ILLINOIS HEALTH FACILITIES AND SERVICES REVIEW BOARD
APPLICATION FOR PERMIT

RECEIVED

SECTION I. IDENTIFICATION, GENERAL INFORMATION, AND CERTIFICATION NOV 21 2012

This Section must be completed for all projects.

HEALTH FACILITIES &
SERVICES REVIEW BOARD

Facility/Project Identification

Facility Name: Markham Renal Center		
Street Address: 4215 West 167th Street		
City and Zip Code: Country Club Hills, Illinois 60478		
County: Cook	Health Service Area: 007	Health Planning Area:

Applicant /Co-Applicant Identification

[Provide for each co-applicant [refer to Part 1130.220].

Exact Legal Name: ISD Renal, Inc.	
Address: 2000 16 th Street, Denver, CO 80202	
Name of Registered Agent: Illinois Corporation Service Company	
Name of Chief Executive Officer: Kent Thiry	
CEO Address: 2000 16 th Street, Denver, CO 80202	
Telephone Number: (303) 405-2100	

Type of Ownership of Applicant/Co-Applicant

☐ Non-profit Corporation	☐ Partnership
☒ For-profit Corporation	☐ Governmental
☐ Limited Liability Company	☐ Sole Proprietorship ☐ Other
- Corporations and limited liability companies must provide an Illinois certificate of good standing. - Partnerships must provide the name of the state in which organized and the name and address of each partner specifying whether each is a general or limited partner.	
APPEND DOCUMENTATION AS ATTACHMENT 1 IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.	

Primary Contact

[Person to receive all correspondence or inquiries during the review period]

Name: Kara Friedman
Title: Attorney
Company Name: Polsinelli Shughart PC
Address: 161 North Clark Street, Suite 4200, Chicago, Illinois 60601
Telephone Number: 312-873-3639
E-mail Address: kfriedman@polsinelli.com
Fax Number:

Additional Contact

[Person who is also authorized to discuss the application for permit]

Name: Ronny Philip
Title: Regional Operations Director
Company Name: DaVita HealthCare Partners Inc.
Address: 8109 South Western Avenue, Chicago, Illinois 60620
Telephone Number: 773-778-0173
E-mail Address: ronny.philip@davita.com
Fax Number: 855-871-6348

E-mail Address: timothy.tincknell@davita.com
Fax Number: 866-586-3214

Site Ownership

[Provide this information for each applicable site]

Exact Legal Name of Site Owner: Stenstrom Companies LTD
Address of Site Owner: 2420 20 th Street, Rockford, IL 61104
Street Address or Legal Description of Site: 4215 West 167th Street, Country Club Hills, Illinois 60478.
Lot 2 of the Plat of Gatling Country Club Hills Resubdivision, being a resubdivision of Lots 1,2,3 and 4 of the Gatling Country Club Hills Subdivision
Proof of ownership or control of the site is to be provided as Attachment 2. Examples of proof of ownership are property tax statement, tax assessor's documentation, deed, notarized statement of the corporation attesting to ownership, an option to lease, a letter of intent to lease or a lease.
APPEND DOCUMENTATION AS ATTACHMENT-2, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Operating Identity/Licensee

[Provide this information for each applicable facility, and insert after this page.]

Exact Legal Name: ISD Renal, Inc.	
Address: 2000 16 th Street, Denver, CO 80202	
☐ Non-profit Corporation	☐ Partnership
☒ For-profit Corporation	☐ Governmental
☐ Limited Liability Company	☐ Sole Proprietorship ☐ Other
- o Corporations and limited liability companies must provide an Illinois Certificate of Good Standing. - o Partnerships must provide the name of the state in which organized and the name and address of each partner specifying whether each is a general or limited partner. - o Persons with 5 percent or greater interest in the licensee must be identified with the % of ownership.	
APPEND DOCUMENTATION AS ATTACHMENT-3, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.	

Organizational Relationships

Provide (for each co-applicant) an organizational chart containing the name and relationship of any person or entity who is related (as defined in Part 1130.140). If the related person or entity is participating in the development or funding of the project, describe the interest and the amount and type of any financial contribution.

APPEND DOCUMENTATION AS ATTACHMENT-4, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Flood Plain Requirements

[Refer to application instructions.]

Provide documentation that the project complies with the requirements of Illinois Executive Order #2005-5 pertaining to construction activities in special flood hazard areas. As part of the flood plain requirements please provide a map of the proposed project location showing any identified floodplain areas. Floodplain maps can be printed at www.FEMA.gov or www.illinoisfloodmaps.org. **This map must be in a readable format.** In addition please provide a statement attesting that the project complies with the requirements of Illinois Executive Order #2005-5 (<http://www.hfsrb.illinois.gov>).

APPEND DOCUMENTATION AS **ATTACHMENT -5** IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Historic Resources Preservation Act Requirements

[Refer to application instructions.]

Provide documentation regarding compliance with the requirements of the Historic Resources Preservation Act.

APPEND DOCUMENTATION AS **ATTACHMENT-6** IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

DESCRIPTION OF PROJECT**1. Project Classification**

[Check those applicable - refer to Part 1110.40 and Part 1120.20(b)]

Part 1110 Classification: ☒ Substantive ☐ Non-substantive	Part 1120 Applicability or Classification: [Check one only.] ☐ Part 1120 Not Applicable ☐ Category A Project ☒ Category B Project ☐ DHS or DVA Project

2. Narrative Description

Provide in the space below, a brief narrative description of the project. Explain **WHAT** is to be done in **State Board defined terms**, **NOT WHY** it is being done. If the project site does **NOT** have a street address, include a legal description of the site. Include the rationale regarding the project's classification as substantive or non-substantive.

Based on operational limitations at the current site, DaVita HealthCare Partners Inc. and ISD Renal, Inc. (the "Applicants") seek authority from the Illinois Health Facilities and Services Review Board (the "Board") to relocate their existing 24-station dialysis facility to 4215 West 167th Street, Country Club Hills, IL 60478 (the "Replacement Facility"). The proposed dialysis facility will include approximately 9,776 gross square feet.

This project has been classified as substantive because it involves the establishment of a health care facility.

Project Costs and Sources of Funds

Complete the following table listing all costs (refer to Part 1120.110) associated with the project. When a project or any component of a project is to be accomplished by lease, donation, gift, or other means, the fair market or dollar value (refer to Part 1130.140) of the component must be included in the estimated project cost. If the project contains non-reviewable components that are not related to the provision of health care, complete the second column of the table below. Note, the use and sources of funds must equal.

