermined injury (i.e., not determined if the death was due to homicide, suicide or accident)

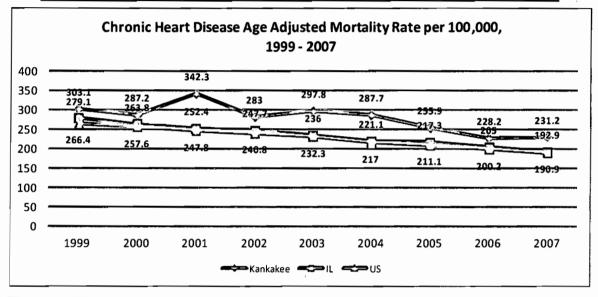

CHRONIC HEART DISEASE MORTALITY

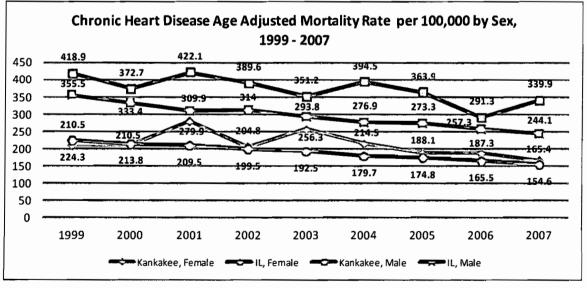

OVERALL AND BY SEX

The Kankakee rate for chronic heart disease mortality was higher than the state and national rate for the period 1999 to 2007. In 2007, the Kankakee rate was 231.2, compared to the state at 192.9 and the U.S. at 190.9. The rate for Kankakee males was above the state rate while the Kankakee and Illinois rates for females was much more similar. In 2007, Kankakee males had a rate of 339.9 compared to 244.1 for the state; Kankakee females had a rate of 165.4 compared to 154.6 for Illinois.

Data Source CDC Wonder- Latest mortality data available through CDC Wonder is for 2007

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

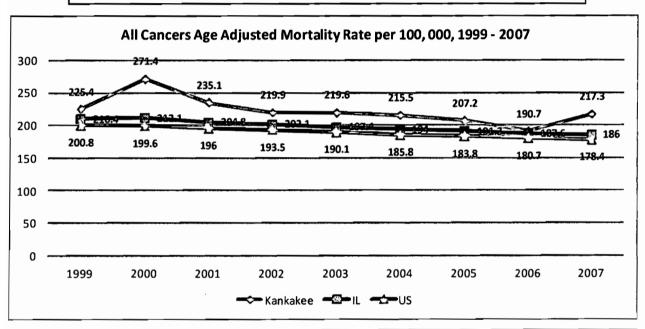

ALL CANCERS MORTALITY

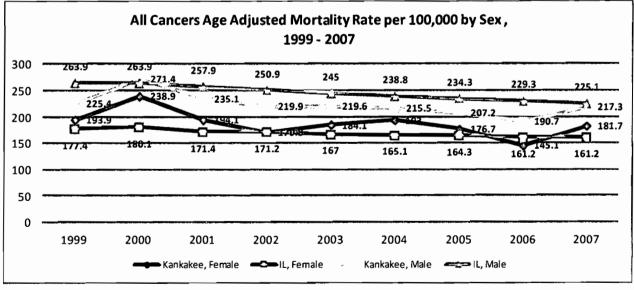

OVERALL AND BY SEX

The Kankakee mortality rate for all cancers was slightly higher than the state and national rate for the period 1999 to 2007. In 2007 the Kankakee rate was 217.3, the state rate was 186.0 and the U.S. rate was 178.4. The Kankakee rates for males and females were similar to the Illinois rates. In 2007 Kankakee males had a rate of 217.3 compared to the state rate of 225.1. Kankakee females had a 2007 rate of 181.7 compared to the state rate of 161.2.

Data Source CDC Wonder-- Latest mortality data available through CDC Wonder is for 2007

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

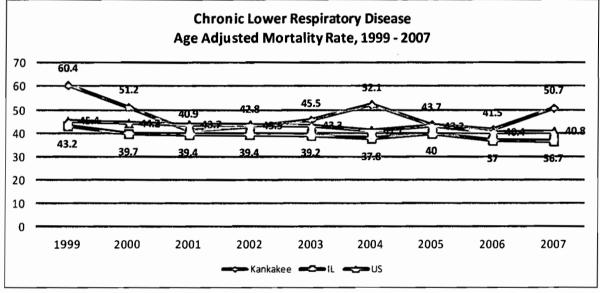

=/-

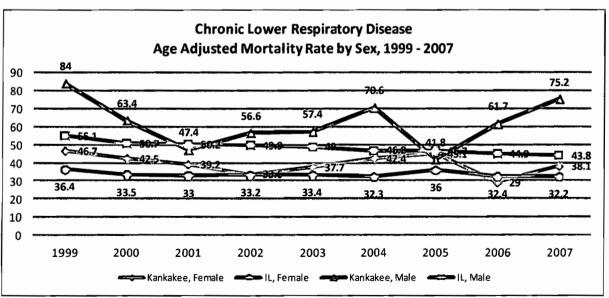

CHRONIC LOWER RESPIRATORY DISEASE

MORTALITY OVERALL AND BY SEX

The age-adjusted mortality rates due to Chronic Lower Respiratory Disease are presented below for Kankakee County, Illinois and the U.S. and by sex for Kankakee County and the state. The Kankakee County rate was above the Illinois and U.S. rates for most years during the period from 1999 to 2007. The Kankakee rate in 2007 was 50.7, compared to 36.7 for the state and 40.8 for the U.S. The rates for both males and females were above the Illinois rates for seven of the nine years in this period. In 2007 the rate for Kankakee males was 75.2 compared to 43.8 for the state; the rate for Kankakee females was 38.1, compared to 32.2 for the state.

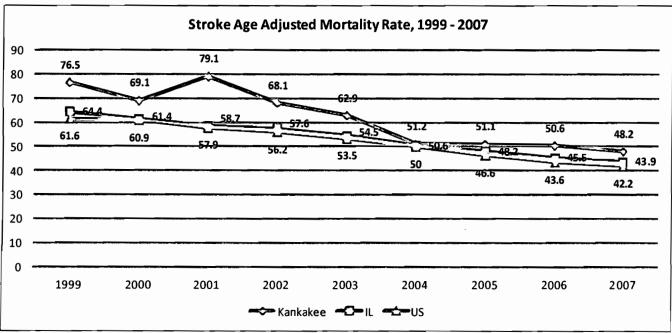

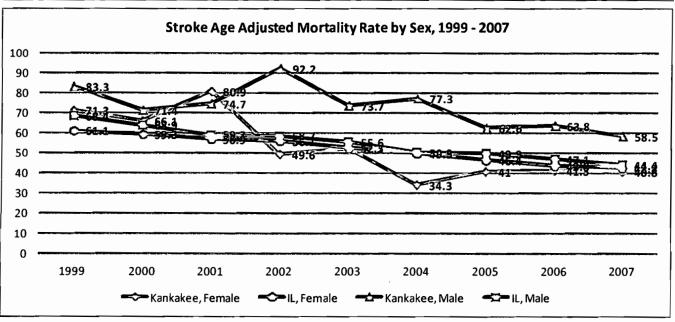

STROKE MORTALITY OVERALL AND BY SEX

The figures below provide data on the age adjusted mortality rate due to stroke in Kankakee County and Illinois for the total population and by sex. The Kankakee County rate for the total population was above the Illinois rate every year but one since 1999, although the differences have been small in recent years. In 2007, the Kankakee rate was 48.2 compared to 43.9 for the state and 42.2 for the U.S. The rates for Kankakee County males were above the Illinois male rates every year during this time period. In 2007, the rate for Kankakee County males was 58.5 compared to 44.4 for the state. Kankakee females had a rate of 40.8 while Illinois females had a rate of 42.7.

Data Source CDC Wonder – Latest mortality data available through CDC Wonder is for 2007

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

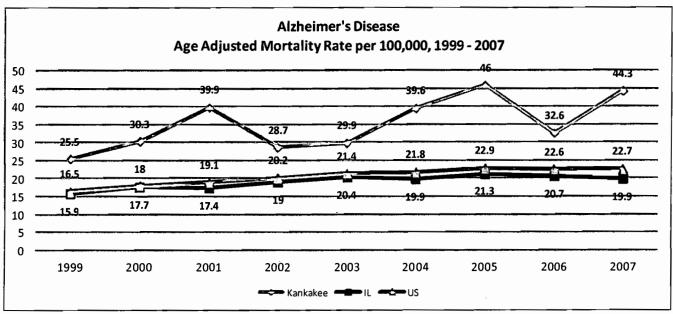

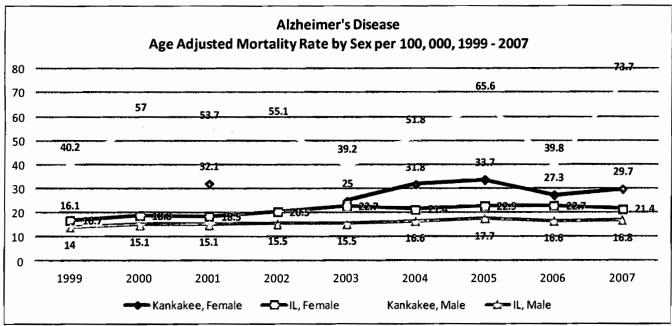

ALZHEIMER'S DISEASE OVERALL AND BY SEX

The data for the age-adjusted mortality rate due to Alzheimer's disease for Kankakee County, Illinois and the U.S. are presented below for the total population and by sex. The Kankakee County rate was considerably higher than the Illinois and U.S. rates over this period. In 2007, Kankakee had a rate of 44.3 compared to 19.9 for Illinois and 22.7 for the US. The rate for males in Kankakee County was well above the state rate from 1999 to 2007. Kankakee males had a rate of 73.7 in 2007, compared to 16.8 for the state while Kankakee females had a rate of 29.7 compared to 21.4 for the state.

Data Source CDC Wonder – Latest mortality data available through CDC Wonder is for 2007

Data Source URL http://wonder.cdc.gov/cmf-icd10.html

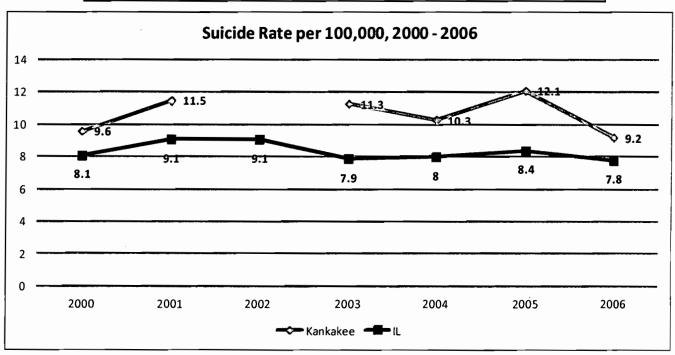

SUICIDE

The suicide rate in Kankakee County was higher than the rate for Illinois from 2000 to 2006. In 2006, the Kankakee rate was 9.2 per 100,000, compared to the state rate of 7.8 per 100,000.

CHAPTER 9

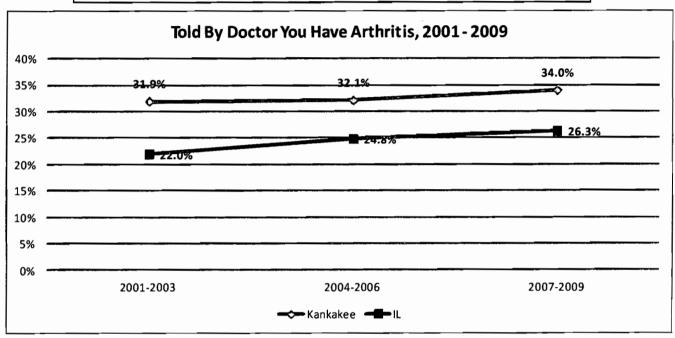

HEALTH STATUS

ARTHRITIS

The percentage of Kankakee residents who reported that they had been told by a doctor that they have arthritis was higher than the percentage for Illinois from 2001 to 2009. The Kankakee percentage in the last round of data collection was 34.0 with the Illinois percentage at 26.3.

Data Source IL Behavioral Risk Factor Surveillance System (BRFSS)

Data Source URL http://app.idph.state.il.us/brfss/countydata.asp

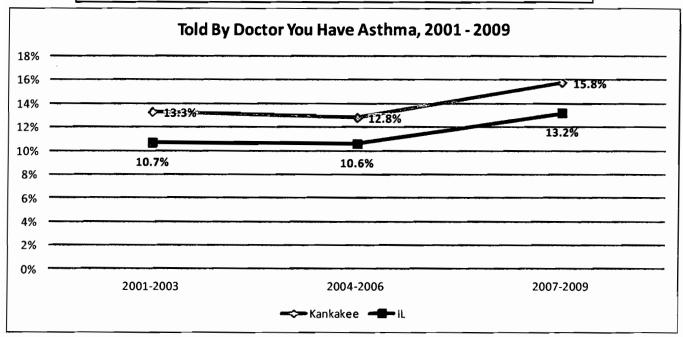

ASTHMA

The percentage of Kankakee residents who reported that they had been told by a doctor that they have asthma has been higher than the percentage for Illinois from 2001 to 2009. The Kankakee percentage in the last round of data collection was 15.8 with the Illinois percentage at 13.2.

Data Source IL Behavioral Risk Factor Surveillance System (BRFSS)

Data Source URL http://app.idph.state.il.us/brfss/countydata.asp

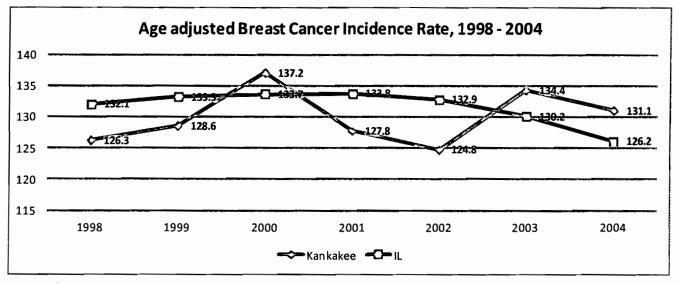

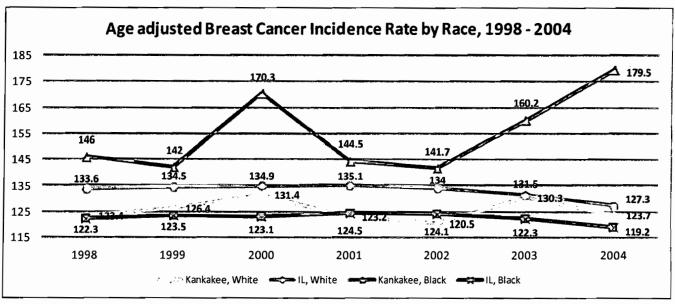

BREAST CANCER INCIDENCE

OVERALL AND BY RACE

The breast cancer incidence rate for Kankakee was both high and lower than the state rate between 1998 and 2004. The Kankakee rate in 2004 was 131.2 compared to the state at 126.2. The rate for Kankakee blacks was considerably higher than those for any other category. In 2004, Kankakee blacks had a rate of 179.5 compared to 123.7 for Kankakee whites, 119.2 for Illinois blacks and 127.3 for Illinois whites.

Data Source URL http://app.idph.state.il.us/iplandatasystem.asp?menu=1

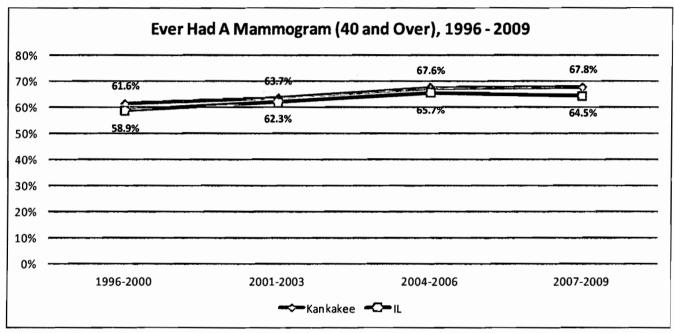

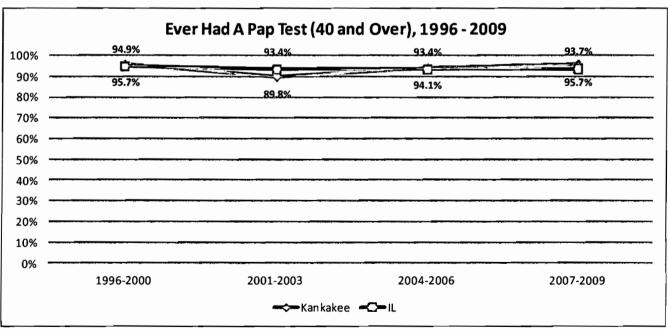

BREAST AND CERVICAL CANCER SCREENING USE

The rates for Kankakee women who have ever had a mammogram or a pap test were very similar over the four waves of the Behavioral Risk Factor Surveillance System (BRFSS) data collection period. In the last wave of data the Kankakee rate for mammograms was 67.8%, compared to 64.5% for the state. The Kankakee percentage for ever having a Pap test was 95.7 compared to 93.7 for

 Data Source
 IL Behavioral Risk Factor Surveillance System (BRFSS)

 Data Source URL
 http://app.idph.state.il.us/brfss/countydata.asp

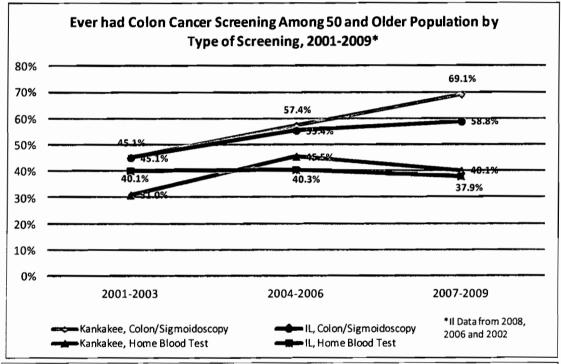

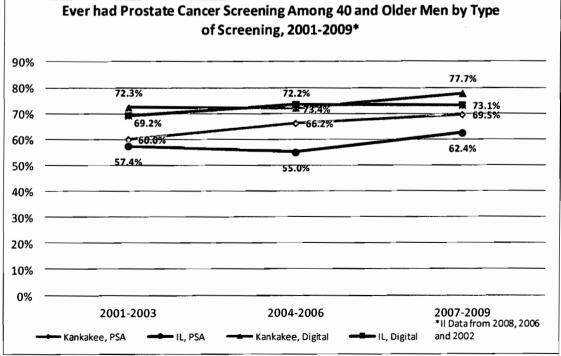

COLON AND PROSTATE CANCER SCREENING USE

The rate for ever having a colonoscopy was 45.1% for both Kankakee and the state in the most recent wave of data. The Kankakee rate for having had a home blood test was 31.0%, compared to 40.1% for the state. The rate for PSA for Kankakee males was 60.0%, compared to 57.4% for the state. The rate for digital rectal exams for Kankakee was 72.3%, compared to 69.2% for the state.

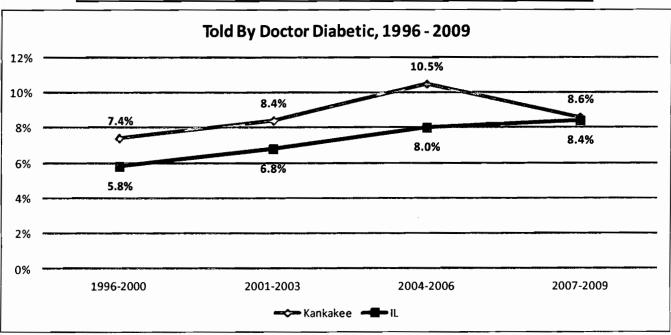

DIABETES

The percentage of individuals reporting that their doctor had told them they were diabetic has been higher in Kankakee than the state in each wave of the Behavioral Risk Factor Surveillance System (BRFSS). From 2007 - 2009, the Kankakee rate was 8.6% compared to the state rate of 8.4% this is the closest the two rates have been since 1996 - 2000 (at 7.4% and 5.8%, respectively).

 Data Source
 IL Behavioral Risk Factor Surveillance System (BRFSS)

 Data Source URL
 http://app.idph.state.il.us/brfss/countydata.asp

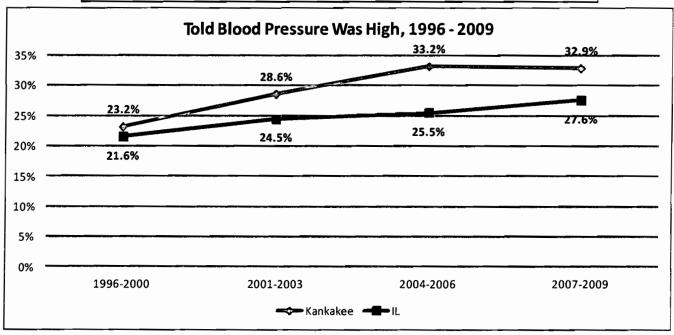

HYPERTENSION

The percentage of individuals reporting that their doctor had told them they had high blood pressure has been higher in Kankakee than the state in each wave of the Behavioral Risk Factor Surveillance System (BRFSS). In the most recent wave, 2007 - 2009, the Kankakee rate was 32.9%, compared to the state rate of 27.6%.

Data Source IL Behavioral Risk Factor Surveillance System (BRFSS)

Data Source URL http://app.idph.state.il.us/brfss/countydata.asp

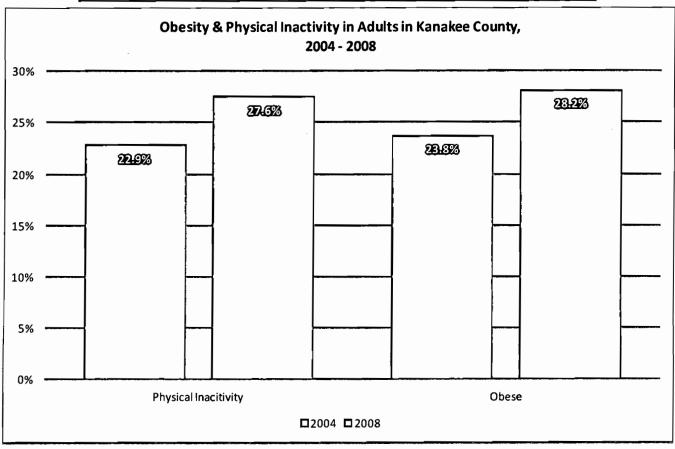

OBESITY AND PHYSICAL INACTIVITY

The percentage of Kankakee County adults who reported being obese or physically inactive increased from the years 2004 to 2008. In 2004, 22.9% reported being physically inactive. In 2008, that percentage increased to 27.6%. In 2004, 23.8% of adults were obese, with that percentage increasing to 28.2% in 2008.

CASES AND RATES

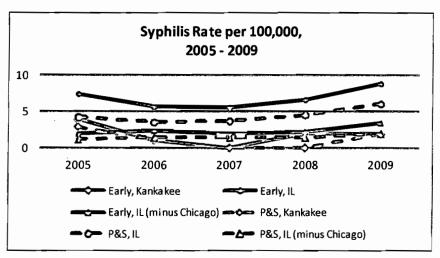

The number of cases of chlamydia has increased from a low of 409 in 2006 to a high of 566 in 2010, with the county rate being slightly higher than the state rate in most years. Gonorrhea cases and rates fluctuated from a high of 281 cases in 2007 to a low of 109 in 2006. During most of this time the Kankakee rate was slightly above the state rate. Syphilis cases and rates have been relatively low, with county rates lower than state rates for the most part and a high of five cases in 2006.

HOSPITALIZATION

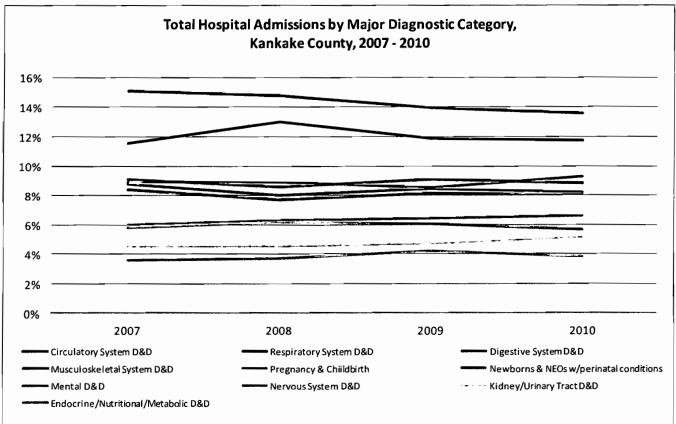

Blacks are slightly over-represented, making up 15% of the total population but 20% of hospital admissions. From 2007 to 2010, admissions with commercial insurance have decreased five percentage points, while self-pay and Medicaid admissions have each increased by two percentage points. The most common diagnosis related to admissions are diseases and disorders of the circulatory system, followed by the respiratory system. Both of these have been decreasing since 2008.

Data Source COMPdata - Kankakee County

Data Source URL Unavailable - Private Dataset

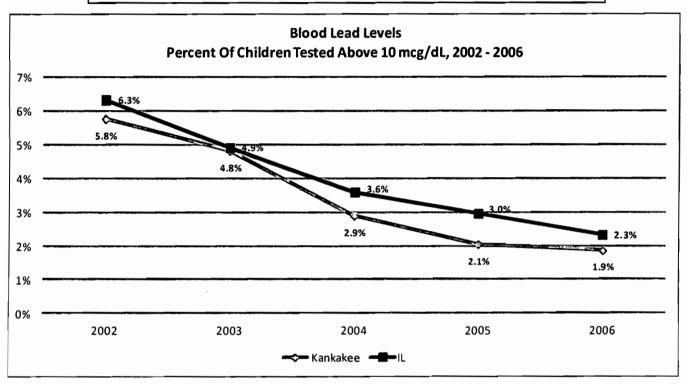

CHILDHOOD BLOOD LEAD LEVELS

The percentage of children with blood lead levels above 10mcg/dL was very similar to, though a little below, the Illinois percentage during the period 2002 to 2006. The 2006 Kankakee percentage was 1.9%, compared to 2.3% for the state.

Data Source Kids Count Data Center

Data Source URL http://datacenter.kidscount.org/data/bystate/stateprofile.aspx?state=IL&loc=2235

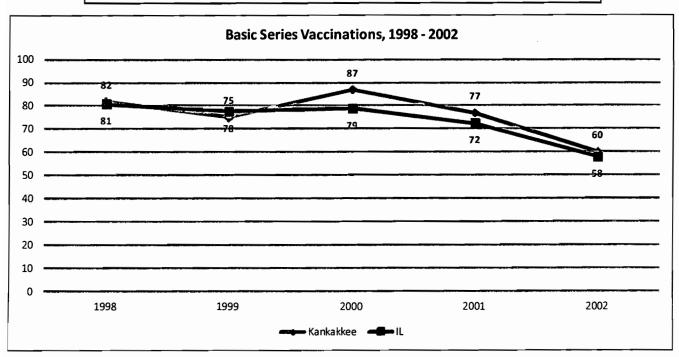

CHILDHOOD IMMUNIZATION

The percentage of children receiving the Basic Series Vaccinations from 1998 to 2002 was similar to the Illinois percentage, though slightly better than the state from 2000 to 2002. The Kankakee percentage in 2002 was 60%, compared to 58% for the state.

Data Source IPLAN Data System

Data Source URL http://app.idph.state.il.us/IPLANDataSystem.asp?menu=1

DISABILITY STATUS

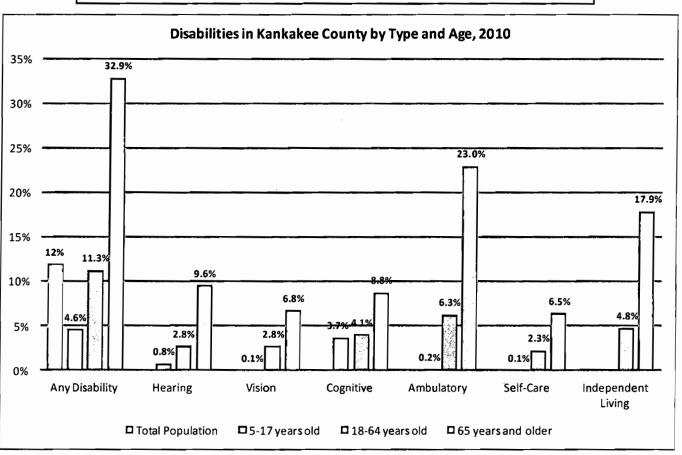

The percentage of Kankakee County residents with any disability was 12% in 2010. Persons in the oldest age category (65 and over) had the highest percentage of disabilities, with 23% reporting an ambulatory disability and 17.9% reporting an independent living disability.

CHAPTER 10

MENTAL HEALTH AND SUBSTANCE ABUSE

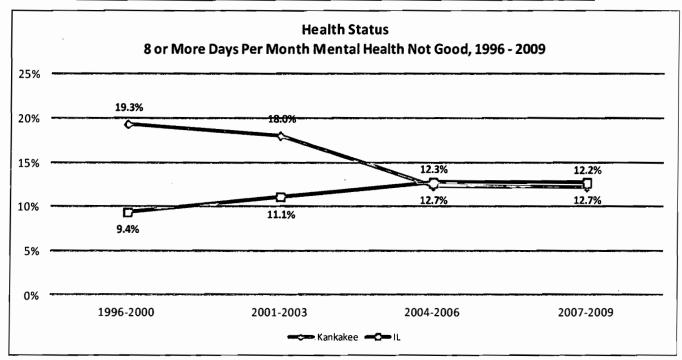

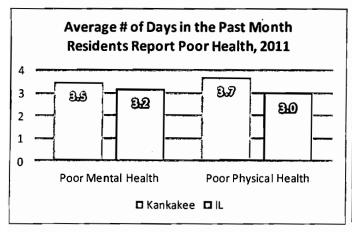

MENTAL HEALTH NOT GOOD

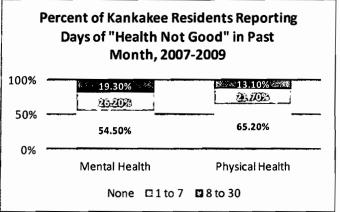

The Behavioral Risk Factor Surveillance System (BRFSS) includes an item in which the respondent answers the question "Now thinking about your mental health, which includes stress, depression, and problems with emotions, for how many days during the past 30 days was your mental health not Good?" The figure below provides the data for the percentage of individuals who responded eight or more days Kankakee County and Illinois. The percentage of individuals in Kankakee reporting eight or more days mental health not good was much higher than the Illinois percentage in the period 1998 through 2003, but was very similar to the Illinois percentage in the period 2004 to 2009. In the latest wave of data, the Kankakee rate was 12.2%, compared to 12.7% for the state.

 Data Source
 IL Behavioral Risk Factor Surveillance System (BRFSS)

 Data Source URL
 http://app.idph.state.il.us/brfss/default.asp

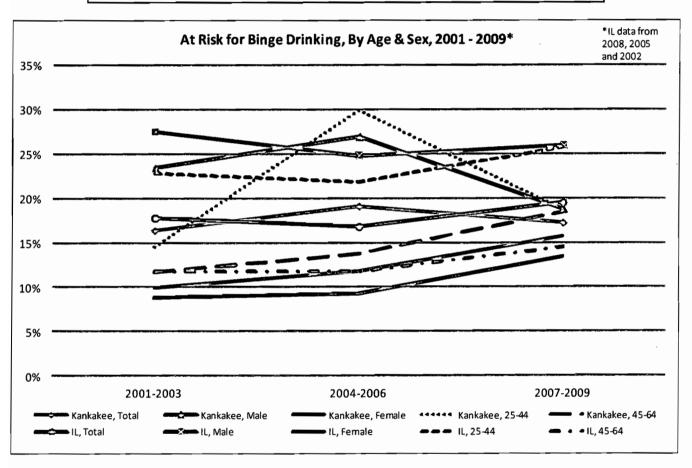

BINGE DRINKING

The percentage of individuals at risk for binge drinking in Kankakee County was very similar to the percentage for Illinois in recent years and was slightly lower than the state percentage in the latest wave of data, with Kankakee at 17.2% and the state at 19.5%.

The figures below provide data on individuals at risk for binge drinking by sex and by age. Males are consistently more likely to be at risk, although the difference narrowed in 2008, with males at 18.8% and females at 15.7%.

Data Source IL Behavioral Risk Factor Surveillance System (BRFSS)

Data Source URL http://app.idph.state.il.us/brfss/default.asp

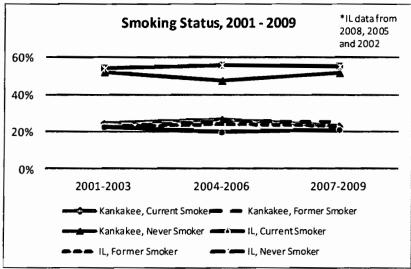

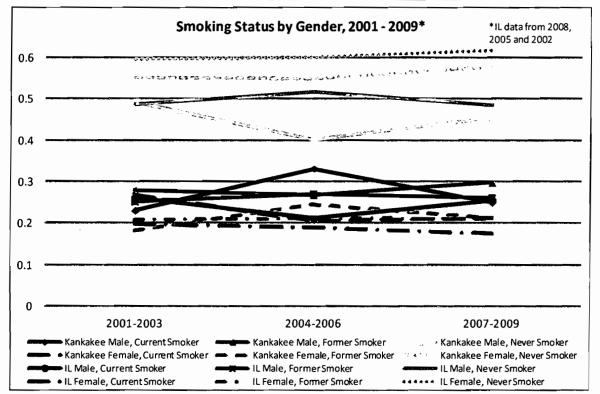

SMOKING STATUS

The percentage of Kankakee County residents who were current smokers fell from 1998 to 2008, but was slightly above the state rate for each year. In the latest wave of data current Kankakee smoking rate was 23.4%, compared to 21.3% for the state.