Project Costs and Sources of Funds			
USE OF FUNDS	CLINICAL	NONCLINICAL	TOTAL
Preplanning Costs			
Site Survey and Soil Investigation			
Site Preparation			
Off Site Work			
New Construction Contracts	\$1,310,000		\$1,310,000
Modernization Contracts			
Contingencies	\$130,000		\$130,000
Architectural/Engineering Fees	\$82,368		\$82,368
Consulting and Other Fees	\$58,000		\$58,000
Movable or Other Equipment (not in construction contracts)	\$355,299		\$355,299
Bond Issuance Expense (project related)			
Net Interest Expense During Construction (project related)			
Fair Market Value of Leased Space or Equipment	\$2,074,391		\$2,074,391
Other Costs To Be Capitalized			
Acquisition of Building or Other Property (excluding land)			
TOTAL USES OF FUNDS			
SOURCE OF FUNDS	CLINICAL	NONCLINICAL	TOTAL
Cash and Securities	\$1,935,667		\$1,935,667
Pledges			
Gifts and Bequests			
Bond Issues (project related)			
Mortgages			
Leases (fair market value)	\$2,074,391		\$2,074,391
Governmental Appropriations			
Grants			
Other Funds and Sources			
TOTAL SOURCES OF FUNDS	\$4,010,058		\$4,010,058
NOTE: ITEMIZATION OF EACH LINE ITEM MUST BE PROVIDED AT ATTACHMENT-7, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.			

Related Project Costs

Provide the following information, as applicable, with respect to any land related to the project that will be or has been acquired during the last two calendar years:

Land acquisition is related to project ☐ Yes ☒ No
Purchase Price: \$ _____
Fair Market Value: \$ _____

The project involves the establishment of a new facility or a new category of service
☐ Yes ☒ No

If yes, provide the dollar amount of all **non-capitalized** operating start-up costs (including operating deficits) through the first full fiscal year when the project achieves or exceeds the target utilization specified in Part 1100.

Estimated start-up costs and operating deficit cost is \$0 _____.

Project Status and Completion Schedules

Indicate the stage of the project's architectural drawings:

☐ None or not applicable ☐ Preliminary
☒ Schematics ☐ Final Working

Anticipated project completion date (refer to Part 1130.140): June 30, 2015

Indicate the following with respect to project expenditures or to obligation (refer to Part 1130.140):

- ☐ Purchase orders, leases or contracts pertaining to the project have been executed.
☒ Project obligation is contingent upon permit issuance. Provide a copy of the contingent "certification of obligation" document, highlighting any language related to CON Contingencies
☐ Project obligation will occur after permit issuance.

APPEND DOCUMENTATION AS ATTACHMENT-8, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

State Agency Submittals

Are the following submittals up to date as applicable:

- ☐ Cancer Registry **NOT APPLICABLE**
☐ APORS **NOT APPLICABLE**
☒ All formal document requests such as IDPH Questionnaires and Annual Bed Reports been submitted
☒ All reports regarding outstanding permits

Failure to be up to date with these requirements will result in the application for permit being deemed incomplete.

Cost Space Requirements

Provide in the following format, the department/area **DGSF** or the building/area **BGSF** and cost. The type of gross square footage either **DGSF** or **BGSF** must be identified. The sum of the department costs **MUST** equal the total estimated project costs. Indicate if any space is being reallocated for a different purpose. Include outside wall measurements plus the department's or area's portion of the surrounding circulation space. **Explain the use of any vacated space.**

Dept. / Area	Cost	Gross Square Feet		Amount of Proposed Total Gross Square Feet That Is:			
		Existing	Proposed	New Const.	Modernized	As Is	Vacated Space
REVIEWABLE							
Medical Surgical							
Intensive Care							
Diagnostic Radiology							
MRI							
Total Clinical							
NON REVIEWABLE							
Administrative							
Parking							
Gift Shop							
Total Non-clinical							
TOTAL							

APPEND DOCUMENTATION AS ATTACHMENT 9, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

Facility Bed Capacity and Utilization

Complete the following chart, as applicable. Complete a separate chart for each facility that is a part of the project and insert following this page. Provide the existing bed capacity and utilization data for the latest **Calendar Year for which the data are available**. Include **observation days in the patient day totals for each bed service**. Any bed capacity discrepancy from the Inventory will result in the application being deemed **incomplete**.

FACILITY NAME:		CITY:			
REPORTING PERIOD DATES:					
		From:		to:	
Category of Service	Authorized Beds	Admissions	Patient Days	Bed Changes	Proposed Beds
Medical/Surgical					
Obstetrics					
Pediatrics					
Intensive Care

TOTALS:					

CERTIFICATION

The application must be signed by the authorized representative(s) of the applicant entity. The authorized representative(s) are:

- in the case of a corporation, any two of its officers or members of its Board of Directors;
- in the case of a limited liability company, any two of its managers or members (or the sole manager or member when two or more managers or members do not exist);
- in the case of a partnership, two of its general partners (or the sole general partner, when two or more general partners do not exist);
- in the case of estates and trusts, two of its beneficiaries (or the sole beneficiary when two or more beneficiaries do not exist); and
- in the case of a sole proprietor, the individual that is the proprietor.

This Application for Permit is filed on the behalf of DaVita HealthCare Partners Inc. * in accordance with the requirements and procedures of the Illinois Health Facilities Planning Act. The undersigned certifies that he or she has the authority to execute and file this application for permit on behalf of the applicant entity. The undersigned further certifies that the data and information provided herein, and appended hereto, are complete and correct to the best of his or her knowledge and belief. The undersigned also certifies that the permit application fee required for this application is sent herewith or will be paid upon request.

SECTION II. DISCONTINUATION

This Section is applicable to any project that involves discontinuation of a health care facility or a category of service. **NOTE:** If the project is solely for discontinuation and if there is no project cost, the remaining Sections of the application are not applicable.

Criterion 1110.130 - Discontinuation

READ THE REVIEW CRITERION and provide the following information:

GENERAL INFORMATION REQUIREMENTS

1. Identify the categories of service and the number of beds, if any that is to be discontinued.
2. Identify all of the other clinical services that are to be discontinued.
3. Provide the anticipated date of discontinuation for each identified service or for the entire facility.
4. Provide the anticipated use of the physical plant and equipment after the discontinuation occurs.
5. Provide the anticipated disposition and location of all medical records pertaining to the services being discontinued, and the length of time the records will be maintained.
6. For applications involving the discontinuation of an entire facility, certification by an authorized representative that all questionnaires and data required by HFSRB or DPH (e.g., annual questionnaires, capital expenditures surveys, etc.) will be provided through the date of discontinuation, and that the required information will be submitted no later than 60 days following the date of discontinuation.

REASONS FOR DISCONTINUATION

The applicant shall state the reasons for discontinuation and provide data that verifies the need for the proposed action. See criterion 1110.130(b) for examples.

IMPACT ON ACCESS

1. Document that the discontinuation of each service or of the entire facility will not have an adverse effect upon access to care for residents of the facility's market area.
2. Document that a written request for an impact statement was received by all existing or approved health care facilities (that provide the same services as those being discontinued) located within 45 minutes travel time of the applicant facility.
3. Provide copies of impact statements received from other resources or health care facilities located within 45 minutes travel time, that indicate the extent to which the applicant's workload will be absorbed without conditions, limitations or discrimination.

APPEND DOCUMENTATION AS ATTACHMENT 10, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

SECTION III – BACKGROUND, PURPOSE OF THE PROJECT, AND ALTERNATIVES - INFORMATION REQUIREMENTS

This Section is applicable to all projects except those that are solely for discontinuation with no project costs.

Criterion 1110.230 – Background, Purpose of the Project, and Alternatives

READ THE REVIEW CRITERION and provide the following required information:

BACKGROUND OF APPLICANT

1. A listing of all health care facilities owned or operated by the applicant, including licensing, and certification if applicable.
2. A certified listing of any adverse action taken against any facility owned and/or operated by the applicant during the three years prior to the filing of the application.
3. Authorization permitting HFSRB and DPH access to any documents necessary to verify the information submitted, including, but not limited to: official records of DPH or other State agencies; the licensing or certification records of other states, when applicable; and the records of nationally recognized accreditation organizations. **Failure to provide such authorization shall constitute an abandonment or withdrawal of the application without any further action by HFSRB.**
4. If, during a given calendar year, an applicant submits more than one application for permit, the documentation provided with the prior applications may be utilized to fulfill the information requirements of this criterion. In such instances, the applicant shall attest the information has been previously provided, cite the project number of the prior application, and certify that no changes have occurred regarding the information that has been previously provided. The applicant is able to submit amendments to previously submitted information, as needed, to update and/or clarify data.

APPEND DOCUMENTATION AS ATTACHMENT-11, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM. EACH ITEM (1-4) MUST BE IDENTIFIED IN ATTACHMENT 11.

PURPOSE OF PROJECT

1. Document that the project will provide health services that improve the health care or well-being of the market area population to be served.
2. Define the planning area or market area, or other, per the applicant's definition.
3. Identify the existing problems or issues that need to be addressed, as applicable and appropriate for the project. [See 1110.230(b) for examples of documentation.]
4. Cite the sources of the information provided as documentation.
5. Detail how the project will address or improve the previously referenced issues, as well as the population's health status and well-being.
6. Provide goals with quantified and measurable objectives, with specific timeframes that relate to achieving the stated goals **as appropriate.**

For projects involving modernization, describe the conditions being upgraded if any. For facility projects, include statements of age and condition and regulatory citations if any. For equipment being replaced, include repair and maintenance records.

NOTE: Information regarding the "Purpose of the Project" will be included in the State Agency Report.

APPEND DOCUMENTATION AS ATTACHMENT-12, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM. EACH ITEM (1-6) MUST BE IDENTIFIED IN ATTACHMENT 12.

ALTERNATIVES

- 1) Identify **ALL** of the alternatives to the proposed project:

Alternative options **must** include:

- A) Proposing a project of greater or lesser scope and cost;
 - B) Pursuing a joint venture or similar arrangement with one or more providers or entities to meet all or a portion of the project's intended purposes; developing alternative settings to meet all or a portion of the project's intended purposes;
 - C) Utilizing other health care resources that are available to serve all or a portion of the population proposed to be served by the project; and
 - D) Provide the reasons why the chosen alternative was selected.
- 2) Documentation shall consist of a comparison of the project to alternative options. The comparison shall address issues of total costs, patient access, quality and financial benefits in both the short term (within one to three years after project completion) and long term. This may vary by project or situation. **FOR EVERY ALTERNATIVE IDENTIFIED THE TOTAL PROJECT COST AND THE REASONS WHY THE ALTERNATIVE WAS REJECTED MUST BE PROVIDED.**
- 3) The applicant shall provide empirical evidence, including quantified outcome data that verifies improved quality of care, as available.

APPEND DOCUMENTATION AS ATTACHMENT-13, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

SECTION IV - PROJECT SCOPE, UTILIZATION, AND UNFINISHED/SHELL SPACE**Criterion 1110.234 - Project Scope, Utilization, and Unfinished/Shell Space**

READ THE REVIEW CRITERION and provide the following information:

SIZE OF PROJECT:

1. Document that the amount of physical space proposed for the proposed project is necessary and not excessive. **This must be a narrative.**
2. If the gross square footage exceeds the BGSF/DGSF standards in Appendix B, justify the discrepancy by documenting one of the following::
 - a. Additional space is needed due to the scope of services provided, justified by clinical or operational needs, as supported by published data or studies;
 - b. The existing facility's physical configuration has constraints or impediments and requires an architectural design that results in a size exceeding the standards of Appendix B;
 - c. The project involves the conversion of existing space that results in excess square footage.

Provide a narrative for any discrepancies from the State Standard. A table must be provided in the following format with Attachment 14.

SIZE OF PROJECT				
DEPARTMENT/SERVICE	PROPOSED BGSF/DGSF	STATE STANDARD	DIFFERENCE	MET STANDARD?

APPEND DOCUMENTATION AS ATTACHMENT-14, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

PROJECT SERVICES UTILIZATION:

This criterion is applicable only to projects or portions of projects that involve services, functions or equipment for which HFSRB has established utilization standards or occupancy targets in 77 Ill. Adm. Code 1100.

Document that in the second year of operation, the annual utilization of the service or equipment shall meet or exceed the utilization standards specified in 1110.Appendix B. A narrative of the rationale that supports the projections must be provided.

A table must be provided in the following format with Attachment 15.

UTILIZATION					
	DEPT./ SERVICE	HISTORICAL UTILIZATION (PATIENT DAYS) (TREATMENTS) ETC.	PROJECTED UTILIZATION	STATE STANDARD	MET STANDARD?
YEAR 1					
YEAR 2					

APPEND DOCUMENTATION AS ATTACHMENT-15, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

UNFINISHED OR SHELL SPACE:

Provide the following information:

1. Total gross square footage of the proposed shell space;
2. The anticipated use of the shell space, specifying the proposed GSF to be allocated to each department, area or function;
3. Evidence that the shell space is being constructed due to
 - a. Requirements of governmental or certification agencies; or
 - b. Experienced increases in the historical occupancy or utilization of those areas proposed to occupy the shell space.
4. Provide:
 - a. Historical utilization for the area for the latest five-year period for which data are available; and
 - b. Based upon the average annual percentage increase for that period, projections of future utilization of the area through the anticipated date when the shell space will be placed into operation.