Smoking status is presented below for the overall population and by sex. Males are consistently more likely to be smokers in Kankakee County, although that trend was reversed in 2001 and the difference between sexes in 2008 was slight.

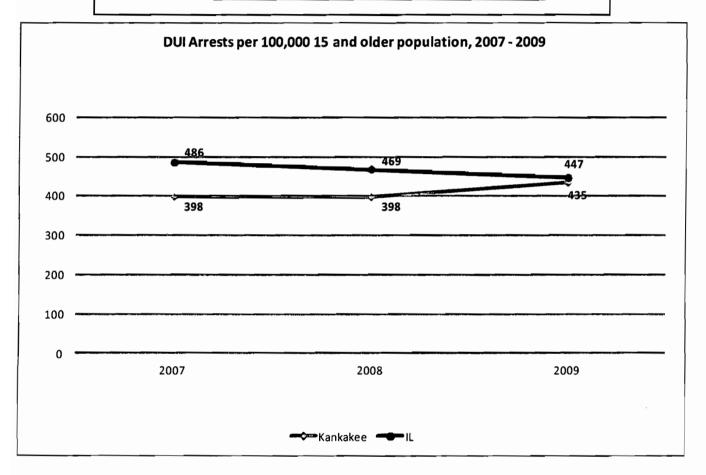

DRIVING UNDER THE INFLUENCE

The rate of DUI arrests in Kankakee County was below the Illinois rate from 2007 to 2009. The Kankakee rate in 2009 was 435 per 100,000, compared to 447 for the state.

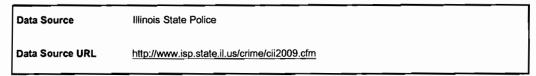

Data Source IL Secretary of State

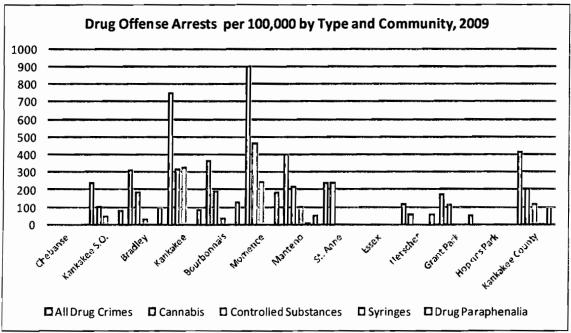

Data Source URL http://www.cyberdriveillinois.com/publications/pdf_publications/dsd_a118.pdf

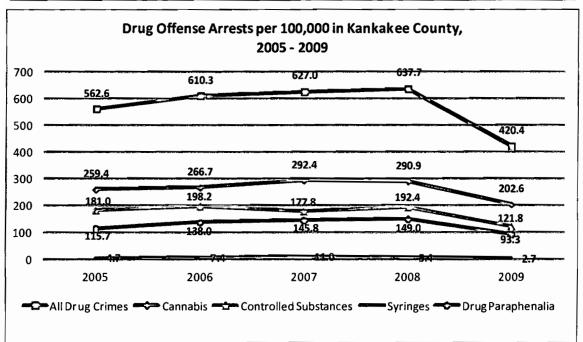

DRUG ARRESTS

The rate of drug arrests in Kankakee County was highest in Momence, Kankakee and Manteno in 2009. The rate of arrests for all types of drugs was 420.4 per 100,000 for the county, which represented a considerable drop from rates that ranged from 562.6 to 637.7 from 2005 to 2008. Cannabis was the drug with the single highest rate of arrests every year, with a rate of 202.6 in 2009.

CHAPTER 11

HEALTH RESOURCES

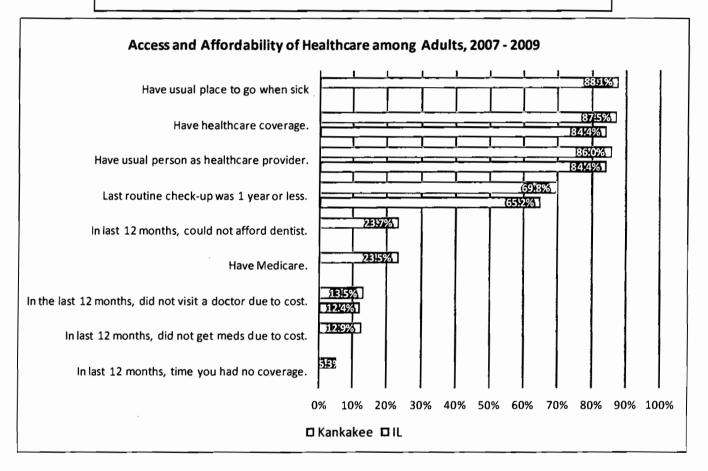

HEALTHCARE - ACCESS AND AFFORDABILITY

For most of the healthcare access variables asked in the Behavioral Risk Factor Surveillance System (BRFSS), Kankakee County compares favorably with the state. Kankakee residents report having had a check up in the last year, healthcare coverage, and a usual healthcare provider, slightly more than in the state. Kankakee County residents were somewhat more likely to have not visited a doctor in the last year due to cost.

Data Source IL Behavioral Risk Factor Surveillance System (BRFSS)

Data Source URL http://app.idph.state.il.us/brfss/countydata.asp?areaCounty=Kankakee

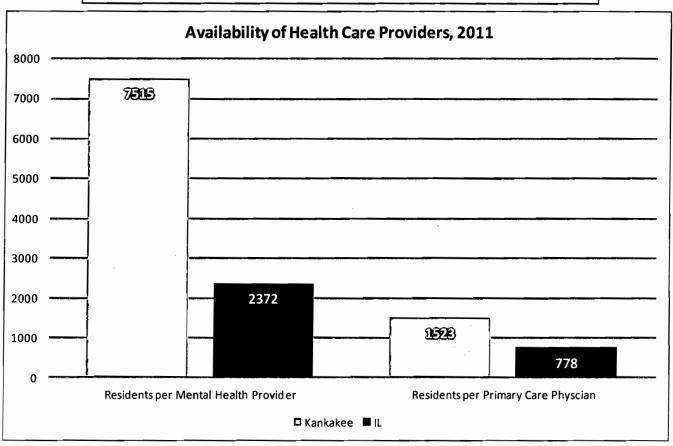

AVAILABILITY OF HEALTH CARE PROVIDERS

Kankakee has fewer physicians per resident than the state (1523 residents per physician compared to 778 per physician for the state). The disparity between the county and the state is far greater when considering the number of mental health providers per resident (7515 residents per provider compared to 2372 per provider for the state).

Data Source URL County Health Rankings - Robert Wood Johnson Foundation

http://www.countyhealthrankings.org/illinois/kankakee/other-measures

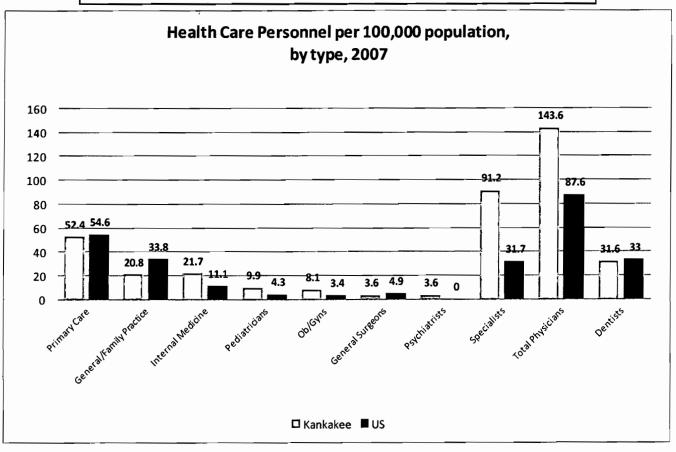

HEALTH PERSONNEL

The Health Resources and Services Administration's (HRSA) Area Resource File provides information on health personnel that allows for comparison to the national data and a selection of peer counties. Kankakee County has near the same number of primary care physicians and dentists per 100,000 population as the national median. Kankakee Count has a greater supply of internists, pediatricians and obstetricians/gynecologists than the national median. For total physicians and specialists in total, the Kankakee rate is considerably above the national median.

Data Source Health Resources and Services Administration Area Resource File

Data Source URL http://www.arf.hrsa.gov/arfwebtool/Counties_list.asp

UNINSURED ADULTS AND CHILDREN

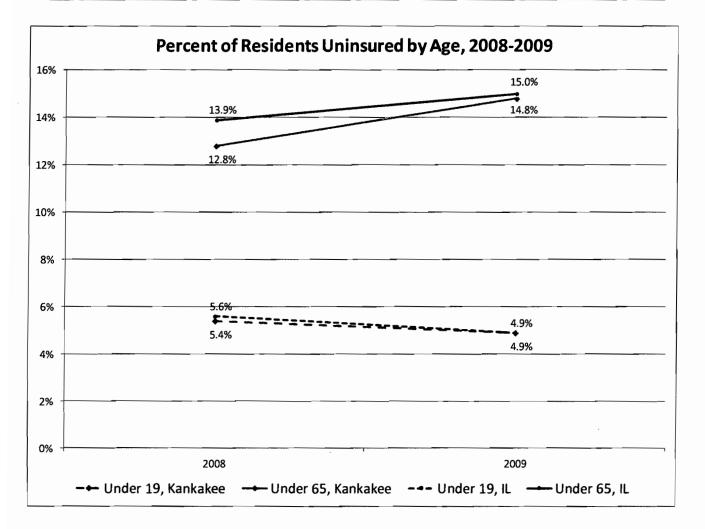

For the Over 65 population, the rate of uninsurance in Kankakee County increased from 2008 to 2009. In 2009, the percentage for both the county and the state was 15%. The percentage of uninsured residents Under 19 in Kankakee followed the same downward trend seen in the state. In 2009, those percentages were precisely the same (5%).

Data Source

US Census Bureau, Small Area Health Insurance Estimates (SAHIE)

http://smpbff1.dsd.census.gov/TheDataWeb HotReport/servlet/HotReportEngineServlet?

reportid=e7fbce89c7c49ff4357f1eb577139dc9&emailname=saeb@census.gov&filename=sahie09_county.hrml

Note 1: The Census' Small Area Health Insurance Estimates (SAHIE) methodology changed in 2008. The Census Bureau recommends against comparing 2008 or 2009 data with previous years.

NOTE 2: Certain subpopulations such as undocumented immigrants tend to be undercounted in these uninsurance estimates.

CHAPTER 12

CRIME AND VIOLENCE

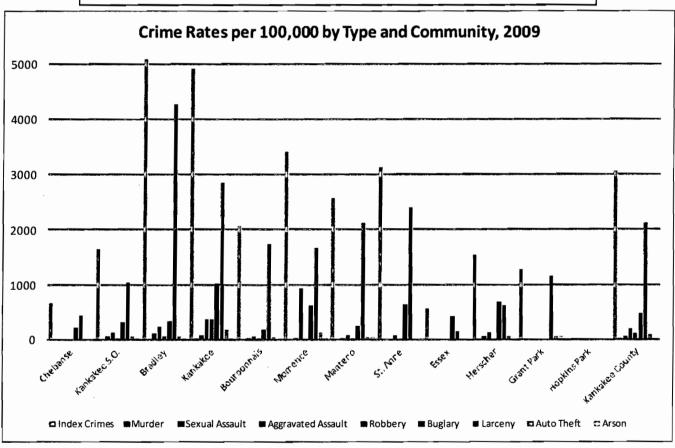

CRIME RATES BY TYPE AND COMMUNITY

The Crime Index has two categories: 1) Violent Crimes Against Persons, including: Murder and Non-negligent (i.e., willful) Manslaughter, Forcible Rape, Robbery, and Aggravated; and 2) Assault Crimes Against Property, including: Burglary, Theft, Motor Vehicle Theft and Arson. The crime rate indicates the prevalence of crime occurring across a given population. It is generally defined as the total number of index crimes per 100,000 inhabitants and is calculated as follows: Crime Index Count \times 100,000.

The overall Index Crime rate per 100,000 people in the county was 3073 in 2009. Four Kankakee communities had Index Crime rates above 3000 per 100,000 population: Bradley at 5092; Kankakee at 4923; Momence at 3419; and St. Anne at 3127.

Data Source Illinois State Police

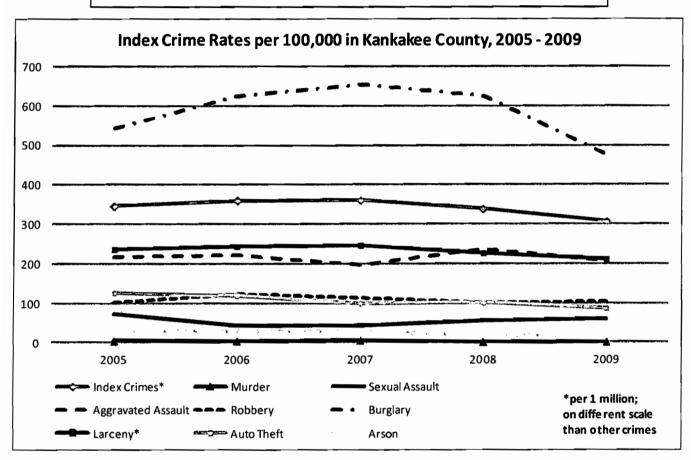

Data Source URL http://www.isp.state.il.us/crime/cii2009.cfm

KANKAKEE COUNTY INDEX CRIME

The Index crime rose from 2005 to a high of 654.5 in 2007 and then fell to a low of 473.7 in 2009. Most other rate for single crimes showed a relatively flat trend, with some decreasing slightly as would be expected give the down-trending Index Crime rate.

Data Source URL http://www.isp.state.il.us/crime/cii2009.cfm

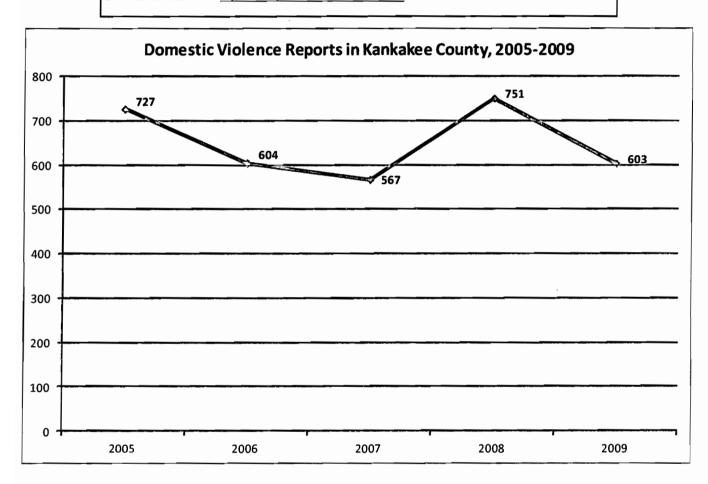

DOMESTIC VIOLENCE

Reports of domestic violence were at 603 in 2009, after fluctuating between a low of 567 to a high of 751 in the period 2005 to 2009.

Data Source Illinois State Police

Data Source URL http://www.isp.state.il.us/crime/cii2009.cfm

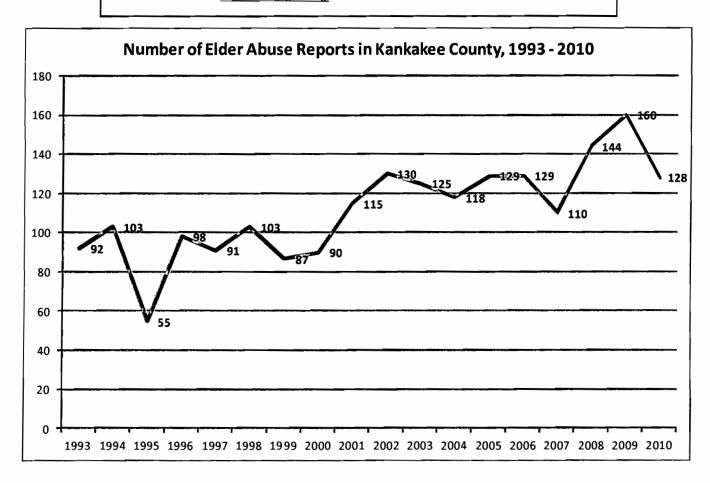

ELDER ABUSE

Reports of elder abuse in Kankakee County has increased steadily from a low of 55 in 1995 to a high of 160 in 2009. In 2010, there was a relatively sharp drop-off from that high of 160 to 128.

Data Source Northeastern Illinois Area Agency on Aging

Data Source URL http://www.ageguide.org/

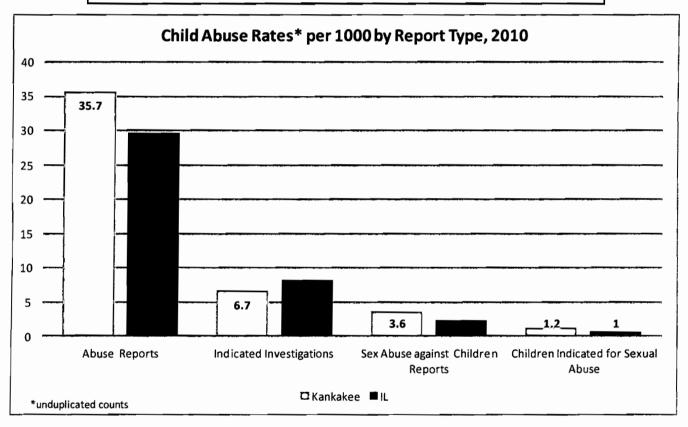

CHILD ABUSE

The overall rate of child abuse reports for Kankakee County was 35.7 per 1000 compared to 29.6 for the state. The rates for Indicated Investigations in Kankakee was lower than the state (6.7 and 8.0, respectively). The rate of reports of sex abuse against children was 3.6 in Kankakee, compared to the state at 2.0. Rates for indicated sexual abuse were 1.2 for Kankakee and 1.0 for Illinois.

Indicated investigations are those that reveal credible evidence of abuse.

Death, Illness and Injury	38
Infectious Disease	

Introduction

The Community Health Status Assessment (CHSA) in Will County was conducted as one of the four assessments in the Mobilizing Action through Planning and Partnerships (MAPP) process. The Community Health Status Assessment is a crucial component of the MAPP process in that the data gathered serves as the foundation for analyzing and identifying community health issues and determining where the community stands in relation to state and national data. During this assessment, information regarding health status, quality of life, and risk factors in the community is gathered and analyzed.

The Community Health Status Assessment provides a list of core indicators (data elements) for 11 broad-based categories:

Who are we and what do we bring to the table?

- 1. Demographic Characteristics
- 2. Socioeconomic Characteristics
- 3. Health Resource Availability

What are the strengths and risks in our community that contribute to health?

- 4. Quality of Life
- 5. Behavioral Risk Factors
- 6. Environmental Health Indicators

What is our health status?

- 7. Social and Mental Health
- 8. Maternal and Child Health
- 9. Death, Illness and Injury
- 10. Infectious Disease
- 11. Sentinel events

Methodology

For Will County's Community Health Status Assessment process, the MAPP Steering Committee identified staff from their respective organizations that were knowledgeable about data and could collect and analyze that data for the core indicators listed above. In the CHSA subcommittee's initial meetings, the group discussed which national, state and local databases could be used to gather pertinent information on the health status of Will County.

Data from *Illinois Project for Local Assessment of Need* (IPLAN), and the *Community Health Indicator Status Report* (CHIS) were reviewed and discussed. Many of the indicators for MAPP are found in the IPLAN data sets. This data was used when available, as well as data from the local hospitals. Statistical Indicators from the 2004 needs assessment were also reviewed in order to look at the data for comparison.

Assignments were divided amongst the committee members based on knowledge and accessibility to data. Committee members were asked to gather the necessary data and provide a summary of that data. Interns from Provena Saint Joseph Medical Center and Will County Health Department provided assistance with data collection.

Once all the information was received the CHSA, committee reviewed the data. The collected data was given to the Will County Health Department's epidemiologist to consolidate all of the collected data into a cohesive report to be shared with the Steering Committee. Certain sentinel events data have been combined with the infectious disease category. Cancer related data has been included with the death, illness and injury category.

Healthy People 2010

Healthy People 2010 is a comprehensive set of disease prevention and health promotion objectives for the nation to achieve over the first decade of the new century. Created by scientists both inside and outside of government, it identifies a wide range of public health priorities and specific, measurable objectives. It was developed based on initiatives pursued over the last two decades, including the 1979 Surgeon General's Report, Healthy People, and Healthy People 2000 which established national health objectives and served as the base for the development of state and community plans. For the purposes of this report, Healthy People 2010 is also referred to as HP 2010.

It is important to use *Healthy People 2010* as a benchmark for some areas in this community. Where available some of the data provided has been compared to these national benchmarks as well as state and peer county data.

Category One – Demographic Characteristics

Definition of Category: Demographic characteristics include measures of total population as well as percent of total population by age group, gender, race and ethnicity, where these populations and subpopulations are located, and the rate of change in population density over time, due to births, deaths and migration patterns.

Population Estimates & Growth

According to the U.S. Census Bureau, the Will County community has grown rapidly over the past decade and will continue to grow over the next five years. The total population for Will County is projected to be 812,444 by 2014 (an increase of 15.3% over the next five years, compared to 2.4% growth over the same time period for the State of Illinois). Current 2009 population estimate for Will County I s 704,463. The change in population growth between 2000 and 2009 is shown in Figure 1.

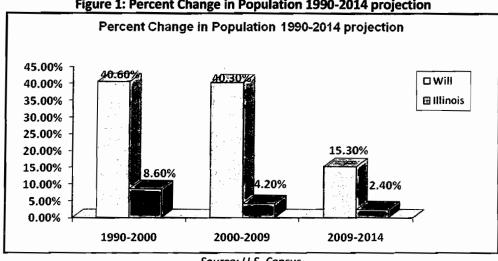

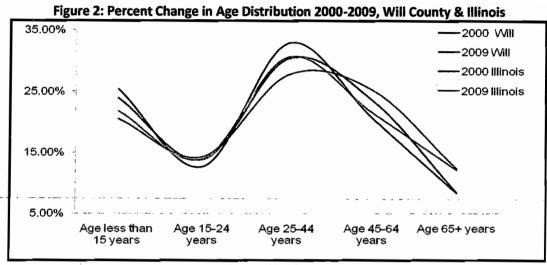

Figure 1: Percent Change in Population 1990-2014 projection

Source: U.S. Census

Age & Sex Distribution of Population

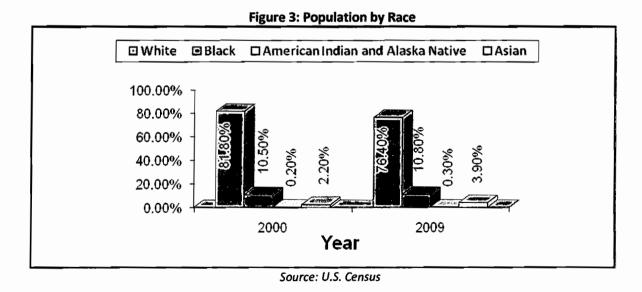

Figure 2 shows the age and sex distributions for the County. Will County represent a younger population than is found Statewide. According to 2009 estimates, 25.6 percent of Will County's population is younger than 16 compared to 21.6 percent statewide. The 2009 median age for Will County is 33.1 compared to 36.1 statewide. In 2009, 8.4 percent of the Will County population is 65 years of age or older compared to 12.3 percent Statewide.

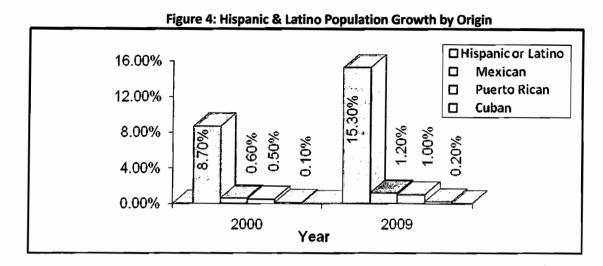

Source: U.S. Census

Racial & Ethnic Composition of Population

The racial and ethnic composition of Will County is shown in Figure 3. In 2009, the majority of Will County's population was White (76.4%), followed by Black or African American (10.8%) and Other Race (6.3%). The Hispanic and Latino population grew at a rapid rate and doubled (15.3%) in 2009 compared to 2000 (8.7%), as shown in Figure 4. Statewide, the Hispanic & Latino population grew from 12.3% in 2000 to 15.3% in 2009.

Population Age 5+ by Language Spoken at Home

Even though the Hispanic and Latino population doubled in the last decade, no significant change is noticed in language spoken at home (English vs. non-English) during the same time period as shown in the table below.

Table 1 - Will County Population Age 5 + Language Spoken at Home

	WillGounty			(Illinois

Category Two - Socioeconomic Characteristics

<u>Definition of Category -</u> Socioeconomic characteristics include measures that have been shown to affect health status, such as income, education, and employment, and the proportion of the population represented by various levels of these variables.

Median Household Income

Per capita income for Will County's population averaged \$29,144 in 2009 — an increase of more than \$4,500 from 2000 levels. Per capita income in 2009 for Will County was roughly \$2,000 more than was found statewide. The median household income among Will County residents grew by 17 percent in 2009 from 2000 compared to 19 percent Statewide for the same time period. These trends in median household income are shown in Figure 5.

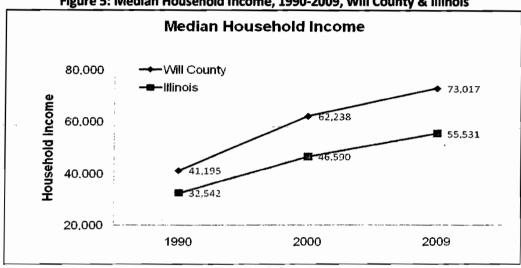

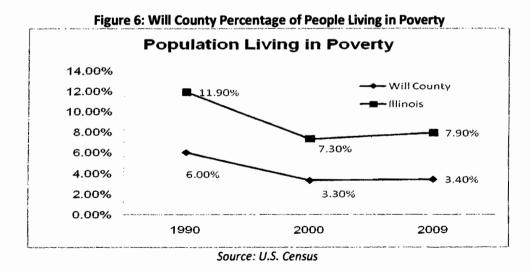

Figure 5: Median Household Income, 1990-2009, Will County & Illinois

Source: U.S. Census

Persons Living in Poverty

In 2009, 3.4 percent (6,200 families) of Will County families lived below the poverty level. While the percentage of persons living in poverty has remained relatively stable between 2000 and 2009 in Will County, the absolute numbers of families living in poverty increased by 1,721. The trend in poverty rate is shown in Figure 6.

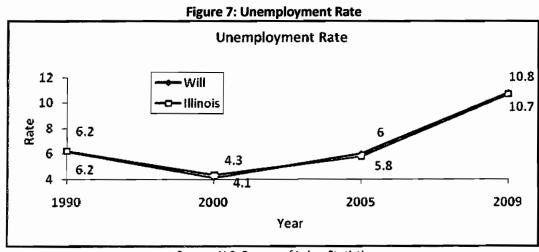

Children Living in Poverty

The percent of children living in poverty in Will County has also remained relatively stable over the last 10 years, ranging between 7 and 8 percent. According to the US Census Bureau, Will County children living in poverty in 2008 was 8 percent. This is relatively low in comparison with neighboring counties such as Cook (22%), Kankakee (18%), and Kane (13%). This is also lower than the State poverty level of 17%.

<u>Unemployment</u>

Will County has a vast labor force. However, due to the current economic status of the Nation, a great number of people are unemployed. Unemployment rates in Will County have followed both the state and national trends due to this overall economic slowdown. The 2009 Will County unemployment rate fluctuated between a low of 8.7 in January and high of 12.7 in December 2009 (average of 10.8). The Will County unemployment rate has steadily gone up since 2000 and reached the peak during in December 2009, as shown in Figure 7.

Source: U.S. Bureau of Labor Statistic

The labor force is defined as all the economically active people in a community above age 16. It includes all employed persons, the unemployed (defined as jobless, seeking a job, or available for work), and members of the armed services currently living in the area. It excludes students, unpaid caregivers (such as homemakers) and institutional populations. As seen in the table below.

Table 2 - Will County Labor Force

	(ABOR	EMPLOYED	ONEME	ROYED	UNEMPLOYMENTRATES	
YEAR	- Forces		NUMBER	Percent	ILLINOIS	US

Education

Since 2000, the percent of Will County's population without a high school degree has decreased, while the percent of population with a college, graduate, or professional degree has increased. In Will County, 12.2 percent of the population above age 25 (53,500 individuals) did not graduate high school or receive their GED. The percentage of the Will County population (age 25+) that has not graduated high school dropped from 13.1 percent to 12.2 percent between 2000 and 2009.

Immigrant Population

The Will County foreign-born population increased substantially between 2000 and 2008, by more than 50,422 residents (141 %.) Currently, the foreign-born population constitutes 15 percent of the total Will County population. In 2008, over 95 percent of the foreign-born population migrated from Asia, Europe, and Latin America. As of 2008, just under half (44.6%) of the foreign-born population had become U.S. citizens. The number of non U.S. Citizens does not take into account the number of undocumented individuals. There is currently no data tracking system available for this population.

Uninsured

The Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) released national health insurance coverage estimates based on data from the 2008 National Health Interview Survey (NHIS):

- 14.7 percent of the U.S. population was uninsured at the time of the interview, 18.7
 percent had been uninsured for at least part of the year, and 10.6 percent had been
 uninsured for more than a year.
- 8.9 percent of children were uninsured. In the 18-64 age groups, 60.2 percent of unemployed adults and 22.2 percent of employed adults were uninsured for at least part of the year.
- 18.5 percent of Illinois adults aged 18-64 years were uninsured at the time of the interview.
- According to the Illinois Department of Healthcare and Family Services, the number of children enrolled in Medicaid, Children's Health Insurance Program (CHIP), and All Kids Expansion in Will County was 34,175 for 2006 and 49,067 for 2008, a 43.6 percent increase. This increase speaks to the growth of the low income, under-insured populations in Will County, especially when compared to the 20 percent change statewide.

According to the U.S. Census Bureau, Small Area Health Insurance Estimates, 12.7 percent of the Will County population under the age of 65 was uninsured in 2006. According to the 2008 Illinois Behavioral Risk Factor Surveillance survey, statewide in Illinois, 15.6 percent of people surveyed reported that they did not have a primary health care provider. Also, 14.6 percent of people surveyed reported that they did not have health care coverage. In 2008, the proportion of Will County residents without a regular source of primary care was 14.9 percent. Additionally, 7.9 percent of Will County residents reported not having health care coverage at all. (See Figure 8 below).

Percent Reported 20 16.1 14.9 14.9 15 9.8 10 8.2 7.9 5 0 2002 2005 2008 No Primary Care Provider No Health Care Coverage

Category Three - Health Resource Availability

<u>Definition of Category</u>: This domain represents factors associated with health system capacity, which may include both the number of licensed and credentialed health personnel and the physical capacity of health facilities. In addition, the category of health resources includes measures of access, utilization, cost and quality of health care and prevention services. Service delivery patterns and roles of public and private sectors as payers and/or providers may also be relevant.

<u>Medical Resources:</u> The following tables show the sources of care, hospital based services and other clinical services available in Will County.

The Community Health Status Indicators (CHSI) Report for 2008, states that there were 60,168 Medicaid beneficiaries. According to the All Kids Preliminary Report for the same year, there were approximately 500 primary and specialty care physicians accepting Medicaid patients (a rate of 8.3 per 1,000 patients). Of these physicians:

- 166 were general practitioners
- 36 were family physicians
- 44 were internal medicine,
- 30 were gynecologists or obstetricians
- 13 were pediatricians
- An additional 212 were physicians in other specialties, including surgery, oncology, emergency medicine, etc.

County Health Rankings

Released in 2010, the University of Wisconsin and Robert Wood Johnson Foundation conducted a study on the health of counties around the United States. According to the report, in overall health outcomes, Will County ranked 17 out of 101 Illinois counties. In the area of clinical care, Will County ranked 51. Indicators for this category included uninsured adults, primary care provider rate, preventable hospital stays, diabetic screenings and hospice use. The outcomes are shown in the following chart. (Note: Ranking for the County Health Rankings Report was based on data primarily for 2005 – 2006. For more information click on the following link: www.countyhealthrankings.org

Category Four - Quality of Life

<u>Definition of Category</u>: Quality of life is a difficult concept to define and quantify. While some dimensions of quality of life can be quantified using indicators research has shown to be related to determinants of health and community well-being. Other valid dimensions of quality of life include perceptions community residents have about aspects of their neighborhoods and communities that either enhance or diminish their quality of life. Additionally, standard indicators of quality of life include not only wealth and employment, but also the built environment, physical and mental health, education, recreation and leisure time, and social belonging.