APPEND DOCUMENTATION AS **ATTACHMENT-16**, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

ASSURANCES:

Submit the following:

1. Verification that the applicant will submit to HFSRB a CON application to develop and utilize the shell space, regardless of the capital thresholds in effect at the time or the categories of service involved.
2. The estimated date by which the subsequent CON application (to develop and utilize the subject shell space) will be submitted; and
3. The anticipated date when the shell space will be completed and placed into operation.

APPEND DOCUMENTATION AS **ATTACHMENT-17**, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

G. Criterion 1110.1430 - In-Center Hemodialysis

1. Applicants proposing to establish, expand and/or modernize In-Center Hemodialysis must submit the following information:
2. Indicate station capacity changes by Service: Indicate # of stations changed by action(s):

Category of Service	# Existing Stations	# Proposed Stations
☒ In-Center Hemodialysis	24	24

3. READ the applicable review criteria outlined below and submit the required documentation for the criteria:

APPLICABLE REVIEW CRITERIA	Establish	Expand	Modernize
1110.1430(b)(1) - Planning Area Need - 77 Ill. Adm. Code 1100 (formula calculation)	X		
1110.1430(b)(2) - Planning Area Need - Service to Planning Area Residents	X	X	
1110.1430(b)(3) - Planning Area Need - Service Demand - Establishment of Category of Service	X		
1110.1430(b)(4) - Planning Area Need - Service Demand - Expansion of Existing Category of Service		X	
1110.1430(b)(5) - Planning Area Need - Service Accessibility	X		
1110.1430(c)(1) - Unnecessary Duplication of Services	X		
1110.1430(c)(2) - Maldistribution	X		
1110.1430(c)(3) - Impact of Project on Other Area Providers	X		
1110.1430(d)(1) - Deteriorated Facilities			X

APPEND DOCUMENTATION AS ATTACHMENT 26, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

4. Projects for relocation of a facility from one location in a planning area to another in the same planning area must address the requirements listed in subsection (a)(1) for the "Establishment of Services or Facilities", as well as the requirements in Section 1110.130 - "Discontinuation" and subsection 1110.1430(i) - "Relocation of Facilities".

The following Sections **DO NOT** need to be addressed by the applicants or co-applicants responsible for funding or guaranteeing the funding of the project if the applicant has a bond rating of A- or better from Fitch's or Standard and Poor's rating agencies, or A3 or better from Moody's (the rating shall be affirmed within the latest 18 month period prior to the submittal of the application):

- Section 1120.120 Availability of Funds – Review Criteria
- Section 1120.130 Financial Viability – Review Criteria
- Section 1120.140 Economic Feasibility – Review Criteria, subsection (a)

VIII. - 1120.120 - Availability of Funds

The applicant shall document that financial resources shall be available and be equal to or exceed the estimated total project cost plus any related project costs by providing evidence of sufficient financial resources from the following sources, as applicable: Indicate the dollar amount to be provided from the following sources:

\$1,935,667	a) Cash and Securities – statements (e.g., audited financial statements, letters from financial institutions, board resolutions) as to: 1) the amount of cash and securities available for the project, including the identification of any security, its value and availability of such funds; and 2) interest to be earned on depreciation account funds or to be earned on any asset from the date of applicant's submission through project completion;
_____	b) Pledges – for anticipated pledges, a summary of the anticipated pledges showing anticipated receipts and discounted value, estimated time table of gross receipts and related fundraising expenses, and a discussion of past fundraising experience.
_____	c) Gifts and Bequests – verification of the dollar amount, identification of any conditions of use, and the estimated time table of receipts;
\$2,074,391 (FMV of Lease)	d) Debt – a statement of the estimated terms and conditions (including the debt time period, variable or permanent interest rates over the debt time period, and the anticipated repayment schedule) for any interim and for the permanent financing proposed to fund the project, including: 1) For general obligation bonds, proof of passage of the required referendum or evidence that the governmental unit has the authority to issue the bonds and evidence of the dollar amount of the issue, including any discounting anticipated; 2) For revenue bonds, proof of the feasibility of securing the specified amount and interest rate; 3) For mortgages, a letter from the prospective lender attesting to the expectation of making the loan in the amount and time indicated, including the anticipated interest rate and any conditions associated with the mortgage, such as, but not limited to, adjustable interest rates, balloon payments, etc.; 4) For any lease, a copy of the lease, including all the terms and conditions, including any purchase options, any capital improvements to the property and provision of capital equipment; 5) For any option to lease, a copy of the option, including all terms and conditions.
_____	e) Governmental Appropriations – a copy of the appropriation Act or ordinance accompanied by a statement of funding availability from an official of the governmental unit. If funds are to be made available from subsequent fiscal years, a copy of a resolution or other action of the governmental unit attesting to this intent;
_____	f) Grants – a letter from the granting agency as to the availability of funds in terms of the amount and time of receipt;
_____	g) All Other Funds and Sources – verification of the amount and type of any other funds that will be used for the project.
\$4,010,058	TOTAL FUNDS AVAILABLE

APPEND DOCUMENTATION AS ATTACHMENT 3B, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

IX. 1120.130 - Financial Viability

All the applicants and co-applicants shall be identified, specifying their roles in the project funding or guaranteeing the funding (sole responsibility or shared) and percentage of participation in that funding.

Financial Viability Waiver

The applicant is not required to submit financial viability ratios if:

1. All of the projects capital expenditures are completely funded through internal sources
2. The applicant's current debt financing or projected debt financing is insured or anticipated to be insured by MBIA (Municipal Bond Insurance Association Inc.) or equivalent
3. The applicant provides a third party surety bond or performance bond letter of credit from an A rated guarantor.

See Section 1120.130 Financial Waiver for information to be provided

APPEND DOCUMENTATION AS ATTACHMENT 40, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

The applicant or co-applicant that is responsible for funding or guaranteeing funding of the project shall provide viability ratios for the latest three years for which audited financial statements are available and for the first full fiscal year at target utilization, but no more than two years following project completion. When the applicant's facility does not have facility specific financial statements and the facility is a member of a health care system that has combined or consolidated financial statements, the system's viability ratios shall be provided. If the health care system includes one or more hospitals, the system's viability ratios shall be evaluated for conformance with the applicable hospital standards.