<u>Industry</u>

Will County is a fast growing and diverse community. It is first in population growth of all Illinois Counties and the 10th fastest growing county in the United States. Will County is also the 14th fastest growing city of 100,000 or more in the US and 36th nationally in new job creation. Because of this, Will County is quickly becoming a center of economic development and commerce. Due to the rapid industrial growth of the county, it is home to two intermodal centers (a third is under construction) totaling 7100 acres. Will County also has approximately five motor freight terminals and twenty-five freight carriers. Industries in Will County also have access to a number of railway services, including the Chicago Rock Island & Pacific Railroad,

Elgin Joliet & Eastern Railway, Union Pacific Corporation, and Norfolk Southern Corporation among others.

Transportation

Residents of Will County have access to a number of modes of transportation. Will County has access to four major interstates; I55, I57, I80, and I355, as well as four US highways and a number of Illinois highways. Public transportation is accessible in most areas of the county. This includes PACE suburban bus transit, Metra (which serves Will, Cook, DuPage, Kane, Lake, and McHenry counties), and AMTRAK (National Railroad Passenger Corp). Several townships provide bus services to seniors and the disabled populations they service. Additionally, there is access to both Chicago O'Hare International Airport and Chicago Midway International Airport (both within 30 miles of Will County borders) as well as several airports used for general aviation.

New Construction

According to the Will County Center for Economic Development, Will County is first in new home construction in Illinois. 1,162 new residential building permits were issued in 2008.

Entertainment and Recreation

Will County is rich with historically significant sights including homes, and historical districts in several towns. Examples include Historical Route 66 which runs between Wilmington and Joliet, Rialto Square Theatre in downtown Joliet and Historical districts in such towns as Peotone, Lockport, and Joliet. Additionally, the building of the Illinois and Michigan Canal was significant both architecturally and industrially to the history of Will County. Will County is also home to two casinos, Chicago Speedway and the Jackhammers Minor League Baseball team.

Aside from its rich cultural history, Will County is also rich with recreational activities. Specifically, the Forest Preserve District of Will County boasts miles of interlinking trails that crisscross the county and provide enjoyment to outdoor enthusiasts. The Preserve includes 34 improved preserves (featuring public access and physical improvements such as picnic pavilions and more), 11 trails, three dog parks, 7 visitor centers, and 31 unimproved preserves (which do not have public access or developments but serve to protect natural resources).

Child Care Assistance

An additional indicator of the quality of life in a community is the availability of childcare for low-income families. The number of openings in childcare facilities willing to accept childcare assistance has increased in the past five years in relation to the population growth in the area. As seen in the chart below, in 2005, there were 12,210 slots available for children in low-income families and in 2009, this number had increased to 15,397. A clearer way to see the availability of childcare for low-income families is to look at the percentage of slots in childcare programs that can be filled by these children. In 2005, this percentage was 78% and in 2009, decreased to 70%. According to the Illinois Department of Human Services, in March 2008 in Will County, there were 2417 families and 4449 children participating in the Illinois Child Care Assistance Program.

Table 12 - Slots in Programs Willing to Accept Child Care Assistance

Political Involvement

A community's involvement in politics reveals an interest in the state of the community and the policy and legislation that make it run smoothly. As a result, the quality of life in a community can depend on the community's voter turnout. In the November 7, 2006 general election, there were 344,584 registered voters and 160,630 ballots cast, indicating a voter turnout of 46.62 percent. In the November 4, 2008 general election, there were 373,847 registered voters and 284,661 ballots cast, indicating a 76.14 percent voter turnout. The large increase in percent of voter turnout can mostly be attributed to the Presidential Election that coincided with the local election, indicating that voters are more likely to cast a ballot if there is a national necessity rather than solely for local elections.

- 1. Will County Center for Economic Development
- 2. Illinois Network of Child Care Resource and Referral Agencies (INCCRRA)

Category Five - Behavioral Risk Factors

<u>Definition of Category</u>: Risk factors in this category include behaviors which are believed to cause, or to be contributing factors to, injuries, disease, and death during youth and adolescence and significant morbidity and mortality in later life.

Tobacco Use by Adults

In 2006, 23.2 percent of Will County adults were current smokers, and by 2008, this decreased to 19.6 percent. In addition, the number of non-smokers increased from 52.9 percent to 59.4 percent. For the state of Illinois in 2008, the figures were similar with 21.3 percent of adults reporting they were current smokers. According to the 2007 NHIS, the national amount of current adult smokers was 20 percent. The amount of adult smokers in Will County is above the *Health People 2010* target of 12 percent, indicating an area of opportunity for health professionals.

Nutrition

In 2008, 14 percent of Will County adults ate more than five servings of fruits or vegetables per day. Additionally, 54.5 percent of this population ate zero to two servings of fruit or vegetables daily. These figures are a little higher than the state, in which 25 percent of Illinois adults ate more than five servings of fruits and vegetables daily in 2007.

In the state of Illinois in 2007, 78.9 percent of high school students ate less than five servings of fruits and vegetables per day, according to the Illinois Youth Survey. For this same population, 13.3 percent did not eat fruit one or more times during the seven days prior to the survey. When comparing this to the entire United States high school population, the results are similar. For all high school students nationwide in 2007, 78.6 percent ate less than five servings of fruits and vegetables per day, and 14.7 percent did not eat a single serving of fruit in the previous week before the survey.

Physical Activity

According to the 2007 National Health Interview Survey (NHIS), 39 percent of adults were regarded as inactive when considering all leisure-time physical activity, while 31 percent reported engaging in leisure time physical activity on a regular basis. Also, according to the Behavioral Risk Factor Surveillance System (BRFSS) for that same year, 50.5 percent of nationwide adults did not participate in 30 or more minutes of moderate physical activity five or more days per week, or vigorous physical activity for 20 or more minutes three or more days per week.

According to the 2007 Illinois Behavioral Risk Factor Surveillance System, 42.7 percent of Will County adults engaged in moderate physical activity 5 or more times per week for at least 30 minutes per day, while 36.2 percent engaged in vigorous activity 3 or more times per week for at least 20 minutes per day. While this exceeds the *Healthy People 2010* target, 47.9 percent of Will County adults feel that they do not get enough exercise.

Overweight and Obesity

Overweight and obesity is a growing public health concern that can affect all individuals, regardless of age, gender, or ethnicity. Presently, no state has met the *Healthy People 2010* objective of reducing the prevalence of obesity among adults to 15 percent; in contrast, rates are increasing. Nationwide in 2007, 26.3 percent of adults were considered obese, as defined by a Body Mass Index (BMI) of 30 or more. This is nearly a two percent increase from 2005 in which 24.4 percent of U.S. adults were obese. Similarly, in 2001, the percent of obese adults in Illinois was 21, by 2007, that figure reached 25.6 percent.

Congruent with national trends, adult obesity in Will County continues to increase. According to the Illinois Behavioral Risk Factor Surveillance System Survey, in 2008, 18.7 percent of Will County adults were obese or morbidly obese. In addition, another 38.6 percent of Will County adults were overweight, defined as a BMI between 25 and 29.9. Though the rates for Will County are below both the state and national rates, they are still above the *Healthy People* 2010 target.

Mammography

Mammography is the single most effective method for early detection of breast cancer, which is vital in order to enhance treatment options and improve the chances of both successful treatment and survival. According to the 2008 Behavioral Risk Factor Survey, in Illinois 79.3 percent of women over 40 years old have had a mammogram within the last one year.

Approximately 68.8 percent of Will County women aged 40 years and over had a mammogram within the past one year in a 2008 survey, which is an increase from 2005 in which 60 percent of this population reported having a mammogram in the past year.

Pap Smear

Nationwide in 2008, 82.9 percent of women aged 18 years and older had a Pap test within the past three years, which falls short of the *Healthy People 2010* target of 90 percent. For the state of Illinois in 2008, 83.8 percent of women over 18 years had a Pap test within the previous three years, which is still below *HP 2010* targets, though above nationwide figures. For Will County in 2008, approximately 91 percent of adult women had ever received a Pap test (a decrease from 2005), and 79% percent of women over 18 years had a Pap test within the last year (an increase from 2005).

Table 13 -- Percent of Will County Women Who Received Pap Smears

	2005-2006 Baseline		20	03
(B)=	Will County	lilin oi s	Will County	Illinois
Women aged 18 years and older who have ever received a Pap test	97%	93.4%	91%	93.7%
Women aged 18 years and older who received a Pap test within the past year	66.4%	79.3%	79%	77.5%

Source: Behavioral Risk Factor Surveillance Survey

Seatbelt Usage

Motor vehicle crashes are the leading cause of death and disability for Americans between the ages of 4 and 34 making them a serious public health problem. The Illinois Department of Transportation (IDOT) suggests that a simple, free, cost-effective means to prevent injury and fatalities to you and your family is making sure everyone buckles up, every trip, every time.

While data specific to Will County is not available, Illinois Department of Transportation, IDOT provides statistics relating to the "Collar Counties" which include DuPage, Kane, Lake, McHenry, and Will. According to the annual IDOT Safety Belt Usage study in 2009, the Collar counties had the highest usage rate at 93.1 percent. This rate is higher than the statewide rate of 91.7 percent. This is also a continuation of the steady increase seen in safety belt usage since 2003 when the primary safety belt legislation was passed in Illinois. Moreover, a continuation of the trend that the Collar counties have a higher rate of safety belt usage than the state, as seen in the figure below.

Child Safety Seat Use

In Illinois in 2009, the child restraint usage was 90.7 percent. However, after excluding the total number of observations in which the child restraint is used incorrectly, the rate was only 47.7 percent. While statistics specific to Will County are not available, IDOT does provide data related to the use of child safety seats for the Collar Counties (including DuPage, Kane, Lake, McHenry, and Will). For these counties, the rate of child restraint usage for 2009 was 93.5 percent. However, after excluding the total number of observations in which the child restraint is used incorrectly, the usage rate is reduced to 45.6 percent. While the total usage rate for the Collar counties was better than the statewide rate, the rate of incorrect usage was higher.

Youth Behavioral Risk Factors

The Illinois Youth Survey is organized and administered by Chestnut Health Systems (a not for profit organization providing behavioral health care). The Illinois Department of Human Services provides sponsorship to participating schools. The survey is designed for use in grades 6, 8, 10, and 12. Meant to help schools develop substance abuse prevention initiatives the survey provides rates of substance abuse, and related problems such as youth violence. It also measures key risk factors, such as access to drugs, peer drug attitudes and family rules.

Local survey results assess the health risks of public school students in Will County

The percentages of youth who reported using alcohol in past 30 days shows overall increased in 2008 (61%) and 2006 (66%) compared to 2004 (49%) among 12th grade students. The percentage of 12th grader reported using tobecco in past month decreased significantly in 2008 (27%) and 2006 (33%) compared to 2004 (30%). The percentages of youth who reported using marijuana in past 30 days shows excrail increased in 2009 (20%) and 2000 (20%) compared to 2004 (18%) among 12th grade students. Overall, similar trend has been noticed among 10th, 8th and 6th grade students.

During the 2008 survey, the percentage of parents/guardians talking about not using tobacco, alcohol, marijuana and other illegal drugs was higher for younger children compared to older children. Less than 50% of parents/guardians talked to their older youth (10th and 12th graders) about not using tobacco, alcohol, marijuana and other illegal drugs.

During 2008, participation in school sports teams, other sports activities, service clubs, faith based youth groups and other activities increased from 6th grade to 12th grade, but declined in scouting, bouts and girls club and 4-H club participation. During 2008, approximately 30% of youth reported participating in some form of physical activity in last 7 days.

According to the 2008 survey, less 30% of youth reported eating fruits and vegetables at least 1 to 3 times in a week. Less than 15% of youth reported eating fruits and vegetables, 4 or more time per days in a week. Younger youth (6th and 8th grader) are more likely to consume 4 or more servings of fruits and vegetable compared to older youth (10th and 12th grader). Additionally, less than 19% youth reported drinking 1-3 glasses of milk in a day in past 7 days. Significantly higher (13%) number of youth reported not drinking milk at all in last 7 days.

Category Six - Environmental Health Indicators

<u>Definition of Category</u>: The physical environment directly impacts health and quality of life. Clean air and water, as well as safely prepared food, are essential to physical health. Exposure to environmental substances such as lead or hazardous waste increases risk for preventable disease. Unintentional home, workplace, or recreational injuries affect all age groups and may result in premature disability or mortality.

Outdoor Air Quality

The National goal is to reduce the proportion of persons exposed to air that does not meet the U.S. Environmental Protection Agency's health-based standards for harmful air pollutants.

Federal and State Ozone and Particulate Matter are used to determine an area's Air Quality Index (AQI). According to the Illinois Environmental Protection Agency, Illinois has been experiencing an on-going trend of decreased levels of Ozone and Particulate Matter. Will County area trends have been variable with Particulate Matter levels slightly exceeding the EPA's Primary Annual Standard only once between 2004 and 2008. As of 2008, Will County meets the IIP 2010 Target of having zero percent of persons exposed to air that does not meet the EPA's health based standards for ozone and fine particulate matter.

Note: For the purpose of this objective, EPA is counting persons living in nonattainment areas only. Ambient ozone is considered a pollutant because it occurs in the troposphere—the air that people breathe—and not in the stratosphere, high above the earth. Ozone is readily formed during hot summer weather from volatile organic compounds, such as from motor vehicles, nitrogen oxides from power plants and other sources. Fine particles (PM2.5) result from fuel combustion from motor vehicles, power generation, residential fireplaces and other sources.

Figure 9: Will County Particulate Matter Fine (PM2.5)

Source: Illinois Environmental Protection Agency, Annual Report 2004-2008

Air pollution continues to be a widespread public health and environmental problem in the United States, causing premature death, cancer, and long-term damage to respiratory and cardiovascular systems.

Water Quality:

Data Not Available

Toxics and Waste

Since 2002, considerable progress has been made in reducing blood lead levels (BLL) in the United States, yet lead poisoning remains a preventable environmental health problem. Although BLL in Will County children under six years of age have declined since 2002 (Figure 10), they remain above the HP2010 target of zero percent.

*Preliminary Data (Not finalized) **No longer reportable

Source: Will County Health Department, Epidemiology & Communicable Disease Program

Salmonellosis is one of the most frequently reported foodborne illnesses in the United States. In Will County, the 2008 case rate for Salmonellosis was about 12.2 cases per 100,000 populations, just slightly above the state levels, yet well above the HP 2010 target, Figure 11. The emerging pathogen E. coli STEC (Shiga Toxin Producing) causes infections that are less often reported but commonly more severe. Will County had a higher case rate than the state, with

1.9 cases per 100,000. The 2008 case rate for E. coli infection also exceeded the national target, although preliminary 2009 data suggests an increase due to outbreak associated with out of county childcare centers. Listeriosis cases remain very low in Will County in 2008 and 2009; Will County meets the HP 2010 target of 0.25 per 100,000 populations. The Will County case rate for Hepatitis A infection has fluctuated over the last few years, but remains above the state level.

Outbreaks of E. coli 0157:H7 have been associated with undercooked or raw ground beef, unpasteurized apple juice, and some types of fresh (raw) produce. The most frequent known cause of outbreaks of Salmonella Entritidis is the consumption of food that contains undercooked or raw eggs. Norovirus was the agent in more than half of the confirmed outbreaks in which an agent was identified in Will County during 2006-2007.

Source: Illinois Department of Public Health, Communicable Disease Section, Will County Health Department, Epidemiology & Communicable Disease Program, and Will County Animal Control

After a surge in 2007, 2008 and 2009 data shows decline in positivity of rabid animals found in Will County. Illinois has reported the same trend (2007=113, 2008=103, and 2009=83). Bats are the only species found positive in Will County and Illinois. The seasonal pattern affects animal (bats) behavior and their presence in the community. The Will County Health Department in Conjunction with the Will County Animal Control aggressively promotes rabies awareness during the peak season to educate parents and children about avoiding contact with wildlife.

Category Seven: Social and Mental Health

<u>Definition of Category</u>: Social and mental health refers to the factors and conditions, which directly or indirectly influence overall health status and individual and community quality of life. Mental health conditions and overall psychological well-being may be influenced by substance abuse and violence within the home and within the community. There are several specific indicators of a community's social and mental well being. These include self-reported days of poor mental health in the past 30 days, child abuse and neglect, homicide, suicide, domestic violence, psychiatric admissions, and alcohol or drug related death. While many more indicators or factors may contribute to the overall social and mental health of a community, these are the basic, commonly reported measures which allow for state and national comparisons.

Mental Disorder

According to Healthy People 2010, approximately 20 percent of the U.S. population is affected by mental illness in a given year. According to the Illinois Department of Public Health EMS data reporting system, in 2000, in Will County there were 3,206 hospitalizations due to mental health disorders. This number steadily increased to 5,090 in 2008. On average, mental health disorders have contributed to 6.3 percent of hospitalizations between 2000 and 2008.

Table 17 - Hospitalizations for Mental Health Disorders in Will County

State Operated Facility (SOF) Admissions and Screenings

Recommendations by the Will/Grundy Local Area Network, (LAN) 6D, for hospital admissions to state operated facilities have continued to increase over the years. The most common primary diagnosis was major depression, followed by bipolar disorder. The most common secondary diagnosis was substance related. See tables 18 and 19. Note that these numbers include both Will County and Grundy County residents that were screened.

Reported Mental Health

According to the Behavioral Risk Factor Surveillance System Data, individuals reporting having 8-30 days of poor mental health (in the past 30 days) has steadily increased from 10.4 percent in 2002 to 17.3 percent in 2008. Because of this change the percentage of people reporting 1-7 days of poor mental health (in the past 30 days) has steadily decreased from 26.8 percent in 2002 to 17.3 percent in 2008. Congruently, the state of Illinois has a much greater percentage of people who report only 1-7 days of poor mental health (25.4 percent) and a much lower percentage of people reporting 8-30 days of poor mental health (12.7 percent).

Suicide

Suicide is recognized as a chronic epidemic. About 30,000 people reportedly kill themselves each year in the United States. The true number of suicides is likely higher because some deaths that were thought to be an accident, like a single-car accident, overdose, or shooting, are not recognized as being a suicide.

In Illinois, more than 1,000 deaths are attributed to suicide each year. Suicide fluctuates between the second and third leading cause of death for adolescents in Illinois. A greater number of suicide deaths occur than deaths by homicide, HIV disease, or impaired driving. Specifically between 1999 and 2002, 5.5 percent more Illinoisans died from suicide than homicide. In addition to the pain of loss by suicide, in Illinois, the annual estimated cost of suicide and medically treated youth suicide attempts is \$539 million.

On average in Will County, for the years 2000-2006, suicide accounted for 1.5 percent of all deaths. In Will County in 2006, there were 51 deaths attributed to suicide. Since 2000, this number has varied very little, fluctuating from a low of 42 in 2000 to a high of 55 in 2005. Child Abuse and Neglect

According to the Illinois Department of Children and Family Services, hotline social workers in Illinois will handle approximately 125,000 reports of child abuse and neglect in 2010. For the state of Illinois, approximately 25.7 percent of all reports are "indicated" meaning that they have been confirmed after investigations are completed. Of the 110,239 child reports taken in Fiscal Year 2006, 26,618 were indicated as victims of abuse or neglect.

In Will County, the number of child abuse and neglect reports has increased steadily since 2006 where it was 3,522. As of 2009, that number had increased to 4,146. More troubling for Will County is the number of indicated abuse and neglect investigations. From 2006 to 2009 in Will County, an average of 20.3 percent of reported child abuse or neglect cases were indicated. In 2006, the rate of indicated abuse and neglect investigations was 3.9 per 1,000. By 2009, that number had almost doubled to 6.1 per 1,000. While Will County is below the state rate for indicated child abuse and neglect, the steady increase still indicates an area of concern.

Figure 13: Illinois and Will County Rate of Reported Child Abuse and Neglect (Rate per 1,000) 35 29.8 30.1 30.2 30.1 30 25 24.9 23.1 21.4 20 15 10 5 0 2006 2009 2007 2008 → Will County

Source: Illinois Department of Children and Family Services

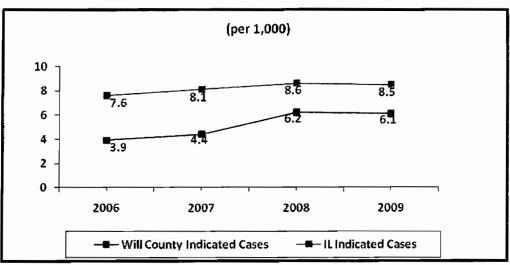

Figure 14: Illinois and Will County Rate of Indicated Abuse and Neglect Investigations

Source: Illinois Department of Children and Family Services- Child Abuse and Neglect Report

The number of children reported as sexually abused has remained consistent from 2006-2009; between 300 and 315 reports were made. The rate of children reported as sexually abused has remained around 2.0 per 1,000 for the same period. The number of children indicated for sexual abuse has fluctuated from 59 in 2006 to 68 in 2007, then jumped to 91 in 2008 and dropped to 70 in 2009. From 2006 to 2009, the average percentage of reported sexual abuse cases that were indicated was 23.3 percent. The rate of children indicated for sexual abuse has also remained consistent between 2006 and 2009, around 0.5 per 1,000. Will County rates for children both reported sexual abuse and indicated sexual abuse are also below the state rates of 2.5 and 0.7 respectively.

Crime Index Offenses

An estimated 1,382,012 violent crimes occurred nationwide in 2008, showing a decrease of 1.9 percent from the 2007 estimate. The 2008 estimated violent crime total was 1.6 percent above the 2004 level but 3.1 percent below the 1999 level. There were an estimated 454.5 violent crimes per 100,000 inhabitants in 2008. Aggravated assaults accounted for 60.4 percent of violent crimes, the highest number of violent crimes reported to law enforcement. Robbery comprised 32.0 percent of violent crimes, forcible rape accounted for 6.4 percent, and murder accounted for 1.2 percent of estimated violent crimes in 2008.

In Illinois, an estimated 456,359 crimes occurred; a decrease of 6.2 percent from 2004. The rate of crime in 2008 was 3,550.7 per 100,000. The 2008 murder rate was 6.1 per 100,000, an increase of 3.4 percent from 2007 but an overall decrease of 1.6 percent from 2004. Overall, in Illinois in 2008, crime went down. A decrease was also seen in the rate of criminal sexual assault and aggravated assault/ battery. The number of domestic crimes in Illinois also went down from 2004 (122,797) to 2008 (109,089); a decrease of 11.2 percent was seen. Additionally, the rate of drug arrests in 2008 in Illinois (769.6 per 100,000) was down 10.5 percent from 2007 (859.5 per 100,000).

Figure 15: Illinois and Will County Murder Rate Trends

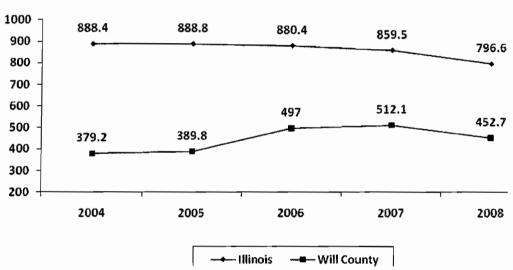

Source: Illinois State Police-Uniform Crime Report, 2008

In Will County, total number of crime fluctuated between 2004 and 2008, showing an overall decrease of 11.6 percent. Also down from 2004 are the percent of murder (down 17.2%), criminal sexual assault (down 17.2%) and aggravated assault/ battery (down 20.8%). However, despite their decrease in statewide, the number of domestic crimes increased from 2004 to 2008; a percent change of 17.4. Additionally, drug arrests has increased dramatically since 2004; 19.4 percent. This could possibly indicate an increase in violations or an increase in the effectiveness of the police force dealing with these crimes.

In 2008 in Will County, cannabis violations contributed to 53.5 percent of all drug arrests, 23.4 percent were due to controlled substance act violations, 22.4 percent were due to drug paraphernalia act violations and less than one percent were due to hypodermic syringes/needle act violations.

Category Eight - Maternal and Child Health

<u>Definition of Category:</u> One of the most significant areas for monitoring and comparison relates to the health of a vulnerable population: infants and children. This category focuses on birth data and outcomes as well as mortality data for infants and children. Because maternal care is correlated with birth outcomes, measures of maternal access to, and/or utilization of, care is included. Births to teen mothers are a critical indicator of increased risk for both mother and child.

Infant Mortality

Infant mortality is an important measure of a nation's health and a worldwide indicator of health status and social well-being. In 2005, the U.S. ranked 30th in infant mortality among 31 industrialized nations. In the past decade, critical measures of increased risk of infant death, such as new cases of low birth weight (LBW) and very low birth weight (VLBW) actually have increased in the United States. In addition, the disparity in infant mortality rates between whites and specific racial and ethnic groups persists. Although the overall infant mortality rate has reached record low levels, the national rate for African Americans remains twice that of whites.

Infant Deaths

In 2007, Will County had 77 infant deaths. The Will County infant mortality rate was 7.8 deaths per 1,000 births, higher than both the Illinois rate of 6.6 deaths and the national rate of 6.8. Because the number of infant deaths is so small, a 3-year average is sometimes used as a more reliable indicator based on more data. The 3-year average (2005-2007) Will County infant mortality rate is 6.3 deaths per 1,000 births.

As we look at thirteen year trend, the Will County infant mortality rate has fluctuated between a high of 10.3 deaths per 1,000 births in 1998 and 5.2 in 2003. From 2002 through 2006, the Will County infant mortality rate remained steady and then decreased sharply in 2007.

it is important to note that the Black infant mortality rate remained high (two to four times) that of the White rate in last 13 years. The 3-year (2005-2007) average Will County infant mortality rate is slightly higher than the HP 2010 target of 4.5 deaths per 1,000 births. The 3-year average Will County neonatal mortality rate is 4.8 and for post-neonatal mortality is 1.6 both higher than the HP 2010 targets of 2.9 and 1.2, respectively.

Prenatal Care

The goal of prenatal care is to monitor the progress of a pregnancy and to identify potential problems before they become serious for either mom or baby. All mothers-to-be benefit from prenatal care. Women who see a health care provider regularly during pregnancy have healthier babies, are less likely to deliver prematurely, and are less likely to have other serious problems related to pregnancy.

30-34 Years	31.2	91.9	
35 Years and Older	18.9	89.5	

Prenatal care is more likely to be effective if women begin receiving care early in pregnancy. In Will County in 2007, 88 percent of mothers (8,724) began prenatal care in their first trimester. Of these mothers, 91.7 percent were married and 91.1 percent had at least some college education. Typically, the likelihood of receipt of adequate prenatal care rises with maternal age. In 2007, the 15-19 year-old and the 20-24 year-old age groups had the lowest receipt of first trimester prenatal care, while 89.5% of 35-39 year-old mothers received early care. Obviously,

the need for education about early, continuous prenatal care is essential, particularly with younger mothers.

The Kotelchuk indicator reports the number and percent of pregnant women who receive adequate care, intermediate care and inadequate care during pregnancy. It attempts to characterize prenatal care (PNC) utilization on two independent and distinctive dimensions namely, adequacy of initiation of PNC and adequacy of received services (once PNC has begun). The initial dimension "Adequacy of Initiation of PNC" characterizes the adequacy of the timing of initiation of PNC.

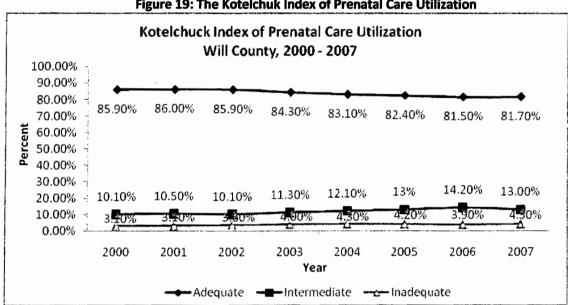

Figure 19: The Kotelchuk Index of Prenatal Care Utilization

The second dimension "Adequacy of Received Services" characterizes the adequacy of received PNC visits during the period after prenatal care is begun until the delivery. This dimension attempts to characterize if the woman received the appropriate number of prenatal care visits for the period she was receiving PNC services. It is based on American College of Obstetrics & Gynecology (ACOG) standards (one visit per month through 28 weeks gestation, one visit every 2 weeks through 36 weeks gestation, and one visit per week thereafter, adjusted for date of initiation of PNC). The two dimensions are combined into a single summary APNCU Index. Definitions of care are as follows:

- Inadequate care: PNC begun after the 4th month or under 50% of expected visits were
- Intermediate care: PNC begun by month 4 and between 50-79% of expected visits were received
- Adequate care: PNC begun by month 4 and 80-109% of expected visits were received
- Adequate Plus (intensive) care: PNC begun by month 4 and 110% or more of expected visits were received.

Adequate Plus care and Adequate care together form "early and adequate prenatal care". Over the 8-year period, early and adequate prenatal care has fluctuated between a low of 81.5 percent in 2006, and a high of 86 percent in 2001 in Will County. However, any increases in Adequate care over the past few years have been offset by the overall decrease. Overall, the county is not making progress with this indicator. In 2007, Will County early and adequate prenatal care was 81.7 percent, which does not meet the HP 2010 target of 90 percent.

Low Birth Weight (LBW) and Very Low Birth Weight (VLBW)

LBW is the risk factor most closely associated with neonatal death; thus, improvements in infant birth weight can contribute substantially to reductions in the infant mortality rate. Of all infants born at low birth weight, the smallest (those weighing less than 1,500 grams) are at highest risk of dying in their first year. However, some researchers have proposed that further improvement in the survival of VLBW infants is nearly impossible, and reduction in the underlying rate of VLBW births is the only avenue toward reduction of neonatal mortality rates.

Table 22 - Prevalence of Low Birth Weight & Very Low Birth Weight

	2003	2003	2007	IP2010
Weight Classification		Pe	rcent	
Low Birth Weight 1,500 to 2,499 grams (3 lbs. 5 oz. to 5 lbs. 8oz.)	5.6	6.6	6.3	5.0
Very Low Birth Weight 1,499 grams or less (3 lbs. 4 oz. or less)	1.4	1.5	1.4	0.9

Another important issue is the long-term effects of Low Birth Weight on affected infants who survive their first year, as these infants are more likely to experience long-term developmental and neurological disabilities than are infants of normal birth weight. Disparities are also evident in the differing prevalence of LBW and VLBW infants. In Will County, Black mothers have the highest percentage of LBW and VLBW babies, and mothers in the oldest and youngest age groups have the highest level of LBW infants. In 2007, 6.3 percent of Will County births were LBW, and 1.4 percent was VLBW. Will County does not meet the HP 2010 targets for LBW (5.0) and VLBW births (0.9).

Source: Illinois Department of Public Health, Birth File, 2007

For teenagers, the problems associated with unintended pregnancy are compounded, and the consequences are well documented. Teenage mothers are less likely to get or stay married, less likely to complete high school or college, and more likely to require public assistance. Teen mothers are also more likely to live in poverty than their peers who are not mothers. Infants

born to teenage mothers, especially mothers under age 15 years, are more likely to suffer from low birth weight, neonatal death, and sudden infant death syndrome. The infants may be at greater risk of child abuse, neglect, and behavioral and educational problems at later stages. The percent of live births to mothers under age 17 in Will County has remained in the range of 1.8% to 2.5% percent from 2000-2007, and well below the level for the state of Illinois.

Category Nine - Death, Illness and Injury

<u>Definition of Category:</u> Health status in a community is measured in terms of mortality (rates of death within a population) and morbidity (rates of the incidence and prevalence of disease). Mortality may be represented by crude rates or age-adjusted rates (AAM); by degree of premature death (Years of Productive Life Lost or YPLL); and by cause (disease - cancer and non-cancer or injury - intentional, unintentional). Morbidity may be represented by age-adjusted (AA) incidence of cancer and chronic disease.

General Health Status

The general health status of a community is defined by the percentage of adults who rate their health as excellent or very good, good or fair, or poor for the last 30 days; and by the number of days (in the last 30 days) that adults felt their physical health was not good. As shown in the chart below, the general health status of Will County improved from 2002 to 2008 and has consistently remained better than the general health status of Illinois. Also, the number of people who report having zero sick days has increased, confirming the gradual, consistent improvement of the general health status of Will County.

Table 24 - General Health Status of Will County and Illinois

	Will C	County	Illin	nois
	2002	2008	2002	2008

Leading Causes of Death/Mortality in Will County

Mortality surveillance is a routine public health activity, and death statistics provide some of the most reliable estimates because of the breadth of vital statistics surveillance. Trends in mortality over time between localities and between different subsets of the population can be useful in assessing health status. Locally, we can use mortality data to observe whether there are health disparities between races overall as well as for specific diseases.

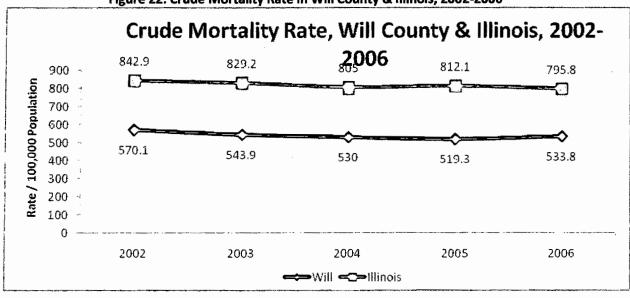

In 2007, there were 3,718 deaths in Will County. Eighty-nine percent of Will County deaths were White, and ten percent were Black. Four percent of Will County deaths were Hispanic.

Table 25 - Top Ten Leading Causes of Death in Will County, 2007

@ 1153	Number of Deaths	Recent of Deaths
All Causes	3,718	100%
Diseases of Heart	981	26.4%
Cancer	921	24.8%
Cerebrovascular Disease	212	5.7%
Chronic Lower Respiratory Diseases	184	5.0%
Accidents	109	2.9%
Diabetes	94	2.5%
Nephritis and Nephrosis	90	2.4%
Septicemia	75	2.0%
Pneumonia	74	2.0%
Alzheimer's Disease	59	1.6%

Source: Illinois Department of Public Health, Vital Statistics.

Figure 22: Crude Mortality Rate in Will County & Illinois, 2002-2006

Source: Illinois Department of Public Health, IPLAN Data System

Between 2000 and 2006, the Will County and Illinois mortality rates remained relatively stable. The Will County crude death rate ranges from 530 deaths per 100,000 population to 570 deaths per 100,000 population during 2002-2006. The Illinois mortality rate is higher and has a greater

range than Will County. It ranges from 796 deaths per 100,000 population to 843 deaths per 100,000 population.

The 2006 top ten leading causes of death are the same for both males and females, though the ranking of causes varies by gender. The first and second cause of death for males is Cancer, followed by Heart Disease. This order is reversed for females. Accidents (Unintentional Injuries) are the third leading cause of death for males, but the seventh leading cause for women. This category includes motor vehicle accidents and any other unintentional injury death that occurs because of a fall, drowning, firearm or other accidental cause.

Years of Potential Life Lost (YPLL)

YPLL is a summary measure of premature life years lost. Ranking the causes of mortality by YPLL illuminates the impact of deaths occurring at younger ages, which is useful in identifying preventable causes of death. Table 2 presents the 2006 YPLL for Will County, Illinois, and United States.

Table 26 - Years of Potential Life Lost (YPLL) to Age 65, 2006

	WillCounty		eto allino		0.8	
Causes	Number of Deaths	YPLL	Numbers of Deaths	YPLL	Number of Deaths	YPLL
Cancer	912	3,395	24,052	79,900	559,888	1,876,360
Accidents	99	3,852	4,401	88,292	121,599	2,383,722
Perinatal Conditions	35	2,270	698	43,807	14,442	937,301
Heart Disease	922	1,733	27,002	61,426	631,636	1,415,705
Congenital Malformations	16	868	451	21,364	10,489	492,864
Suicide	51	1,254	1,010	21,650	33,300	687,008
Motor-Vehicle Accidents	72	1,971	1389	31,128	18,573	611,717

Source: Illinois Department of Public Health, IPLAN Data System

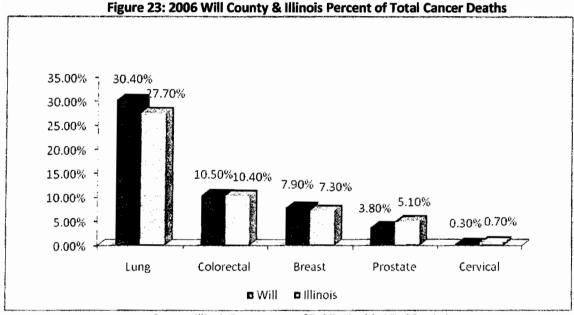

YPLL for Perinatal Conditions highlights premature infant death. As can be seen in Table 2, the 35 Will County perinatal deaths accounted for 2,270 years of potential life lost. Accidents are the second leading cause of premature mortality. Motor vehicle accidents are the largest subcategory of Accidents, and these tend to occur in younger population (15 to 44 years). As can be seen in the table, the 99 Accident deaths accounted for 3,852 years of potential life lost.

Finally, suicide contributes disproportionately to premature death with the 51 suicides accounting for over 1,971 years of potential life lost.

Cancer

Cancer is the second leading cause of death in Will County, Illinois and the United States. One out of two men and one out of three women in the United States will develop some type of cancer during their lifetime, and in 2009, it is estimated that 1,479,350 Americans will be diagnosed with cancer. In 2007, seven percent of U.S. adults had ever been told by a doctor or health professional that they had some form of cancer, though nationally, about 77% of all cancers are diagnosed in people age 55 and older.

One third of all cancer deaths are related to overweight or obesity, physical inactivity, and poor nutrition, and consequently, could be prevented. Moreover, at least half of all new cancer cases could be prevented or detected earlier through screening.

Source: Illinois Department of Public Health, Vital Statistics

In 2006, cancer claimed the lives of 912 Will County residents. Just under half of these cancer deaths were attributable to the following causes:

- Lung Cancer 277 deaths
- Colorectal Cancer 96 deaths
- Breast Cancer 72 deaths
- Prostate Cancer 35 deaths
- Leukemia 32 deaths
- Lip & Oral Cavity 16 deaths
- Cervical Cancer 3 deaths

Cancer Mortality

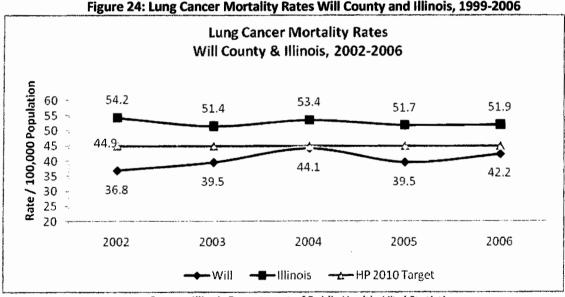

For the entire United States population in 2006, the death rate due to cancer was 186.9 deaths per 100,000 population, though there were significant differences among genders. For this same time period, the cancer death rate for males was 229.9 deaths per 100,000 population,

while women had a mortality rate of 157.8 deaths per 100,000 individuals. The rates for the state of Illinois were above national data, with a mortality rate of 197.6 deaths per 100,000 population due to cancer in 2006. Again, there was a difference among rates for men and women. For men, the cancer mortality rate was 245.6 deaths per 100,000 population, while it was 167.3 deaths per 100,000 population for women in Illinois.

In 2006, the Will County cancer mortality rate was 139 deaths per 100,000 population, which was below the state, nation and the HP 2010 target of 159.9 deaths per 100,000 population.

Lung Cancer

Lung cancer is the most common cause of cancer death among both females and males, accounting for approximately 28 percent of all cancer deaths in 2009. Cigarette smoking is the most significant risk factor for lung cancer, though other risk factors include environmental sources such as tobacco smoke and air pollution, radiation exposures, and occupational exposures to organic chemicals such as radon and asbestos. When an individual is diagnosed with lung cancer, treatment is determined by type and the stage of the cancer and can include surgery, radiation therapy, chemotherapy, targeted biological therapy, or any combination of the aforementioned.

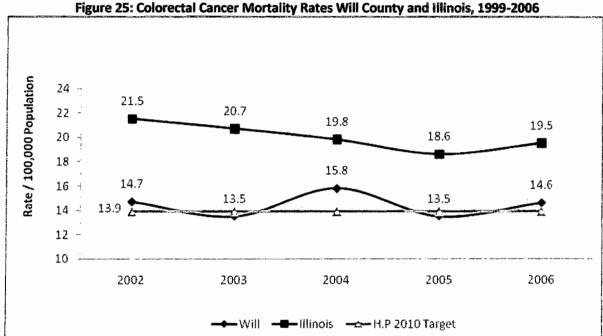

Source: Illinois Department of Public Health, Vital Statistics

Figure 24 shows the Will County and Illinois rates of lung cancer mortality. The Will County mortality rate is consistently lower than that of the state and the HP 2010 goal. In 2006, the Will County lung cancer mortality rate of 42.2 deaths per 100,000 population was below the HP 2010 target of 44.9 deaths per 100,000 population; however, the Illinois rate of 51.9 deaths per 100,000 population shows a need for improvement.

Colorectal Cancer

Colorectal cancer is the third most commonly diagnosed cancer among men and women, as well as the third leading cause of cancer deaths among both genders. Both the 2006 Will County (14.6) and Illinois (19.5) colorectal cancer mortality rates exceed the HP 2010 target of 13.9 deaths per 100,000 population. As can be seen in Graph 5, mortality rates for Will County have remained relatively steady over time, while the rates for Illinois have decreased slightly from 2002 to 2005.

Source: Illinois Department of Public Health, Vital Statistics

Breast Cancer

Breast cancer is the most common type of cancer among women and accounts for one of four cancer diagnoses in women in the United States. Mortality from breast cancer can be reduced substantially if the tumor is discovered at an early stage, and mammography is the most effective method for detecting these early malignancies, though clinical breast exams and monthly breast self-examination also prove beneficial in early detection. In 2006, the national mortality rate due to breast cancer was 24.5 deaths per 100,000 women. The rate for the state of Illinois was similar to this at 24.1 deaths per 100,000 women. As for Will County, the 2006 breast cancer mortality rate was 22.1 deaths per 100,000 women, marginally lower than the state and nation, and the HP 2010 target, at 29.3 deaths per 100,000 women.

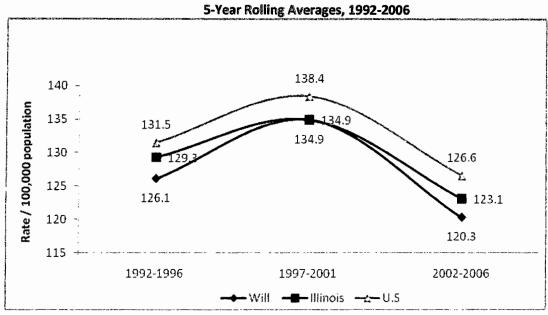

Figure 26: Female Breast Cancer (Invasive) Age Adjusted Incidence Rates Will County, Illinois and U.S.

Source: Illinois Department of Public Health, Cancer Registry

As shown in Figure 26, breast cancer incidence in Will County has remained lower than the Illinois and U.S. five-year averages since 1992. Many breast cancer risk factors, such as age, family history of breast cancer, long menstrual history, mammographic densities, previous breast disease, and race and ethnicity, are unchangeable. However, obesity and smoking are well-established breast cancer risks for women that can be addressed through smoking cessation, a healthy diet, vigorous physical activity and maintaining a healthy body weight.

Prostate Cancer

Prostate cancer is the most commonly diagnosed cancer among men, and is the second leading cause of male cancer death. After increasing from 1995 to 2001, national incidence rates of prostate cancer have been decreasing since 2001 by 4.4 percent per year.

In 2007, there were 42 prostate cancer deaths in Will County, and in 2005, there were 35 deaths. In 2006, there were 41 prostate cancer deaths in the County for a rate of 12.8 prostate cancer deaths per 100,000 males. This figure is well below the HP 2010 target of 28.8, as well as the rate for Illinois, which were 25.1 deaths per 100,000 males in 2006. As evident in Figure 27, the prostate cancer incidence rate for Will County has increased from 1996 to 2006, whereas Illinois and the United States have shown an overall decrease since 1996. Moreover, the rate for Will County has remained below the national rate, and over time until 2002.

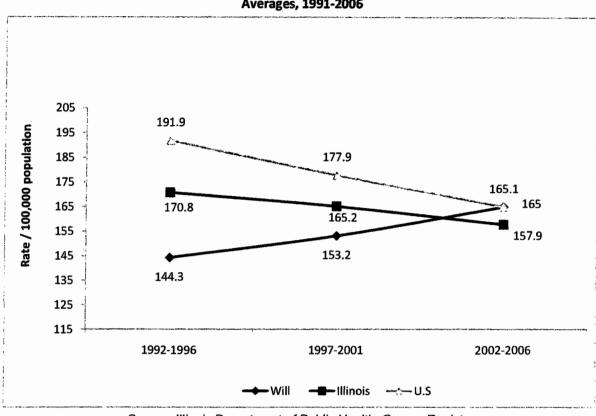

Figure 27: Prostate Cancer Age Adjusted Incidence Rates Will County, Illinois and U.S. 5-Year Rolling Averages, 1991-2006

Source: Illinois Department of Public Health, Cancer Registry

Risk factors for prostate cancer include age, ethnicity, family history and dietary fat. Sixty-three percent of all prostate cancer occurs in men aged 65 years and older, and though it is not known why, African American men have the highest incidence rates of prostate cancer in the world and are significantly higher than whites are.

Cervical Cancer

Cervical cancer used to be one of the most common cause of cancer deaths in women, but the mortality rate due to cervical cancer declined by 74 percent from 1955 to 1992, and continues to decline by nearly four percent each year. The main reason for the drop in mortality rates from cervical cancer was the increased use of the Pap test, which can detect changes in the cervix before cancer develops, or can discover cancer in its earliest, curable stage.

In Illinois in 2006, the cervical cancer mortality rate was 2.5 deaths per 100,000 females, which is above the HP 2010 target of 2.0. For Will County, in 2007, there were 6 cervical cancer deaths. In 2006, there were 3 deaths, and in 2005, there were 9 cervical cancer deaths among

Will County residents. Cervical cancer deaths represent less than one percent of all cancer deaths, and with 1.8 cervical cancer deaths per 100,000 females in 2006, the rate for Will

County is below the HP 2010 target. As evident in Figure 28, cervical cancer incidence rates have shown an overall decrease over time.

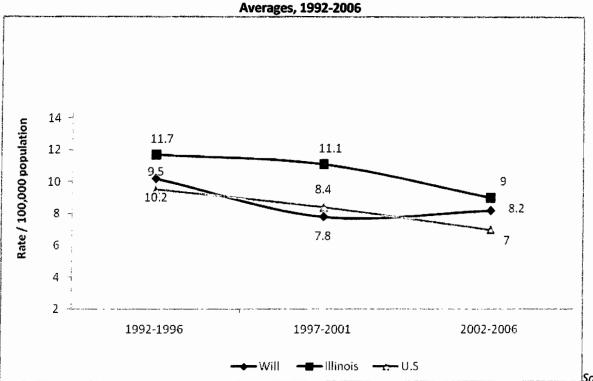

Figure 28: Cervical Cancer Age Adjusted Incidence Rates Will County, Illinois and U.S. 5-Year Rolling
Averages, 1992-2006

urce: Illinois Department of Public Health, Cancer Registry

Mortality due to Motor Vehicle Accidents

Motor vehicle crashes are the most common cause of serious injury but they are often predictable and preventable. Increased use of safety belts and reductions in driving while impaired are two of the most effective means to reduce the risk of death and serious injury of occupants in motor vehicle crashes.

In 2007, 41,059 people died as a result of motor vehicle crashes and an additional 2.5 million people were injured. Despite this unfortunate number, it is part of a steady decline in the number of motor vehicle fatalities in the U.S. In 2005, there were 43,510 and in 2009, that number had decrease to 33,963.

In the U.S. in 2008, 30 percent of all traffic fatalities were alcohol related. Each year in the United States, it is estimated that more than 120 million episodes of impaired driving occur among adults. The highest intoxication rates in fatal crashes in 2008 were recorded for drivers aged 21 to 24 years (34 percent). Teens account for 17 percent of all drivers involved in drunken driving accidents. Young drivers who have been arrested for driving while impaired are more

than four times as likely to die in future alcohol-related crashes. In addition, teens are more likely than any age group to be killed while driving under the influence.

In Illinois, the number of motor vehicle fatalities has decreased in the last few years. In 2007, there were 1,248 motor vehicle fatalities in the state of Illinois and in 2008, there were 1,043. This represents a 16 percent decrease in the number of motor vehicle fatalities. The rate of motor vehicle fatalities per 100,000 population was 11.4 in 2000 and had decreased to 8.08 by 2008. These numbers reflect a positive change for the State.

In contrast, motor vehicle fatalities in Will County have not been decreasing over the last few years. In 2006, motor vehicle accidents in Will County contributed to 2 percent of all deaths. This was an increase from 1.7 percent in 2000. Additionally, in 2007, there were 43 motor vehicle fatalities and in 2008, there were 44 motor vehicle fatalities.

Pneumonia/Influenza

Pneumonia is an infection of the lungs that can cause mild to severe illness in people of all ages. Globally, pneumonia kills more than one and a half million children less than 5 years of age each year. This is greater than the number of deaths from any other infectious disease, such as AIDS, malaria or tuberculosis. Access to vaccines and treatment (like antibiotics and antivirals) can help prevent many pneumonia-related deaths. In the U.S., there are several vaccines that prevent infection by bacteria or viruses that may cause pneumonia. These vaccines include: Pneumococcal, *Haemophilus influenzae* type b (Hib), Pertussis (whooping cough), Varicella (chickenpox), Measles; and Seasonal and 2009 H1N1 influenza (flu) vaccines.

In 2006, 1.2 million people in the U.S. were hospitalized with pneumonia and 55,477 people died from the disease. In Illinois, 52,840 hospitalizations were attributed to pneumonia and 2,671 people died from the disease, which translates, to 2.6 percent of all Illinois deaths in 2006. This is a decrease from 2000, in which 2.7 percent of all Illinois deaths were attributed to pneumonia.

In Will County in 2006, 2,173 people were hospitalized due to pneumonia and 74 people died because of the infection. This translates to 2.1 percent of all Will County deaths attributed to pneumonia. While lower than the percent of deaths statewide, it is still an increase from 2000, during which 1,668 people were hospitalized and 57 people died (1.9 percent of all deaths).

Stroke

Stroke is the third leading cause of death in the United States and Will County, accounting for 5.7 percent of all Will County deaths in 2007. Despite the fact that a number of risk factors for stroke are preventable, such as tobacco use, alcohol use, and physical inactivity, stroke continues to be a leading cause of serious long-term disability in our nation.

Table 27 - Stroke Mortality Rate / 100,000, 2000-2007 (Healthy People 2010 Goal: 48 per 100,000)

Year	Will County	Illinois
2000	37.2	59.7
2001	37.1	57.6
2002	33.3	56.9
2003	34.5	54.4
2004	35.8	50.9
2005	27.7	48.8
2006	30.8	46.6
2007	31.6	N/A

Source: IPLAN Data System

In 2007, two percent of the United States population had ever been told by a health care professional that they had experienced a stroke, according to the NHIS. In 2007, the stroke mortality for Will County was 31.6 deaths per 100,000 population, which is below the HP 2010 target of 48 deaths per 100,000, and as shown in Table 27, is a decrease from earlier years.

Other Chronic Illnesses and Disease

<u>Description of Category -</u> Chronic diseases, such as heart disease, stroke, cancer, diabetes, arthritis, osteoporosis and respiratory diseases, can significantly impair one's quality of life and are the leading causes of hospitalizations and mortality in our country. Every year, seven out of ten deaths in the U.S. are due to chronic illnesses, and in 2005, an estimated one out of every two adults had at least one chronic condition, affecting a total of 133 million Americans.

Chronic Lower Respiratory Disease (COPD)

Chronic Lower Respiratory Disease, formerly known as COPD, is a progressive disease and is one of the top five leading causes of death in the United States and Will County. This disease develops slowly over time. The leading cause is cigarette smoking; other risk factors include long-term exposure to lung irritants, such as air pollution, chemical fumes, or dust.

Table 28 - Number of COPD Deaths in Will County, 2000-2007

2000	20001	2002	2003	2004	2005	2003	2007
123	139	130	160	127	167	146	184

Source: Illinois Department of Public Health, Vital Statistics

For Will County in 2007, there were 27.5 deaths per 100,000 adults, well below the HP 2010 target of 60 deaths per 100,000 population.

<u>Arthritis</u>

The various forms of arthritis affect more than 25 percent of the U.S. adult population—over 46 million persons—making arthritis one of the most common conditions in the United States. If current trends continue, it is estimated that by 2030, 67 million adults will suffer from doctor-diagnosed arthritis.

According to the Illinois Behavioral Risk Factor Surveillance Survey 2005, 25.6 percent of the Will County adult population had been diagnosed with arthritis by a health professional. Moreover, 23.8 percent of the adult population had activities that were limited by joint symptoms, which is above the HP 2010 target of 21 percent. These figures are similar to national statistics in which 20 percent of adults had ever been told by a doctor that they had some form of arthritis in 2007, and 24 percent of adults had chronic joint symptoms.

Osteoporosis

Osteoporosis is a disease that is characterized by low bone mass and structural deterioration of bone tissue. The major health consequence of osteoporosis is an increased susceptibility to fractures, and nationally, approximately two million fractures per year are attributed to the disease. One in two women and one in four men aged 50 years and older will experience an osteoporotic-related fracture in their lifetime. Nationally in 2005, health care costs for these fractures were an estimated \$19 billion, and it is estimated that this amount will increase to around \$25.3 billion by 2025.

According to the 2005 Behavioral Risk Factor Survey, approximately 27.3 percent of Illinois Collar Counties (DuPage, Kane, Lake, McHenry, and Will County) residents had ever been told that they have osteoporosis or thinning of the bones. This number is significantly higher than the HP 2010 target of eight percent and indicates an area of opportunity for healthcare.

Diabetes

The occurrence of diabetes, especially type 2 diabetes, as well as associated diabetes complications, is on the rise. The number of persons with diabetes has increased unabated over the past decade and if these trends continue, one in three Americans who were born in the year 2000 will develop diabetes during their lifetime. Both Will County and the state of Illinois have followed the national trends for the prevalence of diabetes and have been increasing over time, as evident in Table 29.

Table 29 -Percent of Population Told They Have Diabetes by a Doctor

Year Teel?	WIII	(III)	<u>us</u>

2006	7.5	8.2	8.1
2008	6.7	8.8	9.0

Sources: Illinois BRFSS, CDC BRFSS

Over the past decade, diabetes has remained the seventh leading cause of death in the United States. Deaths due to diabetes fluctuated in Will County during 2000-2008. In Will County in 2007, the rate of diabetes deaths was 13.8 deaths per 100,000 individuals, well below the HP 2010 target of 45 deaths per 100,000 individuals. However, this number may be misleading as the deaths shown in Table 30 are deaths solely from diabetes (as the primary cause of death), though diabetes is likely to be underreported as a cause of death. Studies have found that only 35 to 40 percent of those deceased have diabetes listed anywhere on the death certificate and only about 10 to 15 percent have it listed as the underlying cause of death. Rather, conditions associated with complications from diabetes, such as cardiovascular disease, coronary heart disease, non-traumatic lower-extremity amputations, and end-stage renal disease, are generally the final conditions that result in death and therefore are the only causes listed on the death certificate. The risk of death for an individual with diabetes is twice that of an individual of the same age without the disease.

Table 30 - Number of Diabetes Deaths in Will County, 2000-2006

2000	2001	2002	2003	2004	2005	2006	2007

Asthma

Asthma can occur in people of all ages, impacting an estimated 22.9 million people in the United States. According to the 2008 Behavioral Risk Factor Survey, approximately 12.7 percent of Will County adults had ever been told they had asthma, and 16.2 percent of households contained a child with asthma. According to the 2007 National Health Interview Survey, 11 percent of adults had ever been told they had asthma. The rates for the state of Illinois are a little higher; in 2008, 13.2 percent of adults had ever been told by a doctor they have asthma.

Table 31 - Number of Asthma Deaths in Will County, 2000-2006

2000	2001	2002	2003	2004	2003	2006	2007
6	4	5	4	5	4	6	1

Source: Illinois Department of Public Health, Vital Statistics

In Will County in 2006, the total crude rate of asthma deaths per 100,000 was approximately 0.9, which is below the HP 2010 target of 1 death per 100,000. As provided in Table 31, the numbers of asthma deaths in Will County are relatively low.

End-stage Renal Disease

End-stage renal disease occurs when one's kidneys are not able to function at the level necessary to sustain day-to-day life, and diabetes is the most common cause in the United

States. In most cases, it occurs when kidney failure has progressed to the point that kidney function is under 10 percent of normal.

Table 32 - Number of Deaths Due to Nephrosis/Nephritis in Will County, 2000-2006

2000	2001	2002	2003	2004	2003	2003	2007
53	41	52	63	62	62	83	90

Source: Illinois Department of Public Health, Vital Statistics

Table 32 shows the number of deaths due to kidney disease for Will County from 2000 through 2007. In 2007, the mortality rate for Will County due to end-stage renal disease was 13.4 deaths per 100,000 individuals.

Diseases of the Heart

Nationally, heart disease is the leading cause of death and is responsible for 30 percent of all mortality. This is mimicked in Will County where heart disease is the leading cause of death, and in 2007, accounted for 26 percent of all deaths. The largest portion of these deaths was due to coronary heart disease, which was responsible for 68 percent of all heart disease deaths. In the United States in 2007, 11 percent of adults had ever been told by a doctor or health professional that they had heart disease, and 6 percent had ever been told that they had coronary heart disease. This disease continues to be a major cause of disability and a significant contributor to increases in healthcare costs.

As shown in Figure 29, the Will County and Illinois rates of mortality due to coronary heart disease have been decreasing over time. Moreover, the mortality rate for Will County for the years 2000 through 2006 is below the HP 2010 target of 166 deaths per 100,000 population, as well as below the rates for Illinois.

Coronary Heart Disease Mortality Rates Will County and Illinois, 2002-2006 200 181.4 173.5 180 Rate / 100,000 Population 166 160 140 120 134.5 123.1 100 109.3 80 98.9 96 60 40 20 0 2002 2003 2004 2005 2006 → Will → Illinois → H.P. 2010 Target

Risk Factors for Heart Diseases

Some lifestyle factors and health conditions have the ability to put individuals at higher risk for developing heart disease. These include things such as hypertension, high cholesterol levels, diabetes, tobacco use, obesity, having a diet low in fruit and vegetable consumption and high in saturated fat and cholesterol, among others. By making changes to one's lifestyle regarding these factors, assumptions can be made that heart disease risk will decrease.

Table 33 - Risk Factors for Heart Disease

RiskFactor	Will County 2003	Illinois 2003
High Blood Pressure		
Told BP is High	22.9%	27.9%
High Cholesterol		
Never Checked	7.2%	22.0%
Checked <= 1 Year ago	71.1%	70.1%

Overweight or Obese		
Overweight Adults	38.6%	37.8%
Obese Adults	18.7%	23.9%

Source: Illinois Behavioral Risk Factor Surveillance System (BRFSS)

High Blood Pressure (Hypertension)

In 2007-2009, 27.9 percent of Will County adults were ever told by a health care professional that their blood pressure was high. Of these individuals, 67 percent are currently taking blood pressure medication. Will County percentages are below the 2008 state of Illinois findings where 27.6 percent of adults had ever been told they have high blood pressure and 76.3 percent were taking medication to aid this problem. When comparing these figures to national findings from 2007, 23 percent of adults had been told by a doctor or health professional on two or more visits that they had hypertension. The percent of Will County residents with high blood pressure exceeds the HP 2010 target and the national standings, though below the State, and as shown in Table 34, has been increasing over time.

Table 34 - Percent of Will County Adults Told They Have High Blood Pressure

2002	2003	2003
22.4%	24.1%	27.9%

Source: Illinois Behavioral Risk Factor Surveillance System (BRFSS)

High Blood Cholesterol

According to the Illinois Behavioral Risk Factor Surveillance System in 2008, 26.4 percent of Will County residents had ever been told by a healthcare professional that their cholesterol reading was high; a figure that greatly exceeds the HP 2010 target. In 2007, 71.1 percent of Will County adults had their blood cholesterol checked within one year, this is a decrease from 2003 in which 88.5 percent of Will County adults had their blood cholesterol checked within one year or less.

Category Ten – Communicable Disease, Infectious Disease and Sentinel Events <u>Definition of Category</u>: Measures within this category include diseases which are usually transmitted through person-to-person contact or shared use of contaminated instruments or materials.

Sentinel events are those cases of unnecessary disease, disability, or untimely death that could be avoided if appropriate and timely medical care or preventive services were provided. These include vaccine-preventable illness, late stage cancer diagnosis, and unexpected syndromes or

infections. Sentinel events may alert the community to health system problems such as inadequate vaccine coverage, lack of primary care and/or screening, a bioterrorist event, or the introduction of globally transmitted infections

According to the World Health Organization (WHO), infectious diseases are defined as diseases that are caused by pathogenic microorganisms, such as bacteria, viruses, parasites or fungi, and can be spread directly or indirectly from one person to another. Infectious diseases are a leading cause of morbidity and mortality worldwide and in the United States. In recent decades, however, new threats to the health of populations globally and here in Will County have been identified from the presence of emerging infectious diseases, or diseases that are newly appearing in the population or have previously existed but are rapidly increasing in incidence or geographic range. Such diseases include West Nile Virus, Severe Acute Respiratory Syndrome (SARS), Avian Influenza A, and most notably, 2009 H1N1 Influenza.

Vaccine-Preventable Diseases

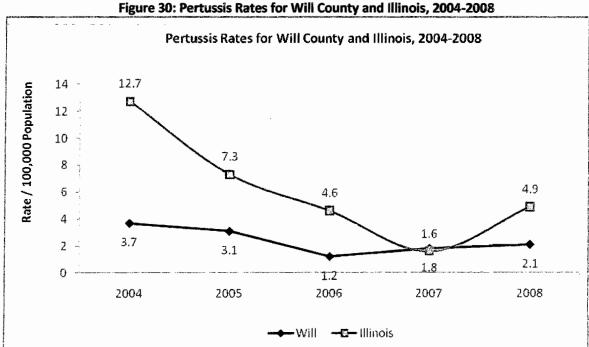

Table 35 - Vaccine Preventable Disease, Numbers of Cases in Will County, 2004-2008

N/R = Not Reportable, * Chickenpox reporting for persons <20 years became reportable for individual cases, yearround effective March 3, 2008. Prior to that data, reporting for the under 20 was aggregate, school-based reporting. Source: Illinois National Electronic Disease Surveillance System (INEDSS)

Pertussis

Pertussis is a highly communicable, vaccine-preventable disease caused by bacteria that spreads through direct contact with discharges from respiratory mucous membranes of infected persons. Pertussis is endemic in the United States where epidemics occur every 3-5 years. The most recent epidemic occurred in 2005 (25,616 reported cases). Major complications most frequently occur in infants and young children, in whom the disease can be fatal. Ten children died in the United States in 2007, and most deaths occur in the unvaccinated. Adolescents and adults become susceptible when immunity wanes, but can receive a booster shot of the combination vaccine (called Tdap). The graph below shows recent trends in case rates for Will County, and Illinois. The case rate for Will County remains above the HP 2010 target of 0.7 cases per 100,000.

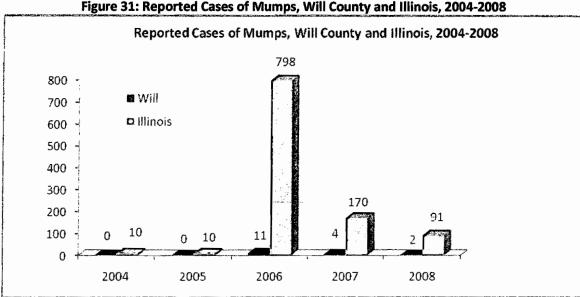

Sources: Illinois National Electronic Disease Surveillance System, Illinois Department of Public Health and Center for Disease Control and Prevention

Mumps

Mumps is a contagious respiratory disease caused by a virus that spreads by mucus or droplets from the nose or throat of an infected person, usually when a person coughs or sneezes. In 1967, the live mumps vaccine was introduced and the recommendation for its routine use was implemented in 1977 by the United States vaccination program. Prior to this, mumps was a common illness in infants, children and young adults. Because most people have now been vaccinated, mumps has become a rare disease in the United States. In 2006, reports of mumps increased both for Illinois, which reported 798 cases, and Will County with 11 cases reported, primarily due to the outbreak associated with unimmunized/partially immunized individuals

exposed during international travel. Figure 31 summarizes the past 5 years trend in reported Mumps cases in Will County.

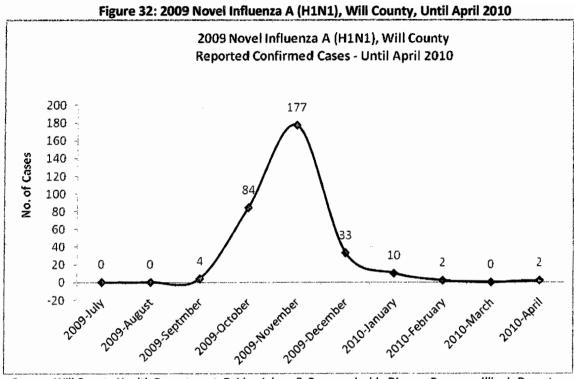

Source: Illinois National Electronic Disease Surveillance System

Measles

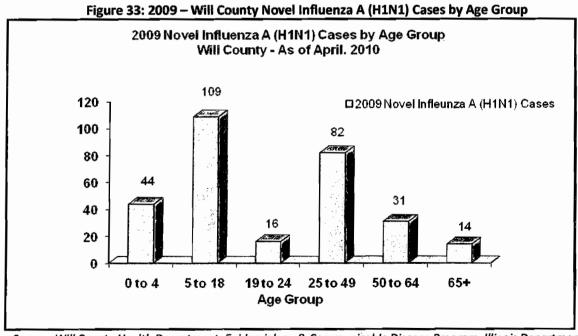

Measles is a highly contagious respiratory disease caused by a virus that spreads through the air by breathing, coughing or sneezing. Symptoms include fever, runny nose, cough and a rash all over the body. In 1 in 10 children, measles also results in an ear infection, 1 in 20 may get pneumonia and 1 or 2 of 1,000 die. This disease can also cause severe complications to pregnant women, including miscarriage or premature birth. Measles is very rare when vaccination rates are high; however, sporadic cases occur in the United States as a result of importation due to travel to countries where measles is endemic. Worldwide there are about 10 million cases and 200,000 deaths annually. Illinois experienced a measles outbreak in 2008 primarily among an unvaccinated population. No confirmed cases have been reported in Will County residents in the last 5 years.