Provide Data for Projects Classified as:	Category A or Category B (last three years)			Category B (Projected)
Enter Historical and/or Projected Years:				
Current Ratio				
Net Margin Percentage				
Percent Debt to Total Capitalization				
Projected Debt Service Coverage				
Days Cash on Hand				
Cushion Ratio				

Provide the methodology and worksheets utilized in determining the ratios detailing the calculation and applicable line item amounts from the financial statements. Complete a separate table for each co-applicant and provide worksheets for each.

2. Variance

Applicants not in compliance with any of the viability ratios shall document that another organization, public or private, shall assume the legal responsibility to meet the debt obligations should the applicant default.

APPEND DOCUMENTATION AS ATTACHMENT 41, IN NUMERICAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

X. 1120.140 - Economic Feasibility

This section is applicable to all projects subject to Part 1120.

A. Reasonableness of Financing Arrangements

The applicant shall document the reasonableness of financing arrangements by submitting a notarized statement signed by an authorized representative that attests to one of the following:

- 1) That the total estimated project costs and related costs will be funded in total with cash and equivalents, including investment securities, unrestricted funds, received pledge receipts and funded depreciation; or
- 2) That the total estimated project costs and related costs will be funded in total or in part by borrowing because:
 - A) A portion or all of the cash and equivalents must be retained in the balance sheet asset accounts in order to maintain a current ratio of at least 2.0 times for hospitals and 1.5 times for all other facilities; or
 - B) Borrowing is less costly than the liquidation of existing investments, and the existing investments being retained may be converted to cash or used to retire debt within a 60-day period.

B. Conditions of Debt Financing

This criterion is applicable only to projects that involve debt financing. The applicant shall document that the conditions of debt financing are reasonable by submitting a notarized statement signed by an authorized representative that attests to the following, as applicable:

- 1) That the selected form of debt financing for the project will be at the lowest net cost available;
- 2) That the selected form of debt financing will not be at the lowest net cost available, but is more advantageous due to such terms as prepayment privileges, no required mortgage, access to additional indebtedness, term (years), financing costs and other factors;
- 3) That the project involves (in total or in part) the leasing of equipment or facilities and that the expenses incurred with leasing a facility or equipment are less costly than constructing a new facility or purchasing new equipment.

C. Reasonableness of Project and Related Costs

Read the criterion and provide the following:

1. Identify each department or area impacted by the proposed project and provide a cost and square footage allocation for new construction and/or modernization using the following format (insert after this page).

COST AND GROSS SQUARE FEET BY DEPARTMENT OR SERVICE									
Department (list below)	A	B	C	D	E	F	G	H	Total Cost (G + H)
	Cost/Square Foot New	Mod.	Gross Sq. Ft. New	Circ.*	Gross Sq. Ft. Mod.	Circ.*	Const. \$ (A x C)	Mod. \$ (B x E)	
Contingency									
TOTALS									
* Include the percentage (%) of space for circulation									

D. Projected Operating Costs

The applicant shall provide the projected direct annual operating costs (in current dollars per equivalent patient day or unit of service) for the first full fiscal year at target utilization but no more than two years following project completion. Direct cost means the fully allocated costs of salaries, benefits and supplies for the service.

E. Total Effect of the Project on Capital Costs

The applicant shall provide the total projected annual capital costs (in current dollars per equivalent patient day) for the first full fiscal year at target utilization but no more than two years following project completion.

APPEND DOCUMENTATION AS ATTACHMENT 42 IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM

XI. Safety Net Impact Statement

SAFETY NET IMPACT STATEMENT that describes all of the following must be submitted for **ALL SUBSTANTIVE AND DISCONTINUATION PROJECTS**:

1. The project's material impact, if any, on essential safety net services in the community, to the extent that it is feasible for an applicant to have such knowledge.
2. The project's impact on the ability of another provider or health care system to cross-subsidize safety net services, if reasonably known to the applicant.
3. How the discontinuation of a facility or service might impact the remaining safety net providers in a given community, if reasonably known by the applicant.

Safety Net Impact Statements shall also include all of the following:

1. For the 3 fiscal years prior to the application, a certification describing the amount of charity care provided by the applicant. The amount calculated by hospital applicants shall be in accordance with the reporting requirements for charity care reporting in the Illinois Community Benefits Act. Non-hospital applicants shall report charity care, at cost, in accordance with an appropriate methodology specified by the Board.
2. For the 3 fiscal years prior to the application, a certification of the amount of care provided to Medicaid patients. Hospital and non-hospital applicants shall provide Medicaid information in a manner consistent with the information reported each year to the Illinois Department of Public Health regarding "Inpatients and Outpatients Served by Payor Source" and "Inpatient and Outpatient Net Revenue by Payor Source" as required by the Board under Section 13 of this Act and published in the Annual Hospital Profile.
3. Any information the applicant believes is directly relevant to safety net services, including information regarding teaching, research, and any other service.

A table in the following format must be provided as part of Attachment 43.

Safety Net Information per PA 96-0031			
CHARITY CARE			
Charity (# of patients)	2009	2010	2011
Inpatient			
Outpatient			
Total			
Charity (cost in dollars)			
Inpatient			
Outpatient			
Total			
MEDICAID			
Medicaid (# of patients)	2009	2010	2011
Inpatient			
Outpatient			
Total			

Medicaid (revenue)			
Inpatient			
Outpatient			
Total			

APPEND DOCUMENTATION AS ATTACHMENT 43, IN NUMERIC SEQUENTIAL ORDER AFTER THE LAST PAGE OF THE APPLICATION FORM.

XII. Charity Care Information

Charity Care information **MUST** be furnished for **ALL** projects.

1. All applicants and co-applicants shall indicate the amount of charity care for the latest three **audited** fiscal years, the cost of charity care and the ratio of that charity care cost to net patient revenue.
2. If the applicant owns or operates one or more facilities, the reporting shall be for each individual facility located in Illinois. If charity care costs are reported on a consolidated basis, the applicant shall provide documentation as to the cost of charity care; the ratio of that charity care to the net patient revenue for the consolidated financial statement; the allocation of charity care costs; and the ratio of charity care cost to net patient revenue for the facility under review.
3. If the applicant is not an existing facility, it shall submit the facility's projected patient mix by payer source, anticipated charity care expense and projected ratio of charity care to net patient revenue by the end of its second year of operation.

Charity care" means care provided by a health care facility for which the provider does not expect to receive payment from the patient or a third-party payer. (20 ILCS 3960/3) Charity Care **must** be provided at cost.

A table in the following format must be provided for all facilities as part of Attachment 44.

CHARITY CARE			
	2009	2010	2011
Net Patient Revenue			
Amount of Charity Care (charges)			
Cost of Charity Care

Rockford, IL 61104

RE: Request For Proposal
Country Club Plaza Project Development
Country Club Hills, IL

Dear Bob:

USI Real Estate Brokerage Services, Inc., has been exclusively authorized by Total Renal Care, Inc. – a subsidiary of DaVita Inc. to assist in securing a lease requirement for DaVita Inc. DaVita Inc. is a Fortune 500 company with over 1,700 locations across the country and revenues in excess of \$8 billion.

We are currently surveying the Markham and Country Club Hills, IL areas to identify all of the alternatives available that best suits the Tenant's business and operational needs. Of the properties reviewed the development site owned by Tucker Development at Country Club Plaza has been identified as one that potentially meets the necessary requirements. We are requesting that you provide a written response to lease the above referenced Property to be built by you through the DaVita Preferred Developer Program ("PDP"). We request that you deliver your response no later than **October 22, 2012**. Please prepare the proposal to respond to the following terms:

PREMISES:

Outlot G8 as shown on the attached site plan for Country Club Plaza.
4215 W. 167th Street, Country Club Hill, IL 60478

(add parcel legal description)

TENANT (or "Lessee"):

Total Renal Care, Inc. or related entity to be named

LANDLORD (or "Lessor"):

Stenstrom Companies LTD DBA 4215 West Country Club Hill, LLC

SPACE REQUIREMENT:

Requirement is for approximately 9,776 rentable square feet

Tenant shall have the right to measure space based on most recent BOMA standards.

PRIMARY TERM:

The Term of the lease will be 15 years

BASE RENT:

The Base rent will be \$225,000 per year (NNN) with a 10% increase in the sixth year and the eleventh years.

LANDLORD'S MAINTENANCE:

Landlord, at its sole cost and expense, shall be responsible for the structural items (per PDP standards) for the Property.

**POSSESSION AND
RENT COMMENCEMENT:**

Landlord shall deliver Possession of the Premises to the Tenant upon the later of completion of Landlord's required work or mutual lease execution. Rent Commencement shall be the earlier of Ten (10) months from Possession or until:

- a. Construction improvements within the Premises have been completed in accordance with the final construction documents (except for nominal punch list items); and
- b. A certificate of occupancy for the Premises has been obtained from the city or county; and
- c. Tenant has obtained all necessary licenses and permits to operate its business.

LEASE FORM:

Tenant's standard lease form to match PDP requirements.

USE:

The Use is for a Dialysis Clinic, medical offices or other lawfully permitted use. *In addition, it is understood from information received from the Owner of the shopping center that the anchor tenants (Wal Mart and Loew's Cineplex) may need to approve the medical/dialysis use as well as agree to additional square footage for the Tenant's building. The site plan currently shows an 8,000 square foot building and the DaVita building will need to be approximately 9,776 square feet. Landlord will need to obtain these and any other approvals (i. e. governmental approvals for site plan revisions).*

PARKING:

Site design will include parking in a ratio of five (5) stalls per 1,000 rsf, and six (6) dedicated handicapped stalls (see attached plan).

BASE BUILDING:

Landlord shall deliver to the premises the Base Building improvements included in the attached Exhibit B.

OPTION TO RENEW:

Two (2) five (5) year options to renew the lease. Option term renewal and rent shall follow standard PDP requirements.

**FAILURE TO DELIVER
PREMISES:**

Terms to match standard PD program.

HOLDING OVER:

Terms to match standard PD program.

TENANT SIGNAGE:

Tenant shall have the right to install building, monument and pylon signage at the Premises, subject to compliance with all applicable laws and regulations.

BUILDING HOURS:

Tenant requires building hours of 24 hours a day, 7 days a week.

SUBLEASE/ASSIGNMENT:

Tenant will have the right at any time to sublease or assign its interest in this Lease to any majority owned subsidiaries or related entities of DaVita, Inc. without the consent of the Landlord, or to unrelated entities with Landlord's reasonable approval, per the standard PD program.

ROOF RIGHTS:

Tenant shall have the right to place a satellite dish on the roof at no additional fee.

HVAC:

As per the PDP minimum Base Building Improvement Requirements (see Exhibit B).

GOVERNMENTAL COMPLIANCE:

Landlord shall represent and warrant to Tenant that Landlord, at Landlord's sole expense, will cause the Premises, the building and parking facilities to be in full compliance with any governmental laws, ordinances, regulations or orders relating to, but not limited to, compliance with the Americans with Disabilities Act (ADA) and environmental conditions relating to the existence of asbestos and/or other hazardous materials, or soil and ground water conditions and shall indemnify and hold Tenant harmless from any claims, liabilities and cost arising from environmental conditions not caused by Tenant(s).

CONTINGENCIES:

Tenant CON Obligation: Landlord and Tenant understand and agree that the establishment of any chronic outpatient dialysis facility in the State of Illinois is subject to the requirements of the Illinois Health Facilities Planning Act, 20 ILCS 3960/1 et seq. and, thus, the Tenant cannot establish a dialysis facility on the Premises or execute a binding real estate lease in connection therewith unless Tenant obtains a Certificate of Need (CON) permit from the Illinois Health Facilities and Services Review Board (HFSRB). Based on the length of the HFSRB review process, Tenant does not expect to receive a CON permit prior to March 31, 2013. In light of the foregoing facts, the parties agree that they shall promptly proceed with due diligence to negotiate the terms of a definitive lease agreement and execute such agreement prior to approval of the CON permit provided, however, the lease shall not be binding on either party prior to approval of the CON permit and the lease agreement shall contain a contingency clause indicating that the lease agreement is not effective prior to CON permit approval. Assuming CON approval is granted, the effective date of the lease agreement shall be the first day of the calendar month following CON permit approval. In the event that the HFSRB does not award Tenant a CON permit to establish a dialysis center on the Premises by March 31, 2013 neither party shall have any further obligation to the other party with regard to the negotiations, lease, or Premises contemplated by this Letter of Intent.

BROKERAGE FEE:

Landlord recognizes USI Real Estate Brokerage Services Inc. as the Tenant's sole representatives for this site and shall pay a brokerage fee in accordance with the DaVita approved program with their Transactional Agents under the PDP.

PLANS:

Attached Site Plans:

It should be understood that this Request For Proposal is subject to the terms of Exhibit A attached hereto. The information in this email is confidential and may be legally privileged. It is intended solely for the addressee. Access to this email by anyone else is unauthorized.