2009 (novel) H1N1 influenza A

In April 2009, a novel strain of influenza was detected by CDC viral surveillance. During the course of the next several months, two significant waves of disease activity were detected in the patterns of cases reporting for Will County, Illinois and the United States. As of April 30, 2010, 313 laboratory-confirmed cases were reported in Will County. During the course of the outbreak, as disease activity increased, case reporting was limited to hospitalizations and deaths to conserve resources. The following graph tracks the monthly onset among confirmed cases due to 2009 H1N1 Influenza through April 2010. There were a total of 134 hospitalized cases and 1 death reported among 313 confirmed cases. In some situations, the primary cause of death may have been due to another condition. Case rates were highest in the 5-18 years and 25-49 years age groups as seen in Figure 33.

Immunizations

All children entering grade school require proof of immunization against most of the above mentioned vaccine preventable illnesses, though 80 percent of these vaccines are needed prior to the age of two. Only vague estimates of Will County's immunization rates for children under age five exist. The National Immunization Survey (NIS), sponsored by the National Center for Immunizations and Respiratory Diseases (NCIRD), is conducted jointly by the National Center for Health Statistics (NCHS), the Centers for Disease Control and Prevention, and NCIRD and monitors childhood immunizations at the state and national level. The target population for the NIS is children between the ages of 19 and 35 months. Results of the 2008 NIS for Illinois estimated vaccination coverage levels at 74.8 percent for the combined 4:3:1:3:3:1 vaccination series which including: ≥4 DTP, ≥3 doses Polio; ≥1 MMR, ≥3 Hib, ≥3 Hep B vaccine and ≥1 Varicella.

The percentage of children in Will County being immunized by the age of 2 years old continues to show steady gains through 2004 – 2007. There is a slight decrease in the percentage of children immunized in 2008 and 2009. Vaccines were added to the list of what needed to be included to be up to date (Varicella was added in 2008, and Prevenar was added in 2009).

<u>Tuberculosis</u>

Tuberculosis (TB) is a disease caused by a bacterium, Mycobacterium tuberculosis, and is spread through the air from person to person when an individual with active TB disease of the lungs or throat coughs, sneezes, speaks, or sings. Active cases of TB reported in Will County, Illinois, state region and the U.S. for 2004-2008 are summarized in table below. Will County rates fluctuate above and below the rates for neighboring counties, Illinois and the US, but remain well below the city of Chicago and Suburban Cook County.

Table 36 - Tuberculosis Cases and Rates per 100,000, 2004-2008

Other Infectious Diseases

While advances have been made in the research and treatment of infectious diseases during the 20th century, they continue to be the leading cause of death worldwide. Though there are a number of reasons for this, primary causes include ecological changes, agricultural development, changes in human demographics and behavior, increases in international travel and commerce, globalization, and microbial adaptation and change. There are a number of food and water borne illnesses and other diseases transmitted by viruses that are not able to be prevented through vaccination and thus continue to occur in the population.

Table 37 - Selected Reportable Infectious Diseases

Sexually Transmitted Diseases

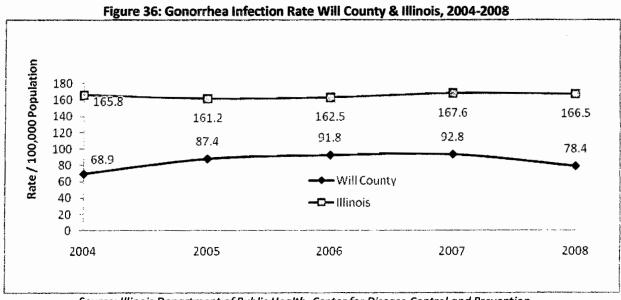

Sexually transmitted diseases (STDs), also known as sexually transmitted infections (STIs), refer to more than 25 diseases caused by pathogens transmitted primarily through sexual activity. These diseases continue to be a challenge to public health systems and with more than 19 million new infections occurring every year, the United States has the highest rate of STD infection of any industrialized country. These diseases can affect individuals from all backgrounds and economic levels and are widespread, though almost half of all new cases occur in those 15 to 24 years of age. In addition to the effects that these diseases have on individuals, in 2007, the economic burden on our nation's healthcare system was an estimated \$15.3 billion due to STDs. The two most common reportable STDs in the U.S. are Chlamydia and Gonorrhea, and the rates of infection have been increasing over recent years. This is even more significant because the true numbers for these diseases are difficult to assess as the majority of cases go undiagnosed. In addition, many people remain unaware of the risk and consequences of STDs.

Chlamydia is the most commonly reported notifiable disease Illinois and rates have been steadily increasing over recent years, as seen in Figure 35 below. While the Will County rate has followed this trend, it remains well below that of Illinois. There were 1,666 cases of Chlamydia in Will County in 2008.

Figure 35: Chlamydia Infection Rate per 100,000, Will County & Illinois, 2004-2008 **Chlamydia Infection Rate** Will County & Illinois, 2004-2008 600 Rate / 100,000 Population 476.4 446.6 500 431.5 O 407.1 379.9 O 400 331.7 D 312.4 264.4 300 237.3 190.1 200 → Will County 100 - Illinois 2004 2005 2006 2007 2008

Source: Illinois Department of Public Health, Center for Disease Control and Prevention

Gonorrhea is the second most commonly reported notifiable disease Illinois and rates have been steady increasing over recent years, as seen in Figure 36 below. The rate in Will County has steadily increased from 2004 to 2007, but started declining in 2008. The rate in Will County remains well below that of Illinois. There were 394 cases of Chlamydia in Will County in 2008, a 15% decrease from the previous year

Source: Illinois Department of Public Health, Center for Disease Control and Prevention

The following table, Table 38, shows the number and rate of early stage syphilis and a comparison of primary and secondary syphilis infections for a five-year period for Will County,

Illinois and the U.S. Over this time, the Will County rate of syphilis infections has remained relatively steady, despite an increase in 2006 and 2008, and has continually been below the rate for the state of Illinois and the U.S. In 2008, Will County had 10 new cases of primary and secondary syphilis.

HIV/AIDS

Acquired immunodeficiency syndrome, or AIDS, is the final stage of human immunodeficiency virus (HIV) infection. During the mid-to-late 1990s, advances were made in HIV treatments, enabling the progression from HIV infection to AIDS to be slowed. This caused a dramatic decrease in the number of deaths in those living with AIDS in the United States, though the number of new infections that occurs yearly has not changed. In 2006, an estimated 56,300 individuals were infected with HIV in the United States.

ALTERNATIVES

The alternatives considered for this project are:

- (1) Do Nothing; (2) Expand the Existing Riverside Emergency Department;
- (3) Construct the proposed project in conjunction with the Riverside Emergency Department; or (4) Construct a new hospital on the proposed site.

Alternative I- Do Nothing

The first option of do nothing was rejected by the applicant because it does not improve access to care for the residents of the proposed service area. While it is obviously the least expensive alternative, it still leaves the residents of the proposed service area without Emergency Department services within reasonable travel time.

Alterative II- Expand the Existing Emergency Department at Riverside Medical Center

The second alternative was rejected because it too offered no significant improvement in access to emergency care for the majority of residents in the proposed service area. The current Emergency Department at the hospital serves patients daily from the proposed service area, however, the further that one proceeds away from Riverside Medical Center northbound along Interstate 57, the further the distance it is to access Emergency Department services. It is well past the applicant's proposed location and further into the south suburban area until one reaches where Palos Community Hospital, Ingalls Memorial Hospital and the St. James facilities are located and where those facilities become the dominant providers of Emergency Department services. No cost analysis for this alternative was developed because this alternative would not meet the applicant's established goals for this project and thus the alternative was rejected.

Alternative III- Construct a Free-Standing Emergency Center and an Ambulatory Care Campus.

The Illinois Legislature recently passed legislation indicating a need to establish a free-standing Emergency Center in areas such as where the proposed facility is to be located. [Attachment 13(a)] It was determined that the applicant could meet that need by developing the proposed project in conjunction with the existing hospital based ED. The free-standing Emergency Center would provide improved access to emergency care for the residents within the defined target area and would ensure the availability of inpatient services when needed. The proposed emergency center will also refer patients for inpatient care to the hospitals that are closest to the patient's home.

Silver Cross Hospital will serve as the resource hospital, since it is the closest hospital to the proposed site.

The ability to utilize Riverside Medical Center as a training site for EMS staff, to utilize the existing established ED protocols, and to augment the applicants existing relationships with ambulance services and other health care providers in the target market area makes this alternative the best one available to the applicant.

ALTERNATIVES

Alternative IV- Construct a New Hospital

A fourth alternative was briefly considered, and rejected. The fourth alternative was to construct a new hospital on the proposed site of the Emergency Center. This alternative was rejected due to the number of excess beds currently located in the planning area and the cost of constructing such a facility. The cost projection were not made for this alternative, since the proposed project will meet the current needs and is less costly than even the smallest hospital.

Public Act 097-1112

HB5142 Enrolled

LRB097 16739 DRJ 61914 b

AN ACT concerning regulation.

Be it enacted by the People of the State of Illinois, represented in the General Assembly:

Section 5. The Emergency Medical Services (EMS) Systems Act is amended by changing Section 32.5 as follows:

(210 ILCS 50/32.5)

Sec. 32.5. Freestanding Emergency Center.

- Emergency Center (FEC) license to any facility that has received a permit from the Health Facilities and Services Review Board to establish a Freestanding Emergency Center if the application for the permit has been deemed complete by the Department of Public Health by January 1, 2015 March 1, 2009, and:
 - (1) is located: (A) in a municipality with a population of 50,000 75,000 or fewer inhabitants; (B) within 50 20 miles of the hospital that owns or controls the FEC; and (C) within 50 20 miles of the Resource Hospital affiliated with the FEC as part of the EMS System;
 - (2) is wholly owned or controlled by an Associate or Resource Hospital, but is not a part of the hospital's physical plant;
 - (3) meets the standards for licensed FECs, adopted by rule of the Department, including, but not limited to:
 - (A) facility design, specification, operation, and maintenance standards;
 - (B) equipment standards; and
 - (C) the number and qualifications of emergency medical personnel and other staff, which must include at least one board certified emergency physician present at the FEC 24 hours per day.
 - (4) limits its participation in the EMS System strictly to receiving a limited number of BLS runs by emergency medical vehicles according to protocols developed by the Resource Hospital within the FEC's designated EMS System and approved by the Project Medical Director and the Department;
 - (5) provides comprehensive emergency treatment services, as defined in the rules adopted by the Department pursuant to the Hospital Licensing Act, 24 hours per day, on an outpatient basis;
 - (6) provides an ambulance and maintains on site ambulance services staffed with paramedics 24 hours per day;
 - (7) (blank);
 - (8) complies with all State and federal patient rights provisions, including, but not limited to, the Emergency Medical Treatment Act and the federal Emergency Medical Treatment and Active Labor Act;

ATTACHMENT 13(a)

- (9) maintains a communications system that is fully integrated with its Resource Hospital within the FEC's designated EMS System;
- (10) reports to the Department any patient transfers from the FEC to a hospital within 48 hours of the transfer plus any other data determined to be relevant by the Department;
- (11) submits to the Department, on a quarterly basis, the FEC's morbidity and mortality rates for patients treated at the FEC and other data determined to be relevant by the Department;
- (12) does not describe itself or hold itself out to the general public as a full service hospital or hospital emergency department in its advertising or marketing activities;
- (13) complies with any other rules adopted by the Department under this Act that relate to FECs;
- (14) passes the Department's site inspection for compliance with the FEC requirements of this Act;
- (15) submits a copy of the permit issued by the Health Facilities and Services Review Board indicating that the facility has complied with the Illinois Health Facilities Planning Act with respect to the health services to be provided at the facility;
- (16) submits an application for designation as an FEC in a manner and form prescribed by the Department by rule; and
- (17) pays the annual license fee as determined by the Department by rule.
- (a-5) Notwithstanding any other provision of this Section, the Department may issue an annual FEC license to a facility that is located in a county that does not have a licensed general acute care hospital if the facility's application for a permit from the Illinois Health Facilities Planning Board has been deemed complete by the Department of Public Health by January 1, 2014 March 1, 2009 and if the facility complies with the requirements set forth in paragraphs (1) through (17) of subsection (a).
- (a-10) Notwithstanding any other provision of this Section, the Department may issue an annual FEC license to a facility if the facility has, by <u>January 1, 2014</u>, <u>March 31</u>, 2009, filed a letter of intent to establish an FEC and if the facility complies with the requirements set forth in paragraphs (1) through (17) of subsection (a).
 - (b) The Department shall:
 - (1) annually inspect facilities of initial FEC applicants and licensed FECs, and issue annual licenses to or annually relicense FECs that satisfy the Department's licensure requirements as set forth in subsection (a);
 - (2) suspend, revoke, refuse to issue, or refuse to renew the license of any FEC, after notice and an opportunity for a hearing, when the Department finds that the FEC has failed to comply with the standards and requirements of the Act or rules adopted by the Department under the Act;
 - (3) issue an Emergency Suspension Order for any FEC when the Director or his or her designee has determined that the continued operation of the FEC poses an immediate and serious danger to the public health, safety, and welfare. An opportunity for a hearing shall be promptly

initiated after an Emergency Suspension Order has been issued; and

(4) adopt rules as needed to implement this Section. (Source: P.A. 96-23, eff. 6-30-09; 96-31, eff. 6-30-09; 96-883, eff. 3-1-10; 96-1000, eff. 7-2-10; 97-333, eff. 8-12-11.)

Section 99. Effective date. This Act takes effect upon becoming law.

Effective Date: 8/27/2012

Service	Proposed GSF	State Standard	Difference	Met Standard
Emergency	5,613	5,400	+213	No
Laboratory	184	None	N/A	N/A
Diagnostic	1,138	4,000	-2,862	Yes
Imaging				
EKG	108	None	N/A	N/A

Emergency

The proposed project calls for the establishment of a six bay Emergency Center. Based on the State Standard, six bays justify 5,400 GSF. The proposed project calls for 5,613 GSF which exceeds the State Standard by only 213 GSF. The reasons for this discrepancy are due to the proposed project being a Freestanding Emergency Center rather than a hospital-based ED. A Freestanding Emergency Center is mandated by the Act to have a major procedure room (438 square feet). (See appended licensure regulations.) The requirement for a major procedure room by itself justifies the difference between the hospital-based State Standard and the Freestanding Emergency Center proposal. It is also important to note that in a freestanding center, support services, such as medical records or waiting areas, are not shared with other department which also causes the square footage to be higher than in a hospital-based ED. When the preceding facts are considered, the square footage proposed is needed.

Laboratory

The proposed laboratory is a "stat lab" which is also required by the Licensing Program for Freestanding Emergency Centers. The proposed square footage for the laboratory is the minimum size necessary to meet licensure requirements.

Diagnostic Imaging

The proposed project calls for the construction of three imaging rooms in this department: the first is a general X-ray unit with digital imaging capability; the second is an ultrasound room; and the third is a CT room. The three imaging rooms proposed provide the minimum equipment needs of an Emergency Department. A notable difference between a freestanding emergency facility and a hospital-based emergency facility is that this imaging equipment is not located in the Diagnostic Imaging Department down the corridor of the hospital where it can be shared by inpatients and outpatients, but rather the diagnostic imaging services are located immediately adjacent to the ED. The State standards for space are met by the applicant's proposal.

SIZE OF PROJECT

EKG

The EKG department in the proposed facility consists of 1 room and 108 GSF. The proposed space is the minimum amount of space necessary to house this department. There is no State Standard for this department; however, one room is the minimum necessary to support an Emergency Center.

Joint Committee on Administrative Rules

ADMINISTRATIVE CODE

TITLE 77: PUBLIC HEALTH **CHAPTER I: DEPARTMENT OF PUBLIC HEALTH** SUBCHAPTER f: EMERGENCY SERVICES AND HIGHWAY SAFETY PART 518 FREESTANDING EMERGENCY CENTER CODE **SECTION 518.2240 BUILDING REQUIREMENTS**

Section 518.2240 Building Requirements

Location a)

> The freestanding emergency center shall be conveniently accessible to the population served. In selecting location, consideration shall be given to factors affecting source and quantity of patient load, including highway systems, public transportation, industrial plants, and recreational areas.

- b) **Parking**
 - One parking space for each staff member on duty at any one time and no fewer than two spaces for each major procedure room and each observation/treatment room shall be provided. Handicapped parking spaces shall be provided as required in the Illinois Accessibility Code. Additional spaces shall be provided for emergency vehicles. Street, public, and shared lot spaces shall be exclusive for the use of the emergency facility. All required parking spaces shall be conveniently located to the emergency entrance.
- Administration and Public Areas c)
 - The ambulance and walk-in entrance shall be located at grade level and be 1) able to accommodate wheelchairs.
 - All entrances shall be covered to permit protected transfer of patients A) from ambulances, and a ramp for wheelchairs and stretchers shall be provided in addition to steps. Doors to emergency services shall be not less than 4 feet wide.
 - B) The emergency entrance shall have vision panels to minimize conflict between incoming and outgoing traffic and to allow for observation of the unloading area from the control station.
 - A lobby and waiting area shall be provided and shall provide: 2)
 - A) Convenient access to wheelchairs and stretchers:
 - A control station that may be used for triage functions, is in direct B) communication with medical staff and has direct visual control of the

ATPACH MENT # 14

- emergency entrance, observation of arriving vehicles, and access to treatment and lobby areas;
- C) Waiting areas convenient to the reception and interview areas;
- Public toilet facilities for males, females and/or families. Unisex D) toilet facilities are prohibited.
- Facilities for conducting interviews with patients and others shall be 3) provided and shall include provisions for acoustical and visual privacy.
- General and individual offices shall be provided. 4)
- 5) Clerical spaces shall be provided.
- 6) Multipurpose rooms for staff conferences and consultation shall be provided.
- Equipment and general storage areas shall be provided. 7)

d) Clinical Facilities

- 1) At least one major procedure room shall be provided and shall meet the following requirements:
 - A) A minimum clear area of 360 square feet exclusive of cabinets, shelves, door swings and fixed obstructions;
 - A minimum clear dimension of 16 feet; B)
 - Emergency communication equipment connected to the nurses' C) control station;
 - X-ray film illuminator (as necessary); D)
 - Mechanical and electrical systems and devices that meet E) requirements for hospital surgical rooms in the Hospital Licensing Requirements (77 Ill. Adm. Code 250).
- 2) Where additional procedure rooms are set up for multi-patient use, these rooms shall meet the following requirements:
 - A minimum clear area of not less than 180 square feet per patient A) stretcher or bed;
 - B) A minimum clear dimension of 10 feet per space;
 - Emergency communication equipment connected to the nurses' C) control station;

- D) X-ray film illuminator (as necessary);
- E) Mechanical and electrical devices that meet requirements for hospital surgical rooms in 77 Ill. Adm. Code 250.
- 3) A holding area for stretchers and wheelchairs within the clinical area shall be provided and under staff control and located so as not to block means of egress.
- A poison control service shall be provided that contains the following 4) services:
 - A) Immediately accessible antidotes;
 - B) A file of information concerning common poisons; and
 - C) Communications links with regional and national poison centers and regional EMS centers.
- 5) A nurses' work and control station shall be located to permit visual control and access to clinical areas and shall contain space and equipment to allow the following services to be provided:
 - A) Charting;
 - Storage of files; B)
 - Staff consultation; and C)
 - D) Communication link with examination/treatment, lobby and waiting area control, laboratory, radiology and on-call staff.
- A cardiopulmonary resuscitation (CPR) emergency cart shall be located 6) away from traffic and available to all areas.
- Scrub stations shall be provided at each trauma/cardiac room with water and 7) soap controls operable without the use of hands.
- Radiology e)
 - Facilities for basic diagnostic radiological procedures shall be provided and 1) shall include the following:
 - A) Space adequate to accommodate needed equipment with a minimum clearance of 3 feet on all four sides of the table;
 - A shielded control alcove with windows providing a full view of the B) examination table and the patient; and
 - A patient toilet accessible from the radiology room. C)

- 2) Film processing facilities shall be provided (if required).
- 3) Viewing and administrative areas shall be provided.
- 4) Storage facilities for exposed film shall be provided (if required).
- 5) Dressing rooms or booths with convenient toilet access shall be provided.

f) Laboratory

- 1) Laboratory facilities shall be provided for the performance of tests in hematology, clinical chemistry, urinalysis, microbiology, anatomic pathology and cytology to meet the work load.
- 2) Laboratory facilities shall provide for the following procedures to be performed on-site: blood counts, urinalysis, blood glucose, electrolytes, blood urea and nitrogen (BUN), coagulation, and transfusions (type capability). If transport time by an ambulance to the nearest hospital is 10 minutes or less, plasma expanders may be used. If transport time by ambulance to the nearest hospital is greater than 10 minutes, then type O negative blood shall be available for transfusion. Facilities shall also be included for specimen collection and processing.
- 3) The following shall be provided in the laboratory suite:
 - A) Work counters with space for items such as microscopes, chemical analyzers, incubators and centrifuges; work counters shall include sinks and provisions for fluid disposal, eye washes, vacuum, gases, electrical services and piped-in air;
 - B) Hand-washing lavatories operable without the use of hands at strategic locations for convenience of use;
 - C) Storage facilities;
 - D) Chemical safety provisions, including emergency showers, eyeflushing devices and blankets; floor drains at the emergency shower locations;
 - E) Flammable liquid storage in the form of vented cabinets designed for use with flammable liquids;
 - F) Specimen collection facilities including: blood collection area with work counter; space for patient seating and hand washing; a urine and feces collection room equipped with water and lavatory;
 - G) A terminal sterilization facility for contaminated specimens (autoclave or electric oven), unless contaminated waste is disposed of through a licensed waste management service in accordance with Section 518.2150(f)(4); and

-264-

ATTACH MENT #14

- H) If radioactive materials are employed, facilities for long-term storage and disposal of these materials, appropriately shielded to prevent exposure.
- g) Staff locker rooms and toilets shall be provided.
- h) At least one housekeeping room per floor shall be provided. The housekeeping room shall contain a service sink and storage for housekeeping supplies and equipment and shall be located within the FEC.
- i) Utility Rooms
 - 1) A clean utility room shall be provided and contain the following:
 - A) Storage for clean and sterile supplies and equipment;
 - B) Work counters;
 - C) Hand-washing sinks operable without the use of hands;
 - D) Ice maker;
 - E) Under-counter refrigerator; and
 - F) Communications equipment.
 - 2) A soiled utility room shall be provided and contain the following:
 - A) Storage for soiled supplies and equipment;
 - B) Work counters;
 - C) Hands-free hand-washing sinks;
 - D) Communications equipment; and
 - E) Clinical service sink.
- j) Sterile supply and processing rooms shall be provided and may be combined with the clean and soiled utility rooms if the program narrative is approved.
 - 1) One-way flow shall be maintained between the soiled supplies, clean-up, sterilizing, and storage functions.
 - Storage spaces for clean and sterile supplies and equipment shall be provided.
 - 3) Storage spaces for soiled supplies and equipment shall be provided.
 - 4) There shall be no direct access between the soiled and clean sides of sterile supply and processing.

ATTACHMENT #14-265

- 5) Work counters and hand-washing sinks operable without the use of hands shall be provided.
- 6) A clinical service sink shall be provided on the soiled side.
- 7) The soiled side shall have equipment for cleaning, such as ultrasound, washers, and deep three-compartment sink and tray assembly.
- 8) A pass-through sterilizer shall be provided.
- Space shall be provided in the soiled side for processing equipment and tray assembly, such as steris machines, dryers, tube racks, wrapping and labelling counters. The steris machine shall be located in a clean utility room. Only tray loading is permitted in the soiled side.
- k) A nourishment room for the use of patients, conveniently located to the clinical area, shall contain the following:
 - 1) Work counter;
 - Refrigerator;
 - Ice maker;
 - 4) Hands-free hand-washing sink; and
 - 5) Storage for supplies.
- 1) Facilities shall be provided for observing patients until they can be transferred to an appropriate hospital. The size and type of equipment shall be what is required for anticipated patient load and lengths of stay. Each observation bed shall provide for:
 - 1) Direct visual observation of each patient from the nurses' station;
 - Patient privacy;
 - 3) Access to patient toilets;
 - 4) Secure storage of patients' belongings;
 - Medication dispensing;
 - 6) Bedpan storage and cleaning;
 - 7) Hand-washing facilities without the use of hands;
 - 8) Communications system with nurses station; and
 - 9) Monitoring capabilities.

-266-ATTACHMENT#14

- m) A consultation/communications room shall be located within access of the diagnostic and treatment facilities and shall provide sound isolated for privacy and confidentiality of consultation for the use of the staff during the tele-medicine consultation. The room shall contain the following:
 - Computer support and telecommunications support equipment necessary for the consultation task;
 - 2) View screens;
 - 3) Work counters;
 - 4) Storage areas; and
 - 5) Additional refrigeration units as required by equipment.

(Source: Amended at 33 Ill. Reg. 8317, effective June 4, 2009)

PROJECT SERVICES UTILIZATION

		(四位是位置)(1)(1)(1)(1)(1)(1)(1)(1)(1)(1)(1)(1)(1)	
Historical Utilization	Projected Utilization	State Standard	Met Standard?
N/A	9,413	2,000/Rm	No
	10,075		Yes
N/A	2,533	7,000/Rm	No
	2,700		No
N/A	5,312	8,000/Rm	No
	5,655		No
N/A	993	3,100/RM	No
,	1,054		No
	N/A		

Year 1 is 2014 and Year 2 is 2015. These are the first two full years of operation after project completion.

Emergency Center

While the State Agency does not currently have utilization standards for a freestanding emergency center, the standard for a hospital-based ED was used for comparison purposes. Based upon that comparison, the applicant's projected workload in 2015 would support the need for 5.1 or 6 rooms in the emergency center. The applicant's projections are based upon conservative projections for utilization and are similar to the projections for other Freestanding Emergency Centers previously approved by the Board. It is important to note that in our conversations with these previous applicant's, these applicant's have met and exceeded their projections and the centers are being well utilized.

Note: The utilization projections for the following pieces of equipment are based upon the historical experience of the utilization by the emergency department at Riverside Medical Center with adjustments made for the projected patient mix at the new emergency center.

The volume for diagnostic equipment in a hospital-based setting will be much higher than in the free-standing setting due to its concurrent use by inpatients of the hospital and by higher acuity patients treated in the hospital-based ED.

PROJECT SERVICES UTILIZATION

CT Scanner

The applicant is planning to have one CT scanner in the proposed center. This unit will also be used by the physicians offices located in the contiguous medical office building. While this unit does not reach the optimum utilization within the first 2 years of operation, it is an essential piece of equipment in the diagnosis and treatment of emergency patients. It is not medically advisable to operate an Emergency Center without CT equipment.

General X-ray Unit

The applicant is planning to have one digital X-ray unit in the proposed center. This X-ray unit will also be used by the physicians' offices located in the contiguous medical office building. Though this unit does not reach the optimum utilization within the first 2 years of operation, it is an essential piece of equipment in the diagnosis and treatment of emergency patients. It is impossible to operate an Emergency Center without this essential and basic piece of diagnostic equipment.

Ultrasound

The applicant is planning to have one ultrasound unit in the proposed center. This unit will also be used by the physicians' offices located in the contiguous medical office building. This unit does not reach the optimum utilization within the first 2 years of operation, yet it too is an essential piece of equipment in the diagnosis and treatment of emergency patients. Ultrasound equipment has become state-of-the-art equipment in the diagnosis of many different emergency situations and is instrumental in assisting physicians with emergency procedures and life-saving placement of needles, catheters, and IV lines for emergency treatment. It is virtually impossible to operate an Emergency Center today without this very basic piece of equipment.

Criterion 1110.3230 – ESTABLISHMENT OF FREESTANDING EMERGENCY CENTER (MEDICAL SERVICES

The average daily and annual visit volume projected for the proposed Freestanding Emergency Center is shown in the following table:

Year	Average Number of Patients per Day	Total Number of Patients Annually
2014	25.8	9,413
2015	27.6	10,075
2016	28.2	10,275
2017	28.9	10,561

These projections were made as a result of a market study conducted to determine the need and feasibility of establishing a Freestanding Emergency Center in the proposed target area. The study was completed by 3d Health Consultants, Chicago Illinois, an independent health care consulting group. In addition, a focus group was conducted by Riverside to understand the needs of residents in the area.

The formal market study conducted by 3d Health was an independent study that used information from Claritas, COMPdata, Illinois Department of Public Health information, and census information. The study considered population growth, age of residents, impact of health reform initiatives, and potential redirection of patients from Riverside Medical Center's emergency department. The study verified that that the demand for emergency services is increasing and that the area could fully support the proposed project within 2 years of opening. [Attachment 38(a)]

The proposed Freestanding Emergency Center will be located in the southern portion of Frankfort, Illinois in Will County. The population of Frankfort is 32,274, according to the latest census data.

The proposed Freestanding Emergency Center will be owned and operated by Riverside Medical Center. Riverside Medical Center is 24.81 miles from the proposed site and 35 minutes travel time from the site.

The Resource Hospital for the proposed facility is Silver Cross Hospital which is located 10.39 miles and 17 minutes travel time from the proposed site.

The letter certifying that the representatives of the applicant entity have reviewed and will comply with the cited requirements is appended. [Attachment 38(b)]

Criterion 1110.3230 – ESTABLISHMENT OF FREESTANDING EMERGENCY CENTER (MEDICAL SERVICES

A map of the proposed service area is appended to this attachment. This service area was developed by identifying the location of the other emergency room services within 30 minutes travel time of the proposed center. The applicant then determined those areas and zip codes with the greatest need for closer proximity to emergency department services. The residents to the North and West of the planning area have better access to emergency services than the residents in areas to the south and east of the proposed site. Interstate 57 was determined to be the primary geographic feature in the proposed service area and was therefore used as a major focus when determining access to services by the residents in the area. [Attachment 38(c)]

The projected patient volume by zip code is appended to this attachment. The volume projections are based upon generating approximately 90% of the patient volume from residents within the proposed service area. Other patients from adjacent areas may utilize the facility, but they are not a part of the project projected utilization. [Attachment 38(d)]

The current ED visits by zip code and facility is appended to this attachment in a table titled Outpatient ED Visits. The sources for the information in this document are IHA COMPdata for ED visit utilization data and Claritis for the population data. The zip code data clearly shows that more than 50 % of the projected volume for the proposed facility comes from within the Target Service area. [Attachment 38(e)]

The historical ED visit volume for the existing facilities within 30 minutes travel time of the proposed new facility is also appended to this attachment under the heading: Frankfort Service Area Facility ED Visits. The source of that information is IHA COMPdata. [Attachment 38(f)]

The projected volume for year one of operation (2014) totals 9,413 visits. The projected volume for year two of operation (2015) totals 10,075 visits. These ED visit projections are based primarily on three factors: first, the patients now seen at Riverside Medical Center that would be appropriate for care at the new free-standing site; second, the outmigration of patients from the service area for service, and third, the travel times of residents to the closest facility. [Attachment 38(g)]

The proposed project could have an impact on the other area providers by offering ED services to patients in a facility that is closer and has less driving time from their residence. This impact however, is projected to be minimal on any one facility, and the project will have substantial benefits to the residents of the area.

The existing ED facilities are not operating at the 2,000 visits per room standard used by the State Board. However, all of the hospital based programs are experiencing more than 40,000 visits per year in their emergency departments with the exception of St. James Olympia Fields, which had 34,026 patient visits in 2010. The applicant's projected volume of 10,075 visits will have minimal impact on the volumes at the existing hospitals. The experience of recently approved Freestanding Emergency Centers supports the need

Criterion 1110.3230 – ESTABLISHMENT OF FREESTANDING EMERGENCY CENTER (MEDICAL SERVICES

for this type of service in that those Freestanding Centers have achieved high utilization levels, beyond what they expected within the first two years of operation.

The population of this service area is sufficient to support the proposed facility at the required target utilization level.

Historical ED visit volumes for the facilities within 30 minutes of the proposed site have continued to grow with two exceptions. St. James Olympia Fields saw a slight decrease in utilization from 2010 to 2011, but the first two quarters of 2012 indicate that volume is returning to previous levels. Silver Cross Hospital's volume decreased slightly in 2011 when they opened their own free-standing emergency center in Homer Glen which is closer to Joliet than the hospital. Silver Cross Hospital's ED visit volume has increased during the first two quarters of 2012 (source: IHA COMPdata information.)

The only hospital that may experience a decrease in volume when the proposed new facility opens is Riverside Medical Center. This is due to the fact that patients who are appropriate for care and are closer to the proposed free-standing emergency center will likely either go to or be referred from Riverside Medical Center to the proposed site.