Thank you for your time and consideration to partner with DaVita.

Sincerely,

Springfield, Illinois 62701

Re: Historic Preservation Act Determination

Dear Ms. Haaker:

Pursuant to Section 4 of the Illinois State Agency Historic Resources Preservation Act, DaVita HealthCare Partners Inc. and ISD Renal, Inc. ("Requestors") seek a formal determination from the Illinois Historic Preservation Agency as to whether their proposed project to establish a 24-station dialysis facility at 4215 167th St, Country Club Hills, Illinois 60478 ("Proposed Project") affects historic resources.

1. Project Description and Address

The Requestors are seeking a certificate of need from the Illinois Health Facilities and Services Review Board to establish a 24-station dialysis facility at 4215 167th St, Country Club Hills, Illinois 60478. The project will involve ground-up construction adjacent to an existing shopping center.

2. Topographical or Metropolitan Map

Metropolitan maps showing the location of the Proposed Project are attached at Attachment 1.

3. Historic Architectural Resources Geographic Information System

A map from the Historic Architectural Resources Geographic Information System is attached at Attachment 2. The property is not listed on the (i) National Register, (ii) within a local historic district, or (iii) within a local landmark.

4. Photographs of Standing Buildings/Structure

An aerial photograph of the development site is attached at Attachment 2.

November 15, 2012

Page 2

5. Address for Building/Structure

The proposed project will be located at 4215 167th St, Country Club Hills, Illinois 60478.

Thank you for your time and consideration of our request for Historic Preservation Determination. If you have any questions or need any additional information, please feel free to contact me at 773-549-9412 or timothy.tincknell@davita.com.

Sincerely,

NON CLINICAL							
Total Non-clinical							
TOTAL	\$4,010,058		9,776	9,776			

Section II, Discontinuation
Criterion 1110.130(a), General

1. The Applicants seek authority from the Health Facilities and Services Review Board (the "Board") to relocate Markham Renal Center's 24-station facility located at 3053 West 159th Street Markham, Illinois 60428 (the "Existing Facility") to 4215 West 167th Street, Country Club Hills, IL 60478 (the "Replacement Facility"). The Replacement Facility will be operated as a 24-station unit.
2. No other clinical services will be discontinued as a result of this project.
3. Anticipated Discontinuation Date: June 30, 2014.
4. The Applicants lease space for the Existing Facility from Canterbury Chicago, LLC. As a result, the Applicants will have no control over the use of the space after discontinuation of the Existing Facility.
5. All medical records will be transferred to the Replacement Facility.
6. This project is a relocation of the Existing Facility and not a discontinuation in its entirety. Therefore, this criterion does not apply.

Section II, Discontinuation**Criterion 1110.130(b), Reasons for Discontinuation**

The Existing Facility has been at the current location since 1996. It is aging and in need of repair. The primary entrance to the facility is in the rear alley of the strip mall where large semi-trailers and other delivery vehicles travel through continuously for adjacent and nearby businesses. This is particularly troublesome for the patients who are all chronically ill, usually elderly, and many of whom rely on assistive devices, such as canes and walkers to move about. Patients are intimidated and faced with these additional safety hazards when arriving and departing the facility. As a result many patients fear entering and exiting through this area, and some have even transferred to more accommodating facilities. Thus, the Applicants must relocate to a modern facility with an improved reception area in order better accommodate its patients' needs and improve access to a broader patient-base.

Section II, Discontinuation
Criterion 1110.130(c), Impact on Access

1. The relocation of the Existing Facility will not negatively impact access to care. To the contrary, it will improve access to life sustaining dialysis to are residents. The Applicants propose to relocate the existing 24-station dialysis facility. The Replacement Facility will be located at 4215 West 167th Street, Country Club Hills, IL 60478 approximately 2.43 miles, or 5 minutes, from the Existing Facility.
2. Documentation of the Applicant's request for an impact statement, which was sent to all in-center hemodialysis facilities within 45 minutes normal travel time of the Existing Facility is attached at Attachment – 10A. A list of facilities located within 45 minutes normal travel time is attached at Attachment – 10B. See Appendices – 1 and 2 for documentation that DaVita sent requests for an impact statement to all in-center hemodialysis facilities within 45 minutes travel time.
3. To date, the Applicants have not received any impact statements regarding the discontinuation.

Markham Renal Center
3053 West 159th Street
Markham, Illinois 60428

FEDERAL EXPRESS

Fresenius Medical Care Hazel Crest
17524 Carriage Way
Hazel Crest, Illinois 60429

To Whom It May Concern:

I am writing on behalf of DaVita Inc. and ISD Renal, Inc. to inform you of the proposed relocation of Markham Renal Center, a 24-station dialysis facility located at 3053 West 159th Street, Markham, Illinois 60428 (the "Existing Facility"). DaVita plans to relocate the Existing Facility to a nearby location. Your facility is within 45 minutes travel time of the Existing Facility.

The estimated date of discontinuation and relocation is approximately June 30, 2014.

Over the past two years, the facility has served between 83 and 101 end-stage renal disease patients at any given time and the census at the end of October 2012 was 96. We expect all existing patients of the Existing Facility will be transferred to the replacement facility.

While we do not anticipate the project will impact access to care for residents of the area or area health care facilities because we will accommodate the Markham Renal Center patient base at another nearby location, the Illinois Health Facilities and Services Review Board requires us to inform you of these plans to provide you an option to provide an impact statement from your facility.

If you choose to provide such a response, please detail whether your facility's admissions policies place any restrictions or limitations on providing service to residents of the market area and your capacity by shift. Please send any such response within fifteen days of receipt of this letter to Tim Tincknell, DaVita Inc., 2611 North Halsted Street, Chicago, Illinois 60614. If we do not receive a response from you within fifteen days, it will be assumed that you agree that the relocation of the Existing Facility will not affect your facility.

If you have any questions about DaVita's plans to relocate the facility, please feel free to contact me at timothy.tincknell@davita.com or 773-549-9412.

Sincerely,

A handwritten signature in dark ink, appearing to read 'Tim Tincknell', with a stylized, cursive-like script.

Tim Tincknell

On behalf of

DaVita Inc.
ISD Renal, Inc.