The staff for the proposed Freestanding Emergency Center will be recruited through Riverside Medical Center. The existing ED at Riverside Medical Center does not have any staffing deficiencies in any positions need to provide ED services. The applicant is currently in discussions with two groups of Emergency Room physician partners to determine which group will provide the physician services for the proposed facility. Both physician groups have indicated a willingness to provide services to the proposed facility. Therefore, it appears that sufficient staff is available to adequate staff the facility.

Service Area

In order to project visit volumes for the proposed Frankfort Freestanding Emergency Department ("ED"), as a first step 3d Health worked with Riverside Medical Center to establish a reasonable service area for the proposed facility. The agreed upon service area includes the 10 ZIP codes south of I-80 that are within a 20-minute drive time of the proposed location.

Market Projections

3d Health used the defined service area to develop market-based projections for total ED visits expected from the population residing in these 10 ZIP codes (regardless of eventual destination hospital/facility for care). The market-based projections were developed as follows:

Baseline Use Rates

- 3d Health used Illinois COMPdata from calendar year 2011 to establish a baseline set of data on the number of ED visits by age, gender, and payer category for the service area.
- COMPdata does not track the facility levels assigned to ED visits across all facilities in the database (i.e. Levels 1 through 5 and Critical Care visits). As such, 3d Health used a combination of blinded client data, national ED visit sample data from the National Center for Health Statistics ("NCHS"), as well as select Illinois data from COMPdata where facility visit levels were reported, to estimate the number of visits by level in the baseline 2011 data.
- These actual historical visits (after adjusting for facility level) were then converted into utilization rates by age, gender, payer, and facility level by applying 2011 population estimates by cohort to the visit data.

Use Rate Adjustments

 In order to project forward and account for changes to the underlying utilization rates, 3d Health evaluated the historic change in use rates from COMPdata from 2009 through 2011 by age, gender, and payer. This historic rate of change in utilization rate per population was then applied to the baseline use rates to model future utilization from 2012 through 2017 (see Table 1.) Initially, expected utilization changes reduce the incremental number of visits in the market, but as the population ages and grows in size, volume increases to almost 1,300 additional visits due to changes in use rates.

Table 1. Incremental Market Visit Impact of Expected Utilization Changes

1		Projec	ted)			% Change.	6000
2012	2013	2014	2015	2016	2017	2012-2017	CAGR

Population Projections

- Once the final set of use rates by age, gender, payer, and facility visit level was
 established, 3d Health applied these use rates to population forecasts by cohort from
 Claritas and Truven Health for the years 2012 through 2017.
- Based on Claritas projections, the overall population in the service area is expected to increase by 1.5% on an annual basis from 2012 through 2017 (see Table 2.) This is almost twice the current national average of 0.8% annual growth. The population is forecast to increase the most in the towns of Frankfort (3,587 new residents) and New Lenox (3,267 new residents).

Table 2. Service Area Population Projections

			Projec	eted			% Change,	
Payer	2012	2013	2014	2015	2016	2017	2012-2017	CAGR
Frankfort	32,277	32,922	33,601	34,316	35,067	35,864	11.1%	2.1%

Peotone	6,152	6,225	6,300	6,382	6,467	6,562	6.7%	1.3%
Richton Park	13,529	13,598	13,675	13,768	13,854	13,958	3.2%	0.6%
Total	188,915	191,593	194,434	197,464	200,677	204,094	8.0%	

Given this rapid population growth, the incremental impact on expected ED visits from
population growth and aging is quite substantial. Across the total service area, the
number of ED visits is forecast to increase by almost 8,000 visits on an annual basis by
2017 based on forecast population changes alone.

Table 3. Incremental Market Visit Impact from Forecast Population Changes

In addition, upon implementation of health reform, Truven Health forecasts an increase
in the number of service area residents that enroll in Medicaid and private insurance
through health insurance exchanges that are currently uninsured. Since insured
patients – particularly those covered by Medicaid – visit the emergency department
more frequently than the uninsured, there is an incremental increase in visits in the
market as a result of this shift in coverage (see Tables 3 and 4.)

- 3d Health further refined the market visits by applying an adjustment factor to exclude visits that would be inappropriate for treatment in a freestanding setting. These factors were developed through an analysis of ED visit data by diagnosis from 3d Health clients, the NCHS sample data, and by visits to Illinois freestanding EDs.
- Upon the conclusion of this analysis, 3d Health had a database of historic and future expected ED visits by age, gender, payer, and facility visit level for each ZIP code in the proposed service area that would be appropriate for a freestanding ED setting of care.

Frankfort Freestanding Emergency Department Visit Projection Methodology

Projections Specific to the Proposed Frankfort Facility

Upon completion of the market visit projections, 3d Health worked with Riverside Medical Center to estimate likely capture rates ("market share") at the proposed facility for ED visits. These estimates were made specific to each of the 10 ZIP codes in the service area.

Each ZIP code was evaluated across several criteria when developing the visit projections for the proposed facility:

- Baseline Shift in Visits
 - Based on the location of the proposed facility, some level of existing ED visit volume from other facilities would likely seek care at the new location as opposed to driving to a more distant ED
- Capture of Incremental Growth
 - Within the market, ED visit volume is projected to increase in the aggregate based on the population changes (both in size and age distribution) and the implementation of health reform
 - Riverside made estimates by ZIP code of how much of this incremental new visit volume in the service area would seek care at the proposed facility
- Cannibalization of Existing Riverside Medical Center Visits
 - Riverside Medical Center currently provides ED services to a number of patients in the service area and given the closer proximity of the proposed location to many of these patients, Riverside made assumptions relative to how many of these existing patients would choose to go to the proposed facility in Frankfort rather than continue to come to the main Riverside campus in Kankakee for care

Since the proposed Frankfort facility projections were market-based and focus on a defined geography, 3d Health also built in an additional adjustment to account for inmigration volume to the facility.

For emergency services, inmigrating patients may live far away from the facility but could have a condition or issue that would cause them to present at the proposed freestanding ED while they are passing through the area or visiting residents of the service area.

3d Health made an assumption that 90% of the visits at the proposed Frankfort facility are for residents of the service area and that the remaining 10% of visits would be for these patients that live in other areas.

November 1, 2012

Ms. Courtney R. Avery Administrator Illinois Health Facilities and Services Review Board 525 West Jefferson Street, 2nd Floor Springfield, IL 62761

Re: Riverside Emergency Center

Dear Ms. Avery:

As authorized representatives of Riverside Medical center, the applicant for the CON permit to establish Riverside Emergency Center, we hereby certify that we have reviewed, understand, and intend to comply with all of the following requirements identified in 77 III. Adm. Code 1110.3230.a)6) as we apply for a certificate of need (CON) application to establish a Freestanding Emergency Center.

We will comply with the requirements of becoming a Medicare provider of freestanding emergency services.

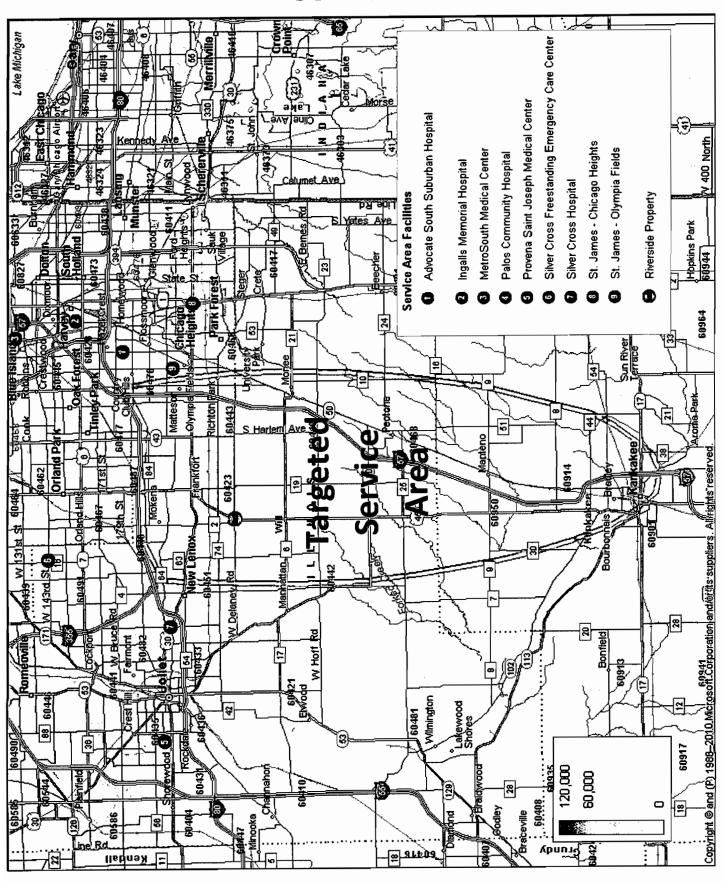

We will comply with the requirements of becoming licensed under the Emergency Medical Services Systems Act (210 ILCS 50/32.5).

We hereby certify that the representations contained in this letter are true and correct.

Sincerely,

Phillip M. Kambic President & CEO Margaret Frogge, RN Senior Vice President

Phil Kambic, President and CEO Riverside Medical Center 350 North Wall Street Kankakee, IL 60901

Dear Mr. Kambic:

I am very pleased to learn that Riverside Medical Center is planning to open services in the Frankfort area including a freestanding emergency department, diagnostic medical services and physician offices.

An emergency can be defined in many ways for many different people. An emergency can happen in a moment, but gaining access to emergency care often requires lengthy travel times on congested roads to areas outside our community. The convenient access to quality emergency care and life-saving services as well as laboratory, imaging and additional providers will be of great benefit to the residents of the surrounding communities.

The services provided by Riverside in this location will help bring emergency care and peace of mind to a community in which a 25 minute travel time is currently the minimum required to access existing resources.

Riverside's reputation of award-winning care and excellent quality services is well-known. We thank you for caring for our communities and are looking forward to welcoming you to the Frankfort community and to beginning this new relationship.

Sincerely,

Lisa M. Dugan

Dear Mr. Kambic,

I am very pleased to learn that Riverside Medical Center is planning to open services in the Frankfort area including a freestanding emergency department, diagnostic medical services and physician offices.

The Village of Manteno is always in support of a project that will provide professional convenient health coverage for our citizens. The access to quality emergency care and life-saving services as well as laboratory, imaging and additional providers will be of great benefit. For many residents, like me, the Riverside North Campus at Frankfort will be an important and most welcome addition to our area.

We look forward to welcoming you to the Frankfort area.

Sincerely,

Thath O. huged Timothy O. Nugent

Dear Mr. Kambic,

As Illinois State Representative of the 81st Legislative District, I am pleased to learn that Riverside Medical Center is planning to open services in the Frankfort area, which will include a free-standing emergency department, diagnostic medical services and physician offices.

The convenient access to quality emergency care and life-saving services as well as laboratory, imaging and additional providers will be of great benefit to the residents of Frankfort and the surrounding communities. For the many residents in this area, the Riverside North Campus will be an important and most welcome addition to our area.

The Frankfort community and I look forward to welcoming Riverside to the area.

Sincerely,

Renée Kosel

Illinois State Representative

Assistant House Republican Leader

FRANKFORT

October 2, 2012

Phil Kambic, President and CEO Riverside Medical Center 350 North Wall Street Kankakee, IL 60901

Dear Mr. Kambic,

It is with pleasure that I write a letter of support for Riverside Medical Center's plans to create Frankfort area services which will include a freestanding emergency department, diagnostic medical services and physician offices.

Particularly appealing to the people of Frankfort are the plans for 24 hour, 365 days/year emergency care. Currently, our residents must seek a far away hospital emergency room for any after-hour medical issues. Many families of our thousands of young athletes make the minimum 20 to 30 minute trip to a major hospital trauma center for after-hour relatively minor sprains, scrapes and bruises just to make sure there is nothing serious. Our state's medical system would be better served if they could be treated in a local emergency room. I worry that some of our adults who feel chest pains or dizziness or other puzzling symptoms wait to get medical care because weekend or night time services are just too far away. Convenient access to quality emergency care and life-saving services as well as laboratory, imaging and additional providers will benefit the residents of this entire area. The Riverside North Campus at Frankfort will be an important and most welcome addition to our area.

We look forward to welcoming you to the Frankfort area.

Sincerely,

Jim Holland

Mayor

October 29, 2012

Phil Kambic, President and CEO Riverside Medical Center 350 North Wall Street Kankakee, IL 60901

Dear Mr. Kambic,

I am very pleased to learn that Riverside Medical Center is planning to open services in the Frankfort area including a freestanding 24 hour emergency department with comprehensive laboratory and radiologic diagnostic services.

As a Frankfort resident for 8 years, a father of two children, and a relative of aging family members with progressive medical illness, I am acutely aware of the need for rapid access to local emergency care. On several occasions my children and relatives have needed emergency treatment, and although I have worked at numerous south-suburban hospitals (St. James, Advocate South Suburban, and Palos Community Hospital), I have brought them a greater distance to Riverside Medical Center to receive care. I have always been confident with the quality of emergency care provided at Riverside Medical Center.

I have been fortunate that my family have not been critically ill or injured in an emergency situation requiring ambulance transport, but if they are I want them to be brought to a place where I feel confident that they will get the best care. The Riverside North Campus at Frankfort will meet the need for reliable care and convenient access to quality emergency care for both my family and my community.

I am happy to discuss this with you at length, and furthermore would like to offer any assistance that I can to help make the plans for Riverside North Campus a reality.

Sincerely,

Scott C. Smithgall, D.O.

Riverside Medical Center is planning to open a Freestanding Emergency Center at our Riverside North Campus in Frankfort. The purpose of this project is to provide care to patients in the surrounding communities, particularly to the south, who currently need to travel an extended distance to receive treatment.

The Health Facilities Planning Board requires that we ask you to identify any anticipated impact that the proposed project would have on your hospital's emergency department.

Please provide Riverside a written response within 15 days upon receipt of this letter. If there is no response, we will assume that there is not an impact from the proposed project.

Please feel free to contact Maggie Frogge, Senior Vice President of Corporate Strategy at 815-935-7060 should you have any questions.

Thank you for your consideration.

Re: Illinois Finance Authority (Riverside Health System)

Dear Mr. Douglas:

Standard & Poor's has reviewed the rating on the above-referenced obligations. After such review, we have affirmed the "A" rating and changed the outlook to positive from stable. A copy of the rationale supporting the rating and outlook is enclosed.

The rating is not investment, financial, or other advice and you should not and cannot rely upon the rating as such. The rating is based on information supplied to us by you or by your agents but does not represent an audit. We undertake no duty of due diligence or independent verification of any information. The assignment of a rating does not create a fiduciary relationship between us and you or between us and other recipients of the rating. We have not consented to and will not consent to being named an "expert" under the applicable securities laws, including without limitation, Section 7 of the Securities Act of 1933. The rating is not a "market rating" nor is it a recommendation to buy, hold, or sell the obligations.

This letter constitutes Standard & Poor's permission to you to disseminate the above-assigned rating to interested parties. Standard & Poor's reserves the right to inform its own clients, subscribers, and the public of the rating.

Standard & Poor's relies on the issuer/obligor and its counsel, accountants, and other experts for the accuracy and completeness of the information submitted in connection with the rating. To maintain the rating, Standard & Poor's must receive all relevant financial information as soon as such information is available. Placing us on a distribution list for this information would facilitate the process. You must promptly notify us of all material changes in the financial information and the documents. Standard & Poor's may change, suspend, withdraw, or place on CreditWatch the rating as a result of changes in, or unavailability of, such information. Standard & Poor's reserves the right to request additional information if necessary to maintain the rating.

Please send all information to:

Standard & Poor's Ratings Services Public Finance Department 55 Water Street New York, NY 10041-0003

If you have any questions, or if we can be of help in any other way, please feel free to call or contact us at nypublicfinance@standardandpoors.com. For more information on Standard & Poor's, please visit our website at nww.standardandpoors.com. We appreciate the opportunity to work with you and we look forward to working with you again

Sincerely yours,

Standard & Poor's Ratings Services

STANDARD &POOR'S RATINGS SERVICES

Standard & Poor's Ratings Services Terms and Conditions Applicable To Public Finance Ratings

You understand and agree that:

General. The ratings and other views of Standard & Poor's Ratings Services ("Ratings Services") are statements of opinion and not statements of fact. A rating is not a recommendation to purchase, hold, or sell any securities nor does it comment on market price, marketability, investor preference or suitability of any security. While Ratings Services bases its ratings and other views on information provided by issuers and their agents and advisors, and other information from sources it believes to be reliable, Ratings Services does not perform an audit, and undertakes no duty of due diligence or independent verification, of any information it receives. Such information and Ratings Services' opinions should not be relied upon in making any investment decision. Ratings Services does not act as a "fiduciary" or an investment advisor. Ratings Services neither recommends nor will recommend how an issuer can or should achieve a particular rating outcome nor provides or will provide consulting, advisory, financial or structuring advice.

All Rating Actions in Ratings Services' Sole Discretion. Ratings Services may assign, raise, lower, suspend, place on CreditWatch, or withdraw a rating, and assign or revise an Outlook, at any time, in Ratings Services' sole discretion. Ratings Services may take any of the foregoing actions notwithstanding any request for a confidential or private rating or a withdrawal of a rating, or termination of this Agreement. Ratings Services will not convert a public rating to a confidential or private rating, or a private rating to a confidential rating.

<u>Publication</u>. Ratings Services reserves the right to use, publish, disseminate, or license others to use, publish or disseminate the rating provided hereunder and any analytical reports, including the rationale for the rating, unless you specifically request in connection with the initial rating that the rating be assigned and maintained on a confidential or private basis. If, however, a confidential or private rating or the existence of a confidential or private rating subsequently becomes public through disclosure other than by an act of Ratings Services or its affiliates, Ratings Services reserves the right to treat the rating as a public rating, including, without limitation, publishing the rating and any related analytical reports. Any analytical reports published by Ratings Services are not issued by or on behalf of you or at your request. Notwithstanding anything to the contrary herein, Ratings Services reserves the right to use, publish, disseminate or license others to use, publish or disseminate analytical reports with respect to public ratings that have been withdrawn, regardless of the reason for such withdrawal. Ratings Services may publish explanations of Ratings Services' ratings criteria from time to time and nothing in this Agreement shall be construed as limiting Ratings Services' ability to modify or refine its ratings criteria at any time as Ratings Services deems appropriate.

Information to be Provided by You. For so long as this Agreement is in effect, in connection with the rating provided hereunder, you warrant that you will provide, or cause to be provided, as promptly as practicable, to Ratings Services all information requested by Ratings Services in accordance with its applicable published ratings criteria. The rating, and the maintenance of the rating, may be affected by Ratings Services' opinion of the information received from you or your agents or advisors. You further warrant that all information provided to Ratings Services by you or your agents or advisors regarding the rating or, if applicable, surveillance of the rating, as of the date such information is provided, (i) is true, accurate and complete in all material respects and, in light of the circumstances in which it was provided, not misleading and (ii) does not infringe or violate the intellectual property rights of a third party. A material breach of the warranties in this paragraph shall constitute a material breach of this Agreement.

<u>Confidential Information</u>. For purposes of this Agreement, "Confidential Information" shall mean verbal or written information that you or your agents or advisors have provided to Ratings Services and, in a specific and particularized manner, have marked or otherwise indicated in writing (either prior to or promptly following such disclosure) that such information is "Confidential". Notwithstanding the foregoing, information disclosed by you or your agents or advisors to Ratings Services shall not be deemed to be Confidential Information, and Ratings Services shall have no obligation to treat such information as Confidential Information, if such information (i) was known by Ratings Services or its affiliates at the

time of such disclosure and was not known by Ratings Services to be subject to a prohibition on disclosure, (ii) was known to the public at the time of such disclosure, (iii) becomes known to the public (other than by an act of Ratings Services or its affiliates) subsequent to such disclosure, (iv) is disclosed to Ratings Services or its affiliates by a third party subsequent to such disclosure and Ratings Services reasonably believes that such third party's disclosure to Ratings Services or its affiliates was not prohibited, (v) is developed independently by Ratings Services or its affiliates without reference to the Confidential Information, (vi) is approved in writing by you for public disclosure, or (vii) is required by law or regulation to be disclosed by Ratings Services or its affiliates. Ratings Services is aware that U.S. and state securities laws may impose restrictions on trading in securities when in possession of material, non-public information and has adopted securities trading and communication policies to that effect.

Ratings Services' Use of Information. Except as otherwise provided herein, Ratings Services shall not disclose Confidential Information to third parties. Ratings Services may (i) use Confidential Information to assign, raise, lower, suspend, place on CreditWatch, or withdraw a rating, and assign or revise an Outlook, and (ii) share Confidential Information with its affiliates engaged in the ratings business who are bound by appropriate confidentiality obligations; in each case, subject to the restrictions contained herein, Ratings Services and such affiliates may publish information derived from Confidential Information. Ratings Services may also use, and share Confidential Information with any of its affiliates or agents engaged in the ratings or other financial services businesses who are bound by appropriate confidentiality obligations ("Relevant Affiliates and Agents"), for modelling, benchmarking and research purposes; in each case, subject to the restrictions contained herein, Ratings Services and such affiliates may publish information derived from Confidential Information. With respect to structured finance ratings not maintained on a confidential or private basis, Ratings Services may publish data aggregated from Confidential Information, excluding data that is specific to and identifies individual debtors ("Relevant Data"), and share such Confidential Information with any of its Relevant Affiliates and Agents for general market dissemination of Relevant Data; you confirm that, to the best of your knowledge, such publication would not breach any confidentiality obligations you may have toward third parties. Ratings Services will comply with all applicable U.S. and state laws, rules and regulations protecting personally-identifiable information and the privacy rights of individuals. Ratings Services acknowledges that you may be entitled to seek specific performance and injunctive or other equitable relief as a remedy for Ratings Services' disclosure of Confidential Information in violation of this Agreement. Ratings Services and its affiliates reserve the right to use, publish, disseminate, or license others to use, publish or disseminate any non-Confidential Information provided by you, your agents or advisors.

Ratings Services Not an Expert, Underwriter or Seller under Securities Laws. Ratings Services has not consented to and will not consent to being named an "expert" or any similar designation under any applicable securities laws or other regulatory guidance, rules or recommendations, including without limitation, Section 7 of the U.S. Securities Act of 1933. Ratings Services is not an "underwriter" or "seller" as those terms are defined under applicable securities laws or other regulatory guidance, rules or recommendations, including without limitation Sections 11 and 12(a)(2) of the U.S. Securities Act of 1933. Rating Services has not performed the role or tasks associated with an "underwriter" or "seller" under the United States federal securities laws or other regulatory guidance, rules or recommendations in connection with this engagement.

Office of Foreign Assets Control. As of the date of this Agreement, (a) neither you nor the issuer (if you are not the issuer) or any of your or the issuer's subsidiaries, or any director or corporate officer of any of the foregoing entities, is the subject of any U.S. sanctions administered by the Office of Foreign Assets Control of the U.S. Department of the Treasury ("OFAC Sanctions"), (b) neither you nor the issuer (if you are not the issuer) is 50% or more owned or controlled, directly or indirectly, by any person or entity ("parent") that is the subject of OFAC Sanctions, and (c) to the best of your knowledge, no entity 50% or more owned or controlled by a direct or indirect parent of you or the issuer (if you are not the issuer) is the subject of OFAC sanctions. For so long as this Agreement is in effect, you will promptly notify Ratings Services if any of these circumstances change.

Ratings Services' Use of Confidential and Private Ratings. Ratings Services may use confidential and private ratings in its analysis of the debt issued by collateralized debt obligation (CDO) and other investment vehicles. Ratings Services may disclose a confidential or private rating as a confidential credit estimate or assessment to the managers of CDO and similar investment vehicles. Ratings Services may permit CDO managers to use and disseminate credit estimates or assessments on a limited basis and subject to various restrictions; however, Ratings Services cannot control any such use or dissemination. Entire Agreement. Nothing in this Agreement shall prevent you, the issuer (if you are not the issuer) or Ratings Services from acting in accordance with applicable laws and regulations. Subject to the prior sentence, this Agreement, including any amendment made in accordance with the provisions hereof, constitutes the complete and entire agreement between the

parties on all matters regarding the rating provided hereunder. The terms of this Agreement supersede any other terms and conditions relating to information provided to Ratings Services by you or your agents and advisors hereunder, including without limitation, terms and conditions found on, or applicable to, websites or other means through which you or your agents and advisors make such information available to Ratings Services, regardless if such terms and conditions are entered into before or after the date of this Agreement. Such terms and conditions shall be null and void as to Ratings Services.

Limitation on Damages. Ratings Services does not and cannot guarantee the accuracy, completeness, or timeliness of the information relied on in connection with a rating or the results obtained from the use of such information, RATINGS SERVICES GIVES NO EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE. Ratings Services. its affiliates or third party providers, or any of their officers, directors, shareholders, employees or agents shall not be liable to you, your affiliates or any person asserting claims on your behalf, directly or indirectly, for any inaccuracies, errors, or omissions, in each case regardless of cause, actions, damages (consequential, special, indirect, incidental, punitive, compensatory, exemplary or otherwise), claims, liabilities, costs, expenses, legal fees or losses (including, without limitation, lost income or lost profits and opportunity costs) in any way arising out of or relating to the rating provided hereunder or the related analytic services even if advised of the possibility of such damages or other amounts except to the extent such damages or other amounts are finally determined by a court of competent jurisdiction in a proceeding in which you and Ratings Services are parties to result from gross negligence, intentional wrongdoing, or willful misconduct of In furtherance and not in limitation of the foregoing, Ratings Services will not be liable to you, your affiliates or any person asserting claims on your behalf in respect of any decisions alleged to be made by any person based on anything that may be perceived as advice or recommendations. In the event that Ratings Services is nevertheless held liable to you, your affiliates, or any person asserting claims on your behalf for monetary damages under this Agreement, in no event shall Ratings Services be liable in an aggregate amount in excess of US\$5,000,000 except to the extent such monetary damages directly result from Ratings Services' intentional wrongdoing or willful misconduct. The provisions of this paragraph shall apply regardless of the form of action, damage, claim, liability, cost, expense, or loss, whether in contract, statute, tort (including, without limitation, negligence), or otherwise. Neither party waives any protections, privileges, or defenses it may have under law, including but not limited to, the First Amendment of the Constitution of the United States of America.

<u>Termination of Agreement.</u> This Agreement may be terminated by either party at any time upon written notice to the other party. Except where expressly limited to the term of this Agreement, these Terms and Conditions shall survive the termination of this Agreement.

<u>No Third-Party Beneficiaries</u>. Nothing in this Agreement, or the rating when issued, is intended or should be construed as creating any rights on behalf of any third parties, including, without limitation, any recipient of the rating. No person is intended as a third party beneficiary of this Agreement or of the rating when issued.

Binding Effect. This Agreement shall be binding on, and inure to the benefit of, the parties hereto and their successors and assigns.

<u>Severability</u>. In the event that any term or provision of this Agreement shall be held to be invalid, void, or unenforceable, then the remainder of this Agreement shall not be affected, impaired, or invalidated, and each such term and provision shall be valid and enforceable to the fullest extent permitted by law.

<u>Amendments</u>. This Agreement may not be amended or superseded except by a writing that specifically refers to this Agreement and is executed manually or electronically by authorized representatives of both parties.

Reservation of Rights. The parties to this Agreement do not waive, and reserve the right to contest, any issues regarding sovereign immunity, the applicable governing law and the appropriate forum for resolving any disputes arising out of or relating to this Agreement.

Series 2009 & 2006C			
Long Term Rating	A/Positive	Affirmed	

Rationale

Standard & Poor's Ratings Services revised its rating outlook to positive from stable on the Illinois Finance Authority's series 1996B, 2004, 2006A, 2006C, and 2009 bonds. In addition, Standard & Poor's affirmed its 'A' long-term rating on the authority's \$42.78 million series 2006C revenue bonds and \$66.5 million series 2009 revenue bonds. Standard & Poor's also affirmed its 'AAA/A-1' dual rating on the authority's \$33.31 million series 2004 bonds, \$15.075 million series 2006A bonds, and series 1996B variable-rate demand bonds. All bonds were issued for Riverside Health System (RHS). The outlook on all ratings, where applicable, is positive.

The long-term component of the rating on the series 2004 and 2006A bonds is based on the application of our low-correlation joint-criteria methodology, whereby the rating on the letter of credit (LOC) provider J.P. Morgan Chase Bank N.A. is 'A+/A-1', and the underlying rating (SPUR) on the bonds is also affirmed at 'A'. We based the short-term component of the rating solely on the LOC provided by J.P. Morgan Chase Bank N.A., scheduled to expire on Feb. 15, 2016. The 'AAA' long-term component of the dual rating on the series 1996B bonds is based on the joint support of an LOC provided by LaSalle Bank N.A. (A+/A-1) and the 'A' SPUR on the bonds. We based the 'A-1' short-term component of the rating solely on the LOC provided by Bank of America, which is scheduled to expire on Aug. 30, 2014.

Total long-term debt as of Dec. 31, 2010, excluding current installments and unamortized bond discount and premium, is \$166.9 million, of which approximately 40% is variable-rate demand debt. Standard & Poor's also maintains an 'A+/A-1' dual rating on the authority's \$8.67 million series 2002B bonds issued for RHS, based solely upon a bank LOC.

The outlook revision and ratings reflect our view of RHS':

- Solid operations for the past three fiscal years that have averaged 4.5%;
- Stable liquidity, with cash on hand at approximately 350 days or more the past two fiscal years and potentially
 growing because RHS has completed major capital projects in fiscal 2011; and
- Continued leading market position.

Located in Kankakee, Ill., about 55 miles south of Chicago, RHS owns and operates a 270-staffed-bed acute-care hospital, eight community health centers, a 70,000-square-foot health fitness center located in Bourbonnais, Ill., an ambulance service, an 18-bed substance-abuse program, two ambulatory surgery centers, and a senior-living facility. The senior-living facility is located on the 100-acre medical center campus but is situated such that natural tree-line barriers make it seem as if located on an independent campus just beyond the medical center. The debt is secured by the revenues of RHS.

Outlook

The positive outlook reflects our belief that RHS' strong management team will maintain the health system's favorable market share, strong liquidity, and good financial performance. We could raise the ratings if RHS improves its cash to debt to more than 165% and leverage to 35% or less while maintaining current liquidity, operating margins and maximum annual debt service (MADS) coverage. We could revise the outlook to stable or lower the ratings if operations or liquidity decline materially for a sustained period.

Enterprise Profile

Market share and utilization

RHS retains the leading market share at somewhat more than 60%. In the market, RHS competes against Provena St. Mary's Hospital (BBB+/Stable as part of the Provena System). RHS has remained the primary health care provider in the market as the management team has focused on service lines such as cardiothoracic and vascular surgery, orthopedics, and neurosurgery. This focus, coupled with physician alignments and the substantial East Tower expansion, has positioned RHS to remain the market leader.

RHS' patient utilization trend was relatively flat in fiscal 2011. For the 11 months ended Nov. 30, RHS had 10,896 admissions. Management attributes the flat admissions largely to an increase in observation patients in the past couple of years. All other utilization statistics were also relatively flat for the 11-month period, with emergency room visits and inpatient surgery up approximately 1% over the prior-year period. Also, RHS' senior-living facility has high occupancy, with independent living at 94.4%, assisted living at 98.9%, and skilled nursing at 80%.

East Tower Expansion

In August 2009, RHS proceeded with an approximately \$62 million 216,000-square-foot hospital addition. Although the addition will not include new beds, it will add 12 operating rooms; seven labor, delivery, and recovery rooms; one dedicated C-section operating room; 18-private intensive-care rooms; 23 private medical/surgical rooms; and shelled space for a 50-bed unit, among other upgrades. Phases 1 and 2 have been completed and Phase 3, the buildout of an endoscopy procedures lab, will be completed by June 2012. The project is on time and budget.

Financial Profile

Operations

For the first 11 months of fiscal 2011, RHS produced an operating margin of 4.1% compared with 4.5% for all of fiscal 2010. Operations have been good at RHS over the past couple of years, with management watching the expense base as it enhances revenues. During the 11-month period, RHS was able to enhance its service lines and focus on cardiology, vascular health, thoracic health, orthopedics, and neurosurgery. Also during this period, RHS continued to enhance cancer care in the market in the wake of its 2008 affiliation with Rush University Medical Center. As it enhanced services, management also opened new ambulatory campuses in Coal City and Watseka, and plans to continue with this strategy of expanding in markets that it serves. Given the good operations, RHS had MADS coverage of 3.5x for the 11-month period. However, debt burden is still high, in our opinion, at 5.2% of revenues. For fiscal 2012 management is budgeting for an operating margin of 3.8%.

Balance sheet

Liquidity remains reasonably strong, in our view, with 348 days' cash on hand as of Nov. 30, 2011. We anticipate that liquidity should remain a strength for RHS, as it has substantially completed the East Tower project. Capital spending will slow outside of routine capital spending and some strategic capital spending to support future growth. However, cash to long-term debt, in our view, could be stronger as it was only 134% as of Nov. 30, 2011, while cash to puttable debt for the same period was solid at 327%.

N.A.--Not available.

Debt Derivative Profile: Low Credit Risk

Standard & Poor's assigned RHS a Debt Derivative Profile (DDP) overall score of '2' on a four-point scale, on which '1' represents the lowest risk. Riverside Health has entered into one floating- to fixed-rate swap (associated with the series 2004 issue) and one basis swap with Goldman Sachs, with aggregate notional amounts of \$33.9 million and \$25.0 million, respectively.

The DDP overall score of '2' indicates our view that the swaps are a low credit risk. The DDP score is a reflection of the counterparty credit ratings, the obligor's low-to-moderate termination risk, the low economic viability and long lives of the swaps over stressful economic cycles, and good management oversight of the swap plan. RHS has variable-rate exposure of 40% of its total debt, or 21% after taking into account its swaps .

Rating Update: Moody's affirms Riverside Health System's (IL) A2 revenue bond rating; Outlook remains stable

Global Credit Research - 11 Sep 2012

Affects \$151 million of rated debt outstanding

ILLINOIS FINANCE AUTHORITY
Hospitals & Health Service Providers

Opinion

NEW YORK, September 11, 2012 --Moody's Investors Service has affirmed the A2 bond rating on Riverside Health System's (RHS) approximately \$151 million of rated revenue bonds outstanding issued through the Illinois Finance Authority (see Rated Debt section). The rating outlook remains stable. RHS's debt includes five series of variable rate demand obligation (VRDO) bonds, totaling approximately \$61 million outstanding (which factors an early principal payment of \$5.1 million earlier in 2012). The VRDO bonds are supported by letters of credit (LOC) from JPMorgan Chase Bank that expire at incremental points over the next five years. Three of the series of VRDO bonds had been supported by Bank of America LOCs, which RHS transitioned to JPMorgan Chase Bank LOCs earlier in 2012.

SUMMARY RATING RATIONALE

The affirmation of the A2 rating and stable outlook reflect RHS's track record of very strong operating margins and balance sheet strength and distinctly leading market share. We note that debt coverage ratios are modest at the A2 rating level.

STRENGTHS

- *Distinctly leading market share in the two-hospital market of Kankakee County. According to management, excluding out-migration, Riverside captured 62.5% inpatient market share in 2011.
- *Track record of very strong and consistent operating results continues in fiscal year (FY) 2011 (15.1% operating cash flow margin) and through six months FY 2012 (15.8% operating cash flow margin). Since FY 2000, RHS has recorded an operating cash flow margin of no less than 10.4%.
- *Very strong balance sheet with 347 days cash on hand at fiscal year end (FYE) 2011.
- *Manageable capital spending plans in the coming years.

CHALLENGES

- *Modest Moody's adjusted debt coverage ratios at the A2 rating level (64% debt-to-total operating revenue, 3.5 times debt-to-cash flow, 3.9 times maximum annual debt service coverage, and 128% cash-to-debt based on FY 2011 results). We note that RHS has essentially no debt equivalents outstanding (e.g., operating leases or defined benefit pension plan).
- *RHS is considering issuing new money debt in the coming years. Net this is expected to increase debt by approximately \$20 million (factoring the early principal repayment of a portion of the Series 2004 and Series 2006A VRDO bonds earlier in 2012).
- *With an operating revenue base of just over \$270 million in FY 2011, RHS is small for an A2 rated hospital (A2 median operating revenue is nearly \$520 million).
- *Elevated reliance on Medicare (51% of gross revenues in FY 2011, compared to all ratings median of 44%) and Medicaid (15% of gross revenues, compared to all ratings median of 13%), which heightens Riverside's vulnerability

to federal and state reimbursement reductions.

*At FYE 2011, approximately 38% of RHS's debt was in VRDO mode. RHS's monthly liquidity-to-demand debt measured an adequate 340% at FYE 2011.

DETAILED CREDIT DISCUSSION

LEGAL SECURITY: Debt service on the outstanding rated bonds is secured by a joint and several pledge of unrestricted receivables of the Riverside Health System and its obligated affiliates, the Riverside Medical Center, Riverside Senior Living Center, and Oakside Corporation.

INTEREST RATE DERIVATIVES: RHS is a party to two interest rate swap agreements. Goldman Sachs Group is the counterparty on both swaps. RHS entered into a floating-to-fixed rate swap to hedge the interest rate risk on the Series 2004 VRDO bonds. Riverside pays a fixed rate of 3.794% and receives a variable rate of 57% of one-month LIBOR plus 54 basis points. The swap expires in 2029, coinciding with the maturity of the Series 2004 bonds.

Riverside's second derivative agreement with Goldman Sachs is a basis swap. Riverside pays a variable rate based on SIFMA and receives a variable rate of 68% of three-month LIBOR plus 67 basis points.

The net termination value of the swaps was a negative \$6.6 million to RHS at FYE 2011 and, according to management, negative \$7.7 million to RHS at June 30, 2012.

RECENT DEVELOPMENTS/RESULTS

RHS continues to maintain a distinctly leading market position in its primary service are (PSA), which covers Kankakee County (A1 general obligation rating) as well as surrounding communities such as southern Will County. The only other acute care hospital in Kankakee is St. Mary's Hospital (a member of Baa1 rated Provena Health, which, together with Baa1 Rated Resurrection Health Care, merged in late 2011 to form Presence Health). According to management, Riverside captured 62.5% of inpatient admission market share in 2011 compared to 37.5% for St. Mary's (excluding out-migration). Market share trends have been stable in recent years. RHS continues to focus on broadening its market reach, particularly north of Kankakee into demographically attractive Will County (Aa1 GO rating).

RHS has a track record of strong operating margins. In audited FY 2011 (December 31 year end), RHS recorded operating income of \$15.7 million (5.8% operating margin) and operating cash flow of \$41.0 million (15.1% operating cash flow margin). In FY 2010, RHS recorded operating income of \$12.1 million (4.5% margin) and operating cash flow of \$41.1 million (15.3% margin). Favorably, since FY 2000, Riverside has had an operating cash flow margin of at least 10.4% (the A2 median operating cash flow margin is 9.8%).

RHS management continues to focus on expense management and expanding its geographic reach to enhance revenue opportunities, which continued to benefit the system in FY 2011. In FY 2011, inpatient admissions increased 0.6%, which was the first year of growth since FY 2007. A significant contributor to the inpatient admission declines in recent years has been a shift to observation stays (a common trend in most healthcare markets in the US). Observation stays also grew in FY 2011 (6.5%), resulting in a 1.5% increase in total admissions. The admissions growth helped to offset a 1.0% decrease in total surgeries in FY 2011. Because of RHS's higher than average exposure to Medicaid and self-pay patients (e.g., Medicaid represented 15.0% of RHS's gross revenues in FY 2011, compared to the all ratings median of 13.0%), the system continues to be a net recipient from the state's provider tax program (approximately \$5.5 million net per year). Management continually focuses on expense management throughout RHS (e.g., productivity enhancement, matching staffing levels to volumes, employee benefit costs, and supply chain). As a result, expense growth continues to be modest (0.1% in FY 2011).

Looking forward, RHS management expects to maintain an operating cash flow margin of approximately 15%, despite the headwind challenges facing the healthcare industry. Management believes there continue to be areas of improvement for the system. For example, RHS is expanding its geographic reach with new outpatient sites planned or recently completed north and south of Kankakee. RHS also plans to expand its profitable senior living facilities. A particular area of focus for expense management is reducing RHS's average length of stay (ALOS). The system's ALOS decreased from 4.91 days through six months FY 2011 to 4.65 days through six months FY 2012. Management estimates that a 0.5 day reduction in ALOS results in approximately \$4 million of annual expense savings (plus avoided capital spending). Through six months FY 2012, based on management prepared interim financial statements, RHS recorded an operating cash flow margin of 15.8%, compared to 15.9% for the same

period FY 2011. In order to preserve operating margins, we believe these continuous improvement efforts will be needed as RHS is more dependent on Medicare, which comprised 51% of gross revenues in FY 2011 (compared to the all ratings median of 44%). Given the scope of the federal budget deficit, as well as hardwired reimbursement cuts included in healthcare reform, we believe future rate increases from Medicare will be minimal.

Despite strong cash flow generation, RHS's Moody's adjusted debt ratios remain somewhat modest at the A2 rating level. Based on FY 2011 results, adjusted maximum annual debt service coverage measured 3.9 times (A2 median is 4.9 times) and adjusted debt-to-cash flow measures 3.5 times (A2 median is 3.1 times). RHS's debt-to-total operating revenue remained a high 64% at FYE 2011 (A2 median is 35%).

RHS's balance sheet ratios moderated somewhat in FY 2011 due the system's use of internal funds to complete the funding of the new East Tower project. At FYE 2011 (December 31 year end), RHS's absolute unrestricted cash and investments decreased to \$225 million from \$236 million at FYE 2010. Cash on hand remained a very strong 347 days at FYE 2011, down from 371 days at FYE 2010 (A2 median is 195 days). Due to RHS's high debt load, cash-to-debt is comparatively more modest, although still adequate. At FYE 2011, RHS's cash-to-debt measured 128%, down slightly from 132% at FYE 2010 (A2 median is 143%). According to management, at FYE 2011, RHS's unrestricted cash and investments were allocated among 53% cash and fixed income securities, 44% equities, and 4% other investments, and 100% of investments could be liquidated within one month. RHS management expects the system's balance sheet ratios to improve in the coming years.

At FYE 2011, approximately 38% of RHS's outstanding debt was in VRDO mode in five series. All five series of VRDO bonds are now supported by LOCs from JPMorgan Chase Bank (three of the five LOCs were converted from Bank of America to JPMorgan Chase earlier in 2012). The LOCs expire at various points over the next five years. RHS's monthly liquidity-to-demand debt measured an adequate 340% at FYE 2011. After FYE 2011, RHS canceled the Radian insurance support of the Series 2004 and Series 2006A VRDO bonds. As part of this transaction, RHS no longer was obligated to maintain a debt service reserve fund (DSRF) supporting these bonds; RHS used the freed DSRF funds to pay down approximately \$5.1 million of principal of Series 2004 and Series 2006A bonds.

RHS completed the new three-story East Tower project in phases during 2011 (on time and on budget, according to management). Between FY 2012 and FY 2014, RHS has approximately \$88 million of capital spending plans, translating to an average capital spending ratio of a manageable 1.2 times (the all ratings median capital spending ratio is 1.2 times). Highlighted projects include expansion of ambulatory sites outside of Kankakee, new senior living facilities on the Bourbonnais campus, expanded inpatient rehab, and an expanded radiation center. To support the system's capital spending plans, RHS management is considering adding approximately \$20 million of net new debt in the next year.

OUTLOOK

The stable outlook reflects our expectation that RHS will maintain strong operating margins and balance sheet strength and distinctly leading market share, to offset the system's leveraged debt ratios.

WHAT COULD MAKE THE RATING GO UP

Material increase in admissions and revenue base to levels consistent with higher rating categories; maintenance of strong operating margins and balance sheet ratios; improved debt coverage ratios.

WHAT COULD MAKE THE RATING GO DOWN

Materially weaker operating margins; significant market share loss; significantly weaker balance sheet ratios; larger than expected increase in debt without commensurate increase in cash flow.

KEY INDICATORS

Assumptions & Adjustments:

- -Based on Riverside Health System and Obligated Affiliates special purpose combined financial statements and combining schedules
- -First number reflects audited FY 2010 for the year ended December 31, 2010
- -Second number reflects audited FY 2011 for the year ended December 31, 2011

- -Investment returns normalized at 6% unless otherwise noted
- -Comprehensive debt includes direct debt, operating leases, and pension obligation, if applicable
- *Inpatient admissions: 11,747; 11,816
- *Observation stays: 2,249; 2,396
- *Medicare % of gross revenues: 50.0%; 50.8%
- *Medicaid % of gross revenues: 14.4%; 15.0%
- *Total operating revenues (\$): \$268.5 million; \$272.4 million
- *Revenue growth rate (%) (3 yr CAGR): 6.3%; 3.3%
- *Operating margin (%): 4.5%; 5.8%
- *Operating cash flow margin (%): 15.3%; 15.1%
- *Debt to cash flow (x): 3.48 times; 3.46 times
- *Days cash on hand: 371 days; 347 days
- *Maximum annual debt service (MADS) (\$): \$14.4 million; \$14.4 million
- *MADS coverage with reported investment income (x): 3.10 times; 3.54 times
- *Moody's-adjusted MADS Coverage with normalized investment income (x): 3.93 times; 3.88 times
- *Direct debt (\$): \$179 million; \$175 million
- *Cash to direct debt (%): 132%; 128%
- *Comprehensive debt: \$179 million; \$175 million
- *Cash to comprehensive debt (%): 132%; 128%
- *Monthly liquidity to demand debt (%): 338%; 340%
- RATED DEBT (issued through the Illinois Finance Authority) (amounts outstanding as of December 31, 2011):
- -Series 2009 Fixed Rate Revenue Bonds (\$66.5 million outstanding), A2 rating
- -Series 2006C Fixed Rate Revenue Bonds (\$42.6 million outstanding), A2 rating
- -Series 2006A VRDO Revenue Bonds (\$15.0 million outstanding), rated Aa1/VMIG1 based on LOC provided by JPMorgan Chase Bank, N.A. (LOC expires February 15, 2016), A2 underlying rating
- -Series 2004 VRDO Revenue Bonds (\$32.1 million outstanding), rated Aa1/VMIG1 based on LOC provided by JPMorgan Chase Bank, N.A. (LOC expires February 15, 2016), A2 underlying rating
- -After FYE 2011, RHS cancelled the Radian Asset Assurance support of the Series 2004 and Series 2006A VRDO bonds. As part of this transaction, the DSRF supporting the Series 2004 and Series 2006A bonds was released, the proceeds of which were used to pay down principal on the bonds of approximately \$5.1 million.

PRINCIPAL METHODOLOGY USED

The principal methodology used in this rating was Not-For-Profit Healthcare Rating Methodology published in March 2012. Please see the Credit Policy page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

The Global Scale Credit Ratings on this press release that are issued by one of Moody's affiliates outside the EU are endorsed by Moody's Investors Service Ltd., One Canada Square, Canary Wharf, London E 14 5FA, UK, in accordance with Art.4 paragraph 3 of the Regulation (EC) No 1060/2009 on Credit Rating Agencies. Further information on the EU endorsement status and on the Moody's office that has issued a particular Credit Rating is available on www.moodys.com.

For ratings issued on a program, series or category/class of debt, this announcement provides relevant regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides relevant regulatory disclosures in relation to the rating action on the support provider and in relation to each particular rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides relevant regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

Moody's considers the quality of information available on the rated entity, obligation or credit satisfactory for the purposes of issuing a rating.

Moody's adopts all necessary measures so that the information it uses in assigning a rating is of sufficient quality and from sources Moody's considers to be reliable including, when appropriate, independent third-party sources. However, Moody's is not an auditor and cannot in every instance independently verify or validate information received in the rating process.

Please see the ratings disclosure page on www.moodys.com for general disclosure on potential conflicts of interests.

Please see the ratings disclosure page on www.moodys.com for information on (A) MCO's major shareholders (above 5%) and for (B) further information regarding certain affiliations that may exist between directors of MCO and rated entities as well as (C) the names of entities that hold ratings from MIS that have also publicly reported to the SEC an ownership interest in MCO of more than 5%. A member of the board of directors of this rated entity may also be a member of the board of directors of a shareholder of Moody's Corporation; however, Moody's has not independently verified this matter.

Please see Moody's Rating Symbols and Definitions on the Rating Process page on www.moodys.com for further information on the meaning of each rating category and the definition of default and recovery.

Please see ratings tab on the issuer/entity page on www.moodys.com for the last rating action and the rating history.

The date on which some ratings were first released goes back to a time before Moody's ratings were fully digitized and accurate data may not be available. Consequently, Moody's provides a date that it believes is the most reliable and accurate based on the information that is available to it. Please see the ratings disclosure page on our website www.moodys.com for further information.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Notwithstanding the foregoing, credit ratings assigned on and after October 1, 2010 by Moody's Japan K.K. ("MJKK") are MJKK's current opinions of the relative future credit risk of entities, credit commitments, or debt or debt-like securities. In such a case, "MIS" in the foregoing statements shall be deemed to be replaced with "MJKK". MJKK is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO.

This credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be dangerous for retail investors to make any investment decision based on this credit rating. If in doubt you should contact your financial or other professional adviser.

1120.130 - Financial Waiver

The applicant entity for this project has an "A" bond rating, and the project is to be funded 100% with cash and securities.

Evidence of the "A" bond rating is appended to Attachment #39.

1120.130 - Financial Viability Ratios

The applicant entity for this project has an "A" bond rating, and the project is to be funded 100% with cash and securities.

Evidence of the "A" bond rating is appended to Attachment #39.

1120.140 - Economic Feasibility

A. Reasonableness of Financing Arrangements

This section of this criterion is not applicable since the project is to be funded with 100% cash

B. Conditions of Debt Financing

This section of this criterion is not applicable since the project is to be funded with 100% cash

C. Reasonableness of Project and Related Costs

COST AND GROSS SQUARE FEET BY DEPARTMENT OR SERVICE									
Department (list below)	Α	В	С	D	E	F	G	Н	T-4-1 04

D. Projected Operating Costs

E. Total Effect of the Project on Capital Costs

Neither, of these sections, are applicable to this project because a free-standing emergency department does not have patient days on which to base an equivalent patient day figure, making it impossible to calculate the above figures

XI. SAFETY NET IMPACT STATEMENT

As discussed in the section on Purpose of the Project, Riverside Medical Center has a primary goal of improving access to health care for the communities it services. This project will positively impact the availability of essential safety net services. Therefore, the project will have no adverse impact on safety net services of any provider in the area.

XII. Charity Care Information

Riverside Medical Center recognizes it has a responsibility to the region to provide services to all regardless of ability to pay and to support the region in a consistent charitable manner. The organization has a formal policy in place regarding charity care and collection processes Attachment 44(a).

Riverside publishes its annual Community Benefit Summary (Attachment 44b) and Community Benefit Report (Attachment 44c).

Below is the mission statement of Riverside Medical Center:

Life is a remarkable journey.

Health impacts every step---how we connect with others, how we express our potential, how we pursue our dreams.

At Riverside, our mission is to provide healthcare experiences that are just as remarkable.

We do this for each person, regardless of social or economic circumstance.

We offer our highest thinking, our kindest touch, and our strongest commitment to excellence.

Policy Information

Subject:

Charity Care and Collection Practices Guidelines for Uninsured and Underinsured Charity Care Patients

Policy:

I. Policy

Riverside Medical Center's mission is to provide a remarkable healthcare experience. We do this for each and every person, regardless of their personal or economic circumstance. Riverside is committed to provide charity care to persons who have healthcare needs and are uninsured, underinsured, ineligible for a government program, or otherwise unable to pay for medically necessary care based on their individual financial situation. The following guidelines are used when determining if financial assistance is appropriate or needed. These guidelines are intended for the use of the hospital and its collection agencies. The guidelines may be used by other entities of Riverside Healthcare; however each entity will determine their own specific policies related to charity care. Under no circumstances does this policy delay or prevent the treatment of emergency medical care. Riverside Medical Center provides care for emergency medical conditions to individuals regardless of their eligibility under the financial assistance policy.

Accordingly, this written policy:

- Includes eligibility criteria for financial assistance -- free and discounted (partial charity) care
- Describes the basis for calculating amounts charged to patients eligible for financial assistance under this policy
- Describes the method by which patients may apply for financial assistance
- Describes how the hospital will publicize the policy within the community served by the hospital
- Limits the amounts that the hospital will charge for emergency or other medically necessary care provided to individuals eligible for financial assistance to amount generally billed (received by) the hospital for Medicare patients

Charity is not considered to be a substitute for personal responsibility. Patients are expected to cooperate with Riverside Medical Center's procedures for obtaining charity or other forms of payment or financial assistance, and to contribute to the cost of their care based on their individual ability to pay. Individuals with the financial capacity to purchase health insurance shall be encouraged to do so, as a means of assuring

access to health care services, for their overall personal health, and for the protection of their individual assets. Patients may be asked to provide, if applicable:

- A copy of the family's most recent tax return;
- Current bank statements (checking and savings);
- Proof of income for the patient and spouse, if married: 3 most recent pay stubs; social security statements; or unemployment stubs;
- Current Medicaid or LINK card; and
- Patients indicating they have no income must provide information as to how they are currently supporting themselves.

Patients requesting the **Uninsured** Discount will only be asked to provide **one** of the following (as required by Public Act 095-0965, the Hospital Uninsured Patient Discount Act):

- A copy of the most recent tax return
- Copies of the 2 most recent pay stubs

In order to manage its resources responsibly and to allow Riverside Medical Center to provide the appropriate level of assistance to the greatest number of persons in need, the Board of Directors establishes the following guidelines for the provision of patient charity.

II. Definitions

For the purpose of this policy, the terms below are defined as follows:

Charity Care: Healthcare services that have been or will be provided but are never expected to result in cash inflows. Charity care results from a provider's policy to provide healthcare services free or at a discount to individuals who meet the established criteria.

Family: Using the Census Bureau definition, a group of two or more people who reside together and who are related by birth, marriage, or adoption. According to Internal Revenue Service rules, if the patient claims someone as a dependent on their income tax return, they may be considered a dependent for purposes of the provision of financial assistance.

Family Income: Family Income is determined using the Census Bureau definition, which uses the following income when computing federal poverty guidelines:

 Includes earnings, unemployment compensation, workers' compensation, Social Security, Supplemental Security Income, public assistance, veterans' payments, survivor benefits, pension or retirement income, interest, dividends, rents, royalties, income from estates, trusts, educational assistance, alimony, child support, assistance from outside the household, and other miscellaneous sources;

- Noncash benefits (such as food stamps and housing subsidies) do <u>not</u> count;
- Determined on a before-tax basis:
- Excludes capital gains or losses; and
- If a person lives with a family, includes the income of all family members (Non-relatives, such as housemates, do not count).

Uninsured: The patient has no level of insurance or third party assistance to assist with meeting his/her payment obligations.

Underinsured: The patient has some level of insurance or third-party assistance but still has out-of-pocket expenses that exceed his/her financial abilities.

Gross Charges: The total charges at the organization's full established rates for the provision of patient care services before deductions from revenue are applied.

Emergency medical conditions: Defined within the meaning of section 1867 of the Social Security Act (42 U.S.C. 1395dd).

Medically necessary: As defined by Medicare (services or items reasonable and necessary for the diagnosis or treatment of illness or injury).

Procedure:

III. Procedures

- A. Services Eligible Under this Policy. For purposes of this policy, "charity" or "financial assistance" refers to healthcare services provided by Riverside Medical Center without charge or at a discount to qualifying patients. The following healthcare services are eligible for charity:
 - Emergency medical services provided in an emergency room setting;
 - 2. Services for a condition which, if not promptly treated, would lead to an adverse change in the health status of an individual;
 - 3. Non-elective services provided in response to life-threatening circumstances in a non-emergency room setting; and
 - 4. Medically necessary services, evaluated on a case-by-case basis at Riverside Medical Center's discretion.
- **B. Eligibility for Charity.** Eligibility for charity will be considered for those individuals who are uninsured, underinsured, ineligible for any government health care benefit program, and who are unable to pay for their care, based upon a determination of financial need in accordance with this Policy. The granting of charity shall be based on an individualized determination of financial need, and shall not take into account age, gender, race, social or immigrant status, sexual orientation or religious affiliation.

Riverside Medical Center offers the following options for patients who are unable to pay

their out-of-pocket expense in full:

- 1. Reasonable payment plans
 - a. Available to all patients.
 - b. Assists patients in meeting their financial obligation by way of reasonable payment arrangements.
- 2. Self-pay discount for patients without insurance
 - a. Offers an automatic 45% discount off of gross charges. No application needed.
- 3. Financial Assistance
 - a. Available to all patients.
 - b. Assists patients in meeting their financial obligation by way of free care or discounted rates based on family size and income. Application and income verification required. (Exception see presumptive, described later in this Policy.)

C. Method by Which Patients May Apply for Charity Care.

- 1. Financial need will be determined in accordance with procedures that involve an individual assessment of financial need; and may
 - Include an application process, in which the patient or the patient's guarantor are required to cooperate and supply personal, financial and other information and documentation relevant to making a determination of financial need:
 - Include the use of external publicly available data sources that provide information on a patient's or a patient's guarantor's ability to pay (such as credit scoring);
 - Include reasonable efforts by Riverside Medical Center to explore appropriate alternative sources of payment and coverage from public and private payment programs, and to assist patients to apply for such programs;
 - Take into account the patient's available assets, and all other financial resources available to the patient; and
 - Include a review of the patient's outstanding accounts receivable for prior services rendered and the patient's payment history.
- 2. It is preferred but not required that a request for charity and a determination of financial need occur prior to rendering of non-emergent medically necessary services. However, the determination may be done at any point in the collection cycle. The need for financial assistance shall be re-evaluated at each subsequent time of service if the last financial evaluation was completed more than six months prior, or at any time additional information relevant to the eligibility of the patient for charity becomes known.
- 3. Riverside Medical Center's values of human dignity and stewardship shall be reflected in the application process, financial need determination and granting of charity. Requests for charity shall be processed promptly and Riverside Medical Center shall notify the patient or patient in writing within 30 days of receipt of a completed application.

- 4. Discounts will be applied to all open self-pay balances, regardless of the age of the account. Previously paid bills will not be considered for charity, nor will patient payments be refunded unless required by regulation. Partial discounts or denials of financial assistance will require the patient to pay the remaining balance in full or contact the hospital to establish a reasonable payment plan.
- 5. Incomplete applications will be denied. A letter indicating what information is missing will be sent to the patient. Upon receipt of the missing information, the application will be reconsidered.
- 6. Patients may appeal denials for financial assistance, in writing. Patients should include any additional information that was not submitted with the original application to help support their reason for appealing the decision. Appeals will be reviewed and responded to within 45 business days. Appeals are reviewed by designated staff in the Patient Financial Services Department of Riverside Medical Center.
- 7. In the event the patient does not initially qualify for financial assistance after providing the requested information and documentation, patients may re-apply if there is a change in their income, assets, or family size responsibility.

Applications will be reviewed and decisions of eligibility will be determined as follows:

- The Financial Counselor will be responsible to determine eligibility.
- The Customer Service Coordinator will approve financial assistance up to \$1,000.
- The Director of Patient Financial Services will approve financial assistance for amounts greater than \$1,000.
- The Vice President of Finance or the Chief Financial Officer will co-sign and approve financial assistance amounts greater than \$5,000.
- **D. Presumptive Financial Assistance Eligibility.** There are instances when a patient may appear eligible for charity care discounts, but there is no financial assistance form on file due to a lack of supporting documentation. Often there is adequate information provided by the patient or through other sources, which could provide sufficient evidence to provide the patient with charity care assistance. In the event there is no evidence to support a patient's eligibility for charity care, Riverside Medical Center may use outside agencies in determining estimate income amounts for the basis of determining charity care eligibility and potential discount amounts. Presumptive eligibility may be determined on the basis of individual life circumstances that may include:
 - 1. State of Illinois Veteran's Home determination of indigence, known as Aid and Attendance;
 - 2. Current Medicaid eligibility with prior dates of service not covered by or not eligible for Medicaid;
 - Illinois LINK card eligibility (food stamps);
 - 4. Patients who are eligible to receive assistance under the Crime Victims

Act;

- 5. Patients who are eligible to receive assistance under the Sexual Assault Act:
- Patients receiving the Uninsured Discount;
- 7. Patients receiving free care from a community clinic and the community clinic refers the patient to Riverside Medical Center for services the clinic is unable to provide
- 8. Patients receiving care at Riverside's New Life Center (Title X Clinic) and referred to the hospital for services. (If Medicare non-covered service, New Life will obtain the signed ABN (Advanced Beneficiary Notice) and stamp "Title X Clinic" on the ABN or physician order. Patients serviced at the New Life Center have an income equal to or less than the Federal Poverty Level.
- State-funded prescription programs;
- 10. Homeless or received care from a homeless clinic;
- 11. Participation in Women, Infants and Children programs (WIC);
- 12. Eligible for Illinois Health Women's program;
- 13. Subsidized school lunch program eligibility;
- 14. Eligibility for other state or local assistance programs that are unfunded (e.g., Medicaid spend-down; CHIPS and DMH);
- 15. Patient's eligible for the Department of Alcohol and Substance Abuse contract reimbursed (non-Medicaid);
- 16. Patients that are mentally or physically incapacitated and have no agent acting on their behalf;
- 17. Patients that file bankruptcy;
- 18. Patients that are on military active duty;
- 19. Patients that are incarcerated:
- 20. Patients that have been determined to have no assets by our collection agency partner;
- 21. Low income/subsidized housing is provided as a valid address; and
- 22. Patient is deceased with no known estate.
- 23. Radiation Oncology Transportation, when appropriate (see separate policy)

E. Eligibility Criteria and Amounts Charged to Uninsured and Underinsured Patients. Services eligible under this Policy will be made available to the patient on a sliding fee scale, in accordance with financial need, as determined in reference to Federal Poverty Levels (FPL) in effect at the time of the determination. To be considered for a discount under Riverside's charity policy, a person must cooperate with the hospital to provide the information and documentation necessary to apply for other existing financial resources that may be available to pay for his/her health care, such as Medicare, Medicaid, AllKids, third-party liability, etc. Patients must cooperate with their insurance carrier and provide any requested information (i.e. coordination of benefits information; student verification; etc.) Riverside's obligations toward an individual patient will cease if the patient unreasonably fails or refuses to provide Riverside with information or documentation requested or if the patient fails to apply for coverage under public programs within 30 days of Riverside's request.

Once a patient has been determined by Riverside Medical Center to be eligible for financial assistance, that patient shall not receive any future bills based on undiscounted gross charges. The basis for the amounts Riverside Medical Center will charge patients qualifying for financial assistance is as follows:

- 1. Patients whose family income is at or below 200% of the FPL are eligible to receive free care;
- 2. Using a sliding scale, a partial discount may be offered based on the individual's family income and, for those without insurance, in accordance with the State of Illinois Public Act 095-0965, the Hospital Uninsured Patient Discount Act.
- 3. Patients may be eligible to receive discounted rates on a case-by-case basis based on their specific circumstances, such as catastrophic illness or medical indigence, at the discretion of Riverside Medical Center; however the discounted rates shall not be greater than the amounts generally billed to (received by the hospital for) Medicare patients.
- 4. Uninsured patients may be eligible for a maximum collectible amount of 25% of the patient's family income, if they are found to be eligible for financial assistance and if they do not own assets having a value in excess of 600% of the FPL. The 25% maximum is for a 12-month period beginning with the date the patient becomes eligible under the hospital's charity care policy. Excluded from the excess assets are the patient's primary residence; personal property exempt from judgment under Section 12-1001 of the Code of Civil Procedure; or any amounts held in a pension or retirement plan. (Distributions from a retirement plan are considered income and are not exempt.)
- 5. An uninsured patient must inform the hospital, in writing, before or after each subsequent visit in the 12-month period that they are eligible for the maximum collectible cap. The maximum collectible may be granted to patients with insurance on a case-by-case basis. Additional details may be found in the Hospital Uninsured Patient Discount Act policy RMC-PT ACCT 910-03-0598.
- 6. Each situation will be reviewed independently and allowances may be made for extenuating circumstances based on good faith efforts and mitigating factors.
- 7. Patients receiving special pricing for the delivery of a baby, bariatric surgery, dietary consults, cardiac rehabilitation Phases 3 and 4 or other special priced services requiring payment in full prior to service being provided are not eligible for further discounting.

The hospital's use of the federal poverty guidelines (FPL) will be updated annually in conjunction with the FPL updates published by the United States Department of Health and Human Services. Annual adjustments to discounts will also be based on the calculations of the State of Illinois' Hospital Uninsured Patient Discount Act.

Riverside Medical Center will require that the patient certify that all of the information provided in the application is true. If any of the information is untrue, any discount granted to the patient is forfeited.

- F. Communication of the Charity Program to Patients and Within the Community. Notification about charity available from Riverside Medical Center which shall include a contact number, shall be disseminated by Riverside Medical Center by various means, which may include, but are not limited to, the publication of notices in patient bills and by posting notices in various patient care areas, in the Patient Handbook, admitting and registration departments, hospital cashier offices, and patient financial services offices that are located on facility campuses, and at other public places as Riverside Medical Center may elect. Riverside Medical Center also shall publish a summary of this charity care policy on the facility website, in brochures available in patient access sites and at other places within the community served by the hospital as Riverside Medical Center may elect. Such notices and summary information shall be provided in the primary languages spoken by the population serviced by Riverside Medical Center. Referral of patients for charity may be made by any member of the Riverside Medical Center staff or medical staff, including physicians, nurses, financial counselors, social workers, case managers, chaplains, and religious sponsors. A request for charity may be made by the patient or a family member, close friend, or associate of the patient, subject to applicable privacy laws.
- G. Relationship to Collection Policies. Riverside Medical Center management shall develop policies and procedures for internal and external collection practices (including actions the hospital may take in the event of non-payment, including collections action and reporting to credit agencies) that take into account the extent to which the patient qualifies for charity, a patient's good faith effort to apply for a governmental program or for charity from Riverside Medical Center, and a patient's good faith effort to comply with his or her payment agreements with Riverside Medical Center. For patients who qualify for charity and who are cooperating in good faith to resolve their discounted hospital bills, Riverside Medical Center may offer extended payment plans, will not send unpaid bills to outside collection agencies, and will cease all collection efforts against those cooperating patients. Riverside Medical Center will not impose extraordinary collections actions for any patient without first making reasonable efforts to determine whether that patient is eligible for charity care under this financial assistance policy. Reasonable efforts shall include:
 - 1. Validating that the patient owes the unpaid bills and that all sources of third-party payments have been identified and billed by the hospital;
 - 2. Documentation that Riverside Medical Center has or has attempted to offer the patient the opportunity to apply for charity care pursuant to this policy and that the patient has not complied with the hospital's application requirements;
 - 3. Documentation that the patient has been offered a payment plan but has not honored the terms of that plan.

Riverside Medical Center's external collection agencies will also identify patients that may qualify for charity care and will assist in communicating Riverside's financial assistance policy and mail applications to patients requesting assistance.

Legal action, including the garnishment of wages, may be taken by Riverside Medical

Center to enforce the terms of the charity payment plan. Such measures would only take place when there is evidence that the charity care patient or responsible party has sufficient income and/or assets to meet his/her obligation. The hospital will not place a lien on a charity care patient's primary residence and will not execute a lien by forcing the sale or foreclosure of a charity care patient's primary residence to pay for an outstanding medical bill. Riverside Medical Center will not use body attachments to require the charity care patient or responsible party to appear in court; however the hospital recognizes that the court system may take this action independently.

H. Regulatory Requirements. In implementing this Policy, Riverside Medical Center management and facilities shall comply with all other federal, state, and local laws, rules, and regulations that may apply to activities conducted pursuant to this Policy.

Community Benefits Plan and Assessment Update

2011

Transforming lives with access to the

"Approach," "Enter," "Access," "Use"—these are simple terms often associated with a journey and all too often impeded by obstacles for many when it comes to healthcare. Imagine a place where obstacles are removed and the highest

very best care...

thinking, the kindest touch and the strongest commitment to excellence come together to transform a community. Imagine a progressive healing environment with innovative, advanced medical approaches and an unyielding commitment to pave the way to better health and better care for all. Imagine...Riverside Medical Center.

When Riverside first opened its doors in 1964, we opened more than just another hospital. We created a threshold to advance the level of care in the region through expertise, technology, and excellence for all who live, work and raise their families here. Riverside Medical Center continues to transform the patient experience and the communities we serve by widening the scope of services we provide, the areas we serve and the people with whom we connect.

The diversity of our region and the needs of the people that reside here are varied. Riverside addresses these changing and developing needs by offering the best preventative programs, the latest treatments, and the most convenient access for those seeking care. We are the premier healthcare system in the region and a destination for the highest quality care--regardless of a patient's gender, race or economic circumstances.

Each year, we at Riverside maintain a single purpose, to make each person's journey a remarkable one. We strive to eliminate obstacles and provide clear paths to improved health and well-being for our patients, their families, our employees, and our communities. We do this through community outreach and volunteer programs and services.

We invite you to read this publication to learn more.

Phillip Kambic

President and Chief Executive Officer

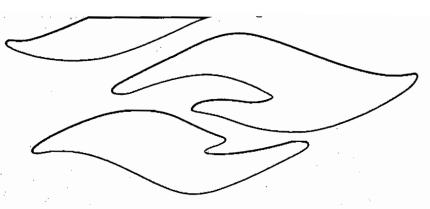

Making Great Care Even Better

"Driving far distances in unfamiliar areas can be inconvenient, confusing and stressful the older we get. We have had a long relationship of care with Riverside over many years, and the fact that Riverside's healthcare professionals care enough to come to us, in our own home town, is a true blessing. We are delighted to have the specialists of Riverside Medical Center here in Watseka. The providers and staff are kind, knowledgeable, and really take the time to get to know us—makes the excellent care we receive here that much better."

-Reverend & Mrs. Hubert Lytle, Watseka, Illinois

About

Riverside Medical Center

Riverside Medical Center is a not-for-profit healthcare institution located in Kankakee, Illinois, and is part of Riverside HealthCare, a fully integrated healthcare system serving the needs of patients throughout the counties of Kankakee, Iroquois, Will, Grundy and beyond. We are a nationally recognized, award-winning Level II Trauma hospital with leading programs in heart care, cancer care, neurosurgery and orthopedics. Our reputation for nursing excellence has made Riverside the area's only Magnet® Recognized hospital and our clinical performance ranks us among the top 5 percent of hospitals nationwide. We recently received the HealthGrades'

Distinguished Hospital for Clinical Excellence Award. Riverside's commitment to providing quality care throughout the communities it serves is evidenced by our numerous Riverside community, primary and specialty health centers in the region.

Life is a remarkable journey.

Health impacts every step - how we connect with others, how we express our potential, how we pursue our dreams.

At Riverside, our mission is to provide healthcare experiences that are just as remarkable.

We do this for each and every person, regardless of their personal or economic circumstances.

We offer our highest thinking, our kindest touch, and our strongest commitment to excellence.

Since opening its doors in 1964, Riverside Medical Center has provided the highest quality care to the people of Kankakee and our surrounding communities. The regional health system includes a state-of-the-art main hospital in Kankakee, an outpatient campus in Bourbonnais featuring a radiation center, diagnostic center, outpatient surgery center and a medically-based wellness center. Additionally, Riverside has health clinics in nine communities throughout Kankakee, Will, Grundy and Iroquois counties.

INTEGRITY: We respect human dignity and consistently promote fairness and honesty.

EXCELLENCE: We strive for clinical, operational and service excellence by fostering professional development, accountability,

teamwork, and commitment to high value.

PARTNERSHIP: We work in cooperation with other care providers, guided by open communication, trust and shared decision-making.

STEWARDSHIP: We advocate prudence in the use of our financial and human resources for the advantage of the communities we serve.

Community Benefits Plan and Assessment Update

Riverside Medical Center (RMC) is pleased to submit the enclosed community benefit needs assessment and update to the Office of the Attorney General State of Illinois. Riverside is committed to improving the well-being of the communities we serve, regardless of an individual's ability to pay and has incorporated community benefit activities and programs in our strategic planning process.

In addition to the day-to-day services provided to patients, Riverside reaches beyond the walls of the medical center, and in collaboration with community partners, takes healthcare education, screenings and support services out to its primary and secondary community. Members of the management team, employees, physicians and hospital personnel serve on boards and committees of local not-for-profit organizations and are involved in regional planning efforts.

The Economic Impact of Riverside Medical Center on Kankakee County, Illinois

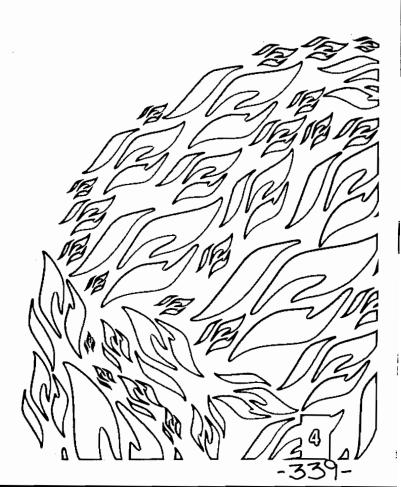

In Kankakee County and the surrounding medical service area, Riverside provides vital health care services 24 hours a day, seven days a week, 365 days a year. Riverside Medical Center occupies a prominent role as a medical provider in Kankakee County and generates significant public interest in many cutting edge medical contributions. The role Riverside plays as a major contributor to the economy, however, is often overlooked. Riverside is Kankakee County's largest employer and retains a significant-sized payroll, as a result. The purpose of this report is to specifically measure the economic impact that RMC has on Kankakee County and the surrounding medical service area.

> Riverside Medical Center is Kankakee County's largest employer

The economic impact of Riverside is presented in the table on page 5. The top portion of the table presents the employment impact of Riverside Medical Center resulting from annual operating activities.

In 2011, RMC had 1,846 full-time equivalent employees. As these employees and the medical center spent money locally, additional jobs were generated in other businesses in Kankakee County. These are called secondary jobs and are measured with employment multipliers for Kankakee County. The hospital employment multiplier is 2.01, which means that for each job established in Riverside, another 2.01 jobs were generated in other businesses in Kankakee County. In 2011, secondary jobs generated annually from operating activities of RMC were 1,864 jobs and the total employment impact was 4,128 jobs.

Riverside Medical Center spent \$44.6 million on capital improvement for capitalized building projects. The employment and income from capital improvement projects will vary each year by the types and amounts of construction activities. These expenditures were estimated to result in 215 construction jobs in 2011. These capital improvement projects resulted in secondary impacts as the construction firms and their employees spent money locally. The construction employment multiplier was 1.94 yielding a secondary employment impact of 202 jobs and a total employment impact of 417 jobs due to construction activities. In 2011, the total employment impact of Riverside on Kankakee County was 3,710 jobs from operations and 417 jobs from construction, for a total employment impact of 4,128 jobs.

The income impact of filverside for 2011 is presented in the middle portion of the table below. Income (wages, calaries and benefits) paid to fiMC employees was \$103.2 million.

Applying the hospital tracome multiplier of 1.6%, the secondary tracome impact was \$72.5 million and the total tracome impact was \$180.7 million. Construction projects patel workers an estimated \$12.8 million in tracome, which occurred only during the construction year(s). The construction tracome multiplier of 1.5% resulted in \$7.8 million in secondary tracome impact and \$20.1 million in total tracome impact from construction activities in 2011. The total tracome impact from filterated in Rankekee County in 2011 from both operating activities and construction activities was \$200.8 million.

Finally, the impact of RMC on retail sales and sales tax was estimated for 2011. From the \$200.8 million in total income impact generated from Riverside operations, retail sales are estimated at \$36.7 million, resulting in \$5.4 million in Illinois state sales taxes of 6.25 percent. From the \$20.1 million in total income impact generated from Riverside construction, retail sales are estimated at \$9.6 million, resulting in an estimated \$0.6 million in Illinois state sales taxes of 6.25 percent. When combining the total estimated retail sales from both operations and construction of \$96.4 million, using the Illinois state sales taxes of 6.25 percent, the resulting state sales taxes were estimated to be \$6.0 million.

Because sales tax rates vary by county, sales tax estimates for the counties are not included in this study. County sales tax impacts can be calculated by multiplying the estimated retail sales by the current county sales tax rate.

In summary, RMC continues to make a significant impact on the health and walfare of residents in Kankekee County, as well as a major impact on the local economy. Large madical centers such as Riverside greatly contribute to the economic development in the geographic areas in which they are located. These occur because:

- Businesses and industries locate in a reas with high quality medical facilities and educational systems.
- Retirees locate in a reasy with accessible and comprehensive health care services and law enforcements ervices.
- The health sector is a growing sector and will continue to generate more jobs.
- The health sector generally pays above average salaries and wages.

These points, along with the large amount of economic activity generated by Riverside, demonstrate that local leaders must continue to support Riverside to ensure development of economic growth and apportunities in Kenkekee County and the surrounding erea.

Continually Providing the Highest Quality Patient Care is Riverside Medical Center's Our Commitment to

Transforming Healthcare

Riverside is taking the healthcare experience to even greater heights—focusing on what matters most. With the opening of the East Tower in November 2011 came an innovative combination of advanced medical approaches, greater access to information and a progressive healing environment. Surgical patients are now cared for in one of 12 leading-edge operating suites designed and equipped for maximum efficiency and the most advanced and sophisticated surgical procedures. Image-Stream® Technology now allows for real-time consultation with physicians outside of the operating room, live video streaming and video conferencing capabilities.

The future of caring for people is here. Riverside is improving the quality of life for our patients, families and our staff. Right on the heels of the East Tower opening was the Sleep Disorder Institute with its six private sleep study suites featuring luxurious home-like surroundings. Patients can complete their sleep study, get ready in a private bathroom and continue with their day just as if they were away on business. The Sleep Disorder Institute is also equipped to handle pediatric sleep studies.

It doesn't stop there. Renovation and expansion projects are underway in the west side of the hospital and the Betty Burch Bridgewater Center for Radiation Therapy. All of this is Riverside's efforts to make great care even better.

Distinguished Hospital for Clinical Excellence

HealthGrades® named Riverside as one of its Distinguished Hospitals for Clinical Excellence. This prestigious distinction places RMC among the Top 5 percent of hospitals nationwide for clinical performance. HealthGrades® is the nation's most trusted source of health care provider information.

HealthGrades® Hospital Quality and Clinical Excellence study objectively identifies those hospitals with the best overall clinical performance across all 26 medical diagnoses and procedures that the organization rates.

"At Riverside, we strive to provide our highest thinking, our kindest touch and our strongest commitment to excellence to each patient we serve. Receiving the Distinguished Hospital for Clinical Excellence™ award means we're doing it right and I am proud of our physicians, nurses and staff," said Riverside's President and CEO Phil Kambic.

Over the years, Riverside has received multiple five-star ratings and Specialty Excellence Award distinctions from HealthGrades for many of its service areas, such as: Cardiac, Orthopedic, Neurosciences, Gastrointestinal and Critical Care. A commitment to quality outcomes coupled with specialty excellence awards and five-star ratings, contributed to Riverside receiving the Distinguished Hospital for Clinical ExcellenceTM award, according to HealthGrades®.

One of America's 100 Best Hospitals for Orthopedic Surgery

Riverside was named One of America's 100 Best Hospitals for Orthopedic Surgery by HealthGrades® for its superior patient clinical outcomes. In addition to this prestigious designation, Riverside also received Excellence Awards for Orthopedic Surgery and Joint Replacement, ranking them in the Top 10 percent in the nation.

"The Orthopedic Surgery team at Riverside is honored to be named one of the nation's best hospitals for orthopedic surgery," said Cheryl Tyson, RN and nurse manager of Riverside's Orthopedic and Neurosurgery services. "Together with the orthopedic experts at OAK Orthopedics we provide the highest quality of care and the most advanced techniques, including minimally invasive surgical procedures for hip, knee and joint replacement."

Becker's Hospital Review also recognized Riverside as one of 60 Hospitals with Great Orthopedic Programs. Riverside was selected based on particular excellence in orthopedic care, quality of service, exceptional local and national reputations and a high volume of orthopedic cases.

Community Served

Riverside serves the Illinois counties of Kankakee, Will, Iroquois, Grundy and beyond. Riverside's primary service area, Kankakee County has a population of 113,449 (2010 U.S. Census Data), and includes the communities of Bradley, Bourbonnais, Kankakee and Manteno. The racial makeup of the county is 77.6 percent White, 15.1 percent Black or African American, 9.0 percent Hispanic or Latino and 0.3 percent Native American. The median household income is \$49,375 and 15.1 percent of the population lives below the poverty line.

More than 21.4 percent of individuals living in Kankakee are below poverty level, which exceeds the State of Illinois average of 10.7 percent.¹ The racial makeup of the city is 50.9 percent White, 41.1 percent Black or African American, 9.3 percent Hispanic or Latino and 0.3 percent Native American.² The median household income is \$30,469, well below the Illinois average of \$46,590.¹

The 2010 County Well-Being Index³ placed Kankakee County on its Poverty Warning List in the 2010 County Well-Being Index report published from the U.S. Census Bureau's American Community Survey and Social IMPACT Research Center, a program of Heartland Alliance. Four key indicators of well-being are assessed in each of Illinois' 102 counties: high school graduation rates, unemployment rates, teen birth rates, and poverty rates.

Kankakee's Poverty Warning List placement elevates the county from its previous Watch status to a level requiring corrective action initiatives.

Sixty-four percent of Riverside's services are provided to the elderly and the poor—some of the area's most vulnerable citizens.

In 2011, Riverside treated 61,841 Medicaid cases⁴, many for highly complex diagnoses requiring care at significant cost. Medicare and Medicaid subsidize, but do not cover the full costs of services provided. The shortfall is made up through operating funds.

The income, employment and insurance status of residents of Kankakee County result in the hospital caring for a large number of patients who are uninsured or underinsured, or for whom public program reimbursement is inadequate to cover costs.

A very basic element of Riverside's community service is the care of this population. Charity care occurs many times through the Emergency Department.

If necessary, these patients are given follow-up care subsequent to the initial episode within our available resources.

Access to Health

Riverside has responded to the issue of access to safe, quality health care for everyone by placing employed physicians in underserved areas, recruiting new physicians, conducting health education and screenings, providing emergency and ambulance services to rural communities and offering prenatal care to underserved women.

New Life Center: Riverside's New Life Center provides routine gynecological care and obstetrics referral services to females age 12 to 54. Pregnant participants are assisted with Medicaid Presumptive Eligibility to ease the patient's access to high quality obstetric care. The New Life Center accepts patients regardless of their ability to pay and fees are based on a sliding scale. The program maintains Spanish-speaking staff to serve the Hispanic population, which is 17 percent of the client population.

Number of individuals served: 5,429

Riverside HealthCare Community Health Centers: Riverside owns and operates nine community health clinics located in Kankakee,

Bourbonnais, Manteno, Monee, Momence, Hopkins Park (Pembroke Township), Wilmington, Peotone and Coal City. The health clinics employ 34 physicians including general internists, family practitioners, pediatricians, obstetricians and gynecologists, psychiatrists, plastic surgeons and internal medicine physicians.

For the Hopkins Park, Momence and Kankakee Community Health Centers, the purpose is to extend the reach of the hospital especially to those areas with high poverty levels. According to U.S. Census information, 78 percent of the Hopkins Park population and 34 percent of city of Kankakee population were below the poverty level in 2009.9

Number of individuals served by the Hopkins Park, Momence and City of Kankakee clinics: 5,186 Unreimbursed cost: \$1,285,690

9www.city-data.com/poverty

Riverside Ambulance Services:

Riverside provides ambulance service to the primary service area from four remote locations in Momence, Kankakee, St. Anne and Ashkum. Riverside Ambulance is also responsible for 16 communities through its Emergency Medical Service System.

Number of individuals served: 4,757 (not including community events) Unreimbursed cost; \$3,599,530

Early Out Program: The Early Out Program provides a limited supply of free prescription medications to discharged patients who do not have the resources to purchase needed medications. Additionally, discharged patients who do not have transportation and cannot afford public transportation, are provided vouchers for taxi service.

Number of individuals served: 188 Unreimbursed cost: \$11,204

Healthcare Education and Training:

Riverside has collaborated with several organizations to address the nation's nursing shortage, including Olivet Nazarene University's four-year Bachelor of Science Degree, Registered Nurse Program and Kankakee Community College's Associate Degree Registered Nurse Program Licensed Practical Nurse Program. Riverside trains nursing students throughout the hospital medical-surgical, pediatrics, critical care areas, perioperative services, behavioral services, emergency services, and obstetrics/labor and delivery.

Shadowing and mentoring is also provided to local high school students and adults in any clinical or nonclinical position within the organization to assist with career changes and career planning.

Riverside is also affiliated with over 30 other institutions to advance the training of future healthcare professionals including Prairie State College's Associate Degree Registered Nurse Program and Illinois Institute of Technology Registered Nurse program, and Trinity University's graduate program in Health Care Administration. In addition, affiliation experiences provided include: physical therapy, occupational therapy, lab, radiology, social work, medical assisting and dietetics.

Riverside has worked to develop an outstanding nursing staff, and we realize the medical environment does not stand still. There is always new knowledge to acquire. New technology to learn. New techniques to assimilate. A more highly educated nursing staff results in a better patient experience. To this end, the Riverside Foundation has

The following physicians were appointed to the Riverside Medical Center medical associate staff in 2011:

	Ahsan Basha, M.D	Internal Medicine 2/22/11

developed a Nursing Excellence program to assist nursing staff to work toward their advanced degrees. Annual scholarships are also provided to community members and Riverside employees to further their college education in nursing and physical therapy.

Number of students served: 479
Unreimbursed cost: \$514,629

Recruitment of Physicians: Recruitment of physicians for the community is critical to meet the projected need due to growth, the aging population and expected retirement of current physicians. Riverside conducted a study to determine the projected deficit of physicians by specialty in the community.

Current strategic direction is to recruit physicians to the service area, even if it is necessary to employ them directly.

The following physicians were appointed to the Riverside Medical Center medical consulting staff in 2011:

Lillian Cavin, M.D	Radiology 3/29/11
Stacy McFaul, M.D	Radiology 4/26/11

In addition to the main hospital fadility in Kankakee, Riverside operates the Resolve-Center in Manteno, Illinois, which houses an 18-bad framed residential substance abuse program for adolescent boys and associated outpatient services. The program is designed to meet the personal needs of each patient using treatment plans tailored to each individual's situation. The patient's family is also emphasized, as their needs are then individually after a simple of the content of the cont

Riverside has long attented importance to preventing disease and detecting it early, especially when there is the chance for cure. Outlined below are a few of Riverside's numerous prevention and wellness programs.

Riverside provides regular, early accessible screenings in order to find disease in its early stages and to fadilitate disease management by the individual. Screenings target condition (heart, disbates, center, etc.) and reach out

into the community through health fairs and at the workplace. Emphasis is placed on diabetes, cardiovascular disease and women's health.

to 2001, RMC held two of its largest community health education events: Heartfest and Diabetes Wallness Fair. Riverside's events provide free screenings, wallness demonstrations, educational booths and physidem lectures to help educate, raise awareness and prevent key health concerns in the community.

Riverside's Emergency Management Program:

Riverside's Emergency Management program is designed to assure appropriate, effective response to a variety of emergency situations that could affect the safety of patients, staff, and visitors, or the environment of Riverside or adversely impact upon the hospital's ability to provide healthcare services to the community.

The Emergency Operation Plan addresses four phases of emergency activities: mitigation, preparedness, response, and recovery.

The Emergency Management Committee is responsible for all phases of emergency response as well as the Emergency Operations Plan. Representatives from the hospital are involved in local and regional preparedness activities with community partners.

The hospital activated the Emergency Operations Plan and Command Center in response to several real emergencies in 2011. Approximately 166 staff were sheltered in place during a snow blizzard on February 1, 2011. Disaster cots and supplies were deployed to accommodate staff sleeping overnight.

Tornadoes are identified as a priority risk for our community. There were three tornado sightings in 2011. Additional mitigation procedures implemented at Riverside including mounting "Severe Weather Shelter Area" signs in designated safe locations throughout the facility. NOAA weather radios were also purchased for hospital owned off-site facilities.

Multiple emergency preparedness training sessions were conducted for staff in 2011. Due to the proximity of the Braidwood Nuclear Power Plant, Riverside makes staff available for Radiation training provided by the Illinois Emergency Management agency every other year. A radiation

exercise was conducted on September 27, 2012. Hazmat training was also conducted twice in 2011 for the Hazmat Team members. Riverside staff also participated in several statewide disaster exercises, including a mass fatality, earthquake, and pediatric exercise. Staff also participated in a County Mass Casualty Tabletop exercise.

New evacuation paraslydes were purchased for the East Tower and staff received training. Two additional radio repeaters and a Starcom radio were also purchased to further enhance interoperable communication capabilities and compliance with new Federal Communication Commission regulations.

Resources allocated: \$35.698

Disease Management

Riverside believes that with proper treatment, people can live productive, fulfilling lives even with heart disease, cancer and other chronic illnesses. They help patients to understand and manage the symptoms of chronic illnesses, and have an array of services that monitor and treat illnesses, while also helping to build skills and behavior to support a balanced, healthy lifestyle.

Rush-Riverside Cancer Institute:

Riverside established the Rush-Riverside Cancer Institute in collaboration with Rush University Medical Center. In 2004, the Medical Center opened the Betty Burch Bridgewater Center for Radiation Therapy, a freestanding radiation treatment facility located Riverside's Bourbonnais Campus and expanded its oncology center into approximately 6,000 square feet of space in the Pavilion, a 115,000-square-foot integrated medical facility located on Riverside's Bourbonnais Campus.

The program addresses the high cancer death rate of Kankakee County residents. According to the preliminary analysis of community health needs conducted by the University of Illinois College of Medicine at Rockford, ageadjusted cancer deaths per 100,000 standardpopulation exceed the national average by 219.8 to 190.1 deaths.

The cancer center's free cancer resource library is available at both locations, in Kankakee and Bourbonnais. The library consists of information, books and videos and has convenient computer access for members of the community looking for information.

Number of individuals served: 16,838

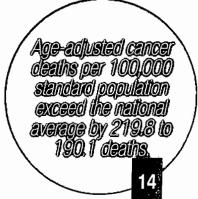

Rush-Riverside Heart Center:

Cardiovascular disease was the cause of 38 percent of all deaths in Kankakee County in 2002.11 To meet this critical need in the community, Riverside opened the Rush-Riverside Heart Center in November 1999 to provide a full of cardiac spectrum diagnosis, services—prevention, treatment and rehabilitation. Kankakee County residents now rarely need to travel to Chicago or other cities for open-heart surgery or catheterizations.

Preliminary analysis of community health needs conducted by the University of Illinois College of Medicine at Rockford, shows that age-adjusted deaths due to heart disease per 100,000 standard population exceed the national average by 299.5 to 232.3 deaths.

Number of individuals served: 2,003

11Riverside Medical Center

Charity Care and Collection Practices Guidelines for Charity Patients

Riverside promoted healthier communities in several ways for the broader community by:

- Offering or partnering with other community agencies to provide free support groups (including free meeting space) for persons needing support. Agencies include United Way, Alzheimer's Association, Lion's Board, Parkinson's Support Group, Gambler's Anonymous, Harbor House, Epilepsy Support Group, GROW and several others.
- Sponsoring numerous events or providing cash contributions to community agencies such as: American Cancer Society Relay for Life, Kankakee Little League, Kankakee Sponsor a Child, Options, Kankakee County Training Center, American Red Cross, YMCA, Habitat for Humanity, Hospice of Kankakee, Kankakee County Drug Free and others.
- Contributing expertise and time of senior and middle management staff to assist community agencies, committees, boards and advisory councils.
- Hosting wellness classes and presentations about such topics as nutrition, women's health issues and others; provided flu vaccines at a nominal charge.
- Providing physicians and community residents free reference materials from Riverside's libraries.
- Participating in community walkathons and marathons to raise money for breast cancer, heart disease research, United Way and others by providing funding and staff resources.
- Providing staffing, ambulance service and first aid to several community events, such as: Pembroke Rodeo, Good Shepherd Manor Fest, St. Anne Pumpkin Fest, Kankakee River Valley Regatta, Ashkum Homecoming, Momence Glad Fest, Kankakee County Fair, Chicago Bears Training Camp and other community events.

Charity Care for Hospital Responsibilities

Riverside uses a sliding scale, application process, and credit report to evaluate and determine a patient's eligibility for financial assistance. Charity care will be available for medically necessary hospital care provided to persons who meet the financial and documentation criteria defined. Each situation will be reviewed independently and allowances will be made for extenuating circumstances based on good faith efforts and mitigating factors.

Riverside uses various tools to communicate the availability of charity care to all patients. Examples include:

- Signage
- Brochures
- Placing a note on the back of the hospital bill and statements regarding how to request information about financial assistance
- Designated individuals who can explain the hospital's charity care policy, including a Spanish-speaking representative.
- Reference in our Patient Handbook

Staff in the hospital's patient financial services and registration departments understand the hospital's charity care policy and are able to direct questions regarding the policy to the proper hospital representative. Hospital staff who regularly interact with patients will know that the hospital has a charity care policy and be able to direct questions regarding the policy to the proper hospital representative.

A patient will receive a full (100 percent) discount if he or she can demonstrate family income at or below 135 percent of federal poverty guidelines, subject to income verification processes of the hospital and other hospital charity care eligibility requirements. A partial discount will be offered if an individual's family income is greater than 135 percent but equal to or less than 300 percent of federal poverty guidelines, and the person meets other charity care eligibility requirements.

In determining whether a patient meets the eligibility criteria for charity care, Riverside may consider the extent to which the person has assets other than income that could be used to meet his or her financial obligation.

After receiving the patient's request for financial assistance and any financial information or other documentation needed to determine eligibility for charity care, the hospital will notify the patient of its eligibility determination within a reasonable period of time. The hospital will also advise the patient of his or her responsibilities under these charity care guidelines.

The hospital's use of federal poverty guidelines will be updated annually in conjunction with the federal poverty guideline updates published by the United States Department of Health and Human Services.

Charity Care for Patient Responsibilities

To be considered for a discount under the charity care policy, a person must cooperate with the hospital to provide the information and documentation necessary to apply for other existing financial resources that may be available to pay for his or her health care, such as Medicare, Medicaid, KidCare, third-party liability, etc.

To be considered for a discount under the charity care policy, a person must provide the hospital with financial and other information needed to determine eligibility.

A request for financial assistance under this policy must be made by or on behalf of the patient. Patients may apply for, and will be encouraged to apply for, financial assistance before, during or within a reasonable time after hospital care is provided. In the event they do not initially qualify for financial assistance after providing the requested information and documentation, patients may re-apply if there is a change in their income, assets, or family size responsibility.

A patient who qualifies for a partial discount must cooperate with the hospital to establish a reasonable payment plan, which takes into account available income and assets, the amount of the discounted bill(s), and any prior payments.

Patients who qualify for partial discounts must make a good faith effort to honor the payment plans for their discounted hospital bills. They are responsible for communicating to the hospital any change in their financial situation that may impact their ability to pay their discounted hospital bills or to honor the provisions of their payment plans.

Collection Practices Guidelines for Charity Patients

When a patient has been approved under the hospital's charity care policy for a partial discount, the hospital will work with the patient or responsible party to establish a reasonable payment plan, which takes into account available income and assets, the amount of the discounted bill(s), and any prior payments. The hospital will also advise the patient of his or her responsibilities under these collection practices guidelines.

Riverside may offer prompt payment discounts to charity care patients who are eligible for partial discounts on their hospital bills.

The hospital will not pursue legal action for non-payment of bills against charity care patients who have clearly demonstrated that they have neither sufficient income nor assets to meet their financial obligations.

The hospital will not place a lien on a charity care patient's primary residence if this is the patient's sole real asset unless the value of the property clearly indicates an ability to assume significant financial obligations. The hospital will not execute a lien by forcing the sale or foreclosure of a charity care patient's primary residence to pay for an outstanding medical bill.

The hospital will not use body attachment to require the charity care patient or responsible party to appear in court.

The hospital will ensure that the guidelines outlined above are followed by any external collection agency engaged to assist in obtaining payment on outstanding bills from charity care patients.

To receive favorable treatment under the collection practices described above, the patient must have qualified for a partial discount under the hospital's charity care policy by having provided the financial information and other documentation needed to determine eligibility for such a discount.

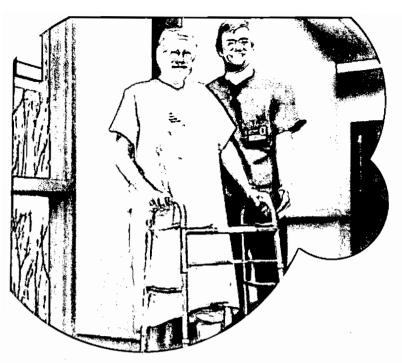

To receive favorable treatment under the collection practices described above, charity care patients or their responsible parties must cooperate with the hospital to establish a reasonable payment plan, which takes into account available income and assets, the amount of the discounted bill(s), and any prior payments.

To receive favorable treatment under the collection practices described above, charity care patients must make a good faith effort to honor the payment plans for their discounted hospital bills. They are responsible for communicating to the hospital any change in their financial situation that may impact their ability to pay their discounted hospital bills or to honor the provisions of their payment plans.

RIVERSIDE Medical Center

History and Background

Riverside HealthCare is a comprehensive healthcare delivery system based in Kankakee, which is located approximately 55 miles south of downtown Chicago. Riverside follows the Community Benefit Reporting Guidelines and Standard Definitions for the Community Benefit Inventory for Social Accountability jointly produced by Catholic Health Association of the United States (CHA), VHA Inc., and Lyons Software when creating its Community Benefit Plan and Report Card.

The system traces its roots to the founding of Riverside Hospital, now Riverside Medical Center, in 1959. Riverside opened its doors in 1964. It is licensed for 325 beds, of which 238 beds are currently staffed. Riverside continued to grow and expand its scope of services and market presence in the late 1980s with the creation of Riverside Senior Living, which today provides a full continuum of care for seniors—independent living, assisted living, and skilled and intermediate nursing care.

In the 1990s, expansion continued with the creation of outpatient, primary care clinics and ancillary and wellness services and evolved from a rural community hospital to a regional healthcare delivery system.

In 1996, Riverside Medical Center entered into an affiliation with Rush University Medical Center (Rush). The objective of the affiliation was to differentiate Riverside clinically, through

the development of new clinical programs and the expansion of existing programs. As a part of the affiliation, Riverside established the Rush-Riverside Heart Center and the Rush-Riverside Cancer Institute.

Riverside Medical Center opened a comprehensive ambulatory center composed of radiological services, a women's center, a surgery center and medical office space on its Bourbonnais Campus in 2005. Additionally, Riverside HealthCare operates a 70,000-square-foot health fitness center at this location.

Riverside HealthCare's Oakside Corporation, established in 1982, provides a comprehensive outreach counseling program in Kankakee and Wilmington, as well as a pharmacy, healthcare equipment sales and leasing and home health services.

In 2011, Riverside Medical Center completed its East Tower creating 12 integrated operating rooms, seven richly appointed labor, delivery and recovery rooms, one dedicated C-section operating room, 18 high-tech private ICU rooms, 24 family-centered private patient rooms and additional support space. The Riverside Medical Center FastCare clinic opened, serving patients 364 days a year. RMC also opened the Sleep Disorder Institute with six luxurious private rooms, including a pediatric sleep study room.