Section III, Project Purpose, Background and Alternatives – Information Requirements
Criterion 1110.230, Project Purpose, Background and Alternatives

Background of the Applicant

The Applicants are fit, willing and able, and have the qualifications, background and character to adequately provide a proper standard of health care services for the community. DaVita is a leading provider of dialysis services in the United States and is committed to innovation, improving clinical outcomes, compassionate care, education and empowering patients, and community outreach. A copy of DaVita's 2011 Community Care report, some of which is outlined below, details DaVita's commitment to quality, patient centric focus and community outreach, was previously submitted on October 2, 2012 as part of Applicants' application for Proj. No. 12-085. The proposed project involves the discontinuation of Markham Renal Center's existing 24-station dialysis facility and the establishment of a 24-station Replacement Facility located at 4215 West 167th Street, Country Club Hills, IL 60478.

DaVita has taken on many initiatives to improve the lives of patients suffering from chronic kidney disease ("CKD") and end stage renal disease ("ESRD"). These programs include the Kidney Smart, IMPACT, CathAway, and transplant assistance programs. Information on the Kidney Smart, IMPACT and CathAway programs are attached at Attachment – 11A.

There are over 26 million patients with CKD and that number is expected to rise. Current data reveals two troubling trends, which help explain the growing need for dialysis services:

- The prevalence of identified CKD stages 1 to 4 has increased from 10% to 15.1% between 1988 and 2008¹
- Increasing prevalence in the diagnosis of diabetes and hypertension, the two major causes of CKD²

Additionally, DaVita's Kidney Smart program helps to improve intervention and education for pre-ESRD patients. Approximately 65-75% of CKD Medicare patients have never been evaluated by a nephrologist.³ Timely CKD care is imperative for patient morbidity and mortality. Adverse outcomes of CKD can often be prevented or delayed through early detection and treatment. Several studies have shown that early detection, intervention and care of CKD may result in improved patient outcomes and reduce ESRD:

- Reduced GFR is an independent risk factor for morbidity and mortality,
- A reduction in the rate of decline in kidney function upon nephrologists referrals has been associated with prolonged survival of CKD patients,
- Late referral to a nephrologist has been correlated with lower survival during the first 90 days of dialysis, and
- Timely referral of CKD patients to a multidisciplinary clinical team may improve outcomes and reduce cost.

A care plan for patients with CKD includes strategies to slow the loss of kidney function, manage comorbidities, and prevent or treat cardiovascular disease and other complications of CKD, as well as ease the transition to kidney replacement therapy. Through the Kidney Smart program, DaVita offers

¹ US Renal Data System, USRDS 2011 Annual Data Report: Atlas of Chronic Kidney Disease and End-Stage Renal Disease in the United States, Bethesda, MD: National Institutes of Health, National Institute of Diabetes and Digestive and Kidney Diseases; 2011.

² Int'l Diabetes Found., *One Adult in Ten will have Diabetes by 2030* (Nov. 14, 2011), available at <http://www.idf.org/media-events/press-releases/2011/diabetes-atlas-5th-edition>.

³ US Renal Data System, USRDS 2011 Annual Data Report: Atlas of Chronic Kidney Disease and End-Stage Renal Disease in the United States, Bethesda, MD: National Institutes of Health, National Institute of Diabetes and Digestive and Kidney Diseases; 2011.

educational services to CKD patients that can help patients reduce, delay, and prevent adverse outcomes of untreated CKD. DaVita's Kidney Smart program encourages CKD patients to take control of their health and make informed decisions about their dialysis care.

To extend DaVita's CDK education and awareness programs to the Spanish-speaking population, DaVita launched its Spanish-language website (DaVita.com/Espanol) in November 2011. Similar to DaVita's English-language website, DaVita.com/Espanol provides easy-to-access information for Spanish-speaking kidney care patients and their families, including educational information on kidney disease, treatment options, and recipes.

DaVita's IMPACT program seeks to reduce patient mortality rates during the first 90-days of dialysis through patient intake, education and management, and reporting. In fact, since piloting in October 2007, the program has not only shown to reduce mortality rates by 8 percent but has also resulted in improved patient outcomes.

DaVita's CathAway program seeks to reduce the number of patients with central venous catheters ("CVC"). Instead patients receive arteriovenous fistula ("AV fistula") placement. AV fistulas have superior patency, lower complication rates, improved adequacy, lower cost to the healthcare system, and decreased risk of patient mortality compared to CVCs. In July 2003, the Centers for Medicare and Medicaid Services, the End Stage Renal Disease Networks and key providers jointly recommended adoption of a National Vascular Access Improvement Initiative ("NVAII") to increase the appropriate use of AV fistulas for hemodialysis. The CathAway program is designed to comply with NVAII through patient education outlining the benefits for AV fistula placement and support through vessel mapping, fistula surgery and maturation, first cannulation and catheter removal. DaVita has improved its patients' fistula-adoption rate by 91% between 2002 and 2011. At the end of 2011, 61.9% of DaVita patients were using fistulas. In addition, only 15.4% of DaVita patients who had been on dialysis for more than 90 days were still using their typically hospital-given catheters as their form of vascular access – DaVita's best outcomes to date. [DaVita is an industry leader in the rate of fistula use and had the lowest day-90 catheter rates among large dialysis providers in 2010.]

In an effort to reduce the length of hospital inpatient stays and readmissions, DaVita partners with hospitals to provide faster, more accurate ESRD patient placement through its Patient Pathways program. Importantly, Patient Pathways is not an intake program. An unbiased onsite liaison, who specializes in ESRD patient care, meets with both newly diagnosed and existing ESRD patients to assess their current ESRD care and provide information about insurance, treatment modalities, outpatient care, financial obligations before discharge, and grants available to ESRD patients. Patients choose a provider/center that best meets their needs for insurance, preferred nephrologists, transportation, modality and treatment schedule.

DaVita currently partners with over 300 hospitals nationwide through Patient Pathways. Patient Pathways has demonstrated benefits to hospitals, patients, physicians and dialysis centers. The program has resulted in a 0.5 day reduction in average length of stay for both new admissions and readmissions and an 11% reduction in average acute dialysis treatments per patient. Moreover, patients are better educated and arrive at the dialysis center more prepared and less stressed. They have a better understanding of their insurance coverage and are more engaged and satisfied with their choice of dialysis facility. As a result, patients have higher attendance rates, are more compliant with their dialysis care, and have fewer avoidable readmissions.

DaVita's transplant referral and tracking program ensures every dialysis patient is informed of transplant as a modality option and promotes access to transplantation for every patient who is interested and eligible for transplant. The social worker or designee obtains transplant center guidelines and criteria for selection of appropriate candidates and assists transplant candidates with factors that may affect their eligibility, such as severe obesity, adherence to prescribed medicine or therapy, and social/emotional/financial factors related to post-transplant functioning.

In an effort to better serve all kidney patients, DaVita believes in requiring that all providers measure outcomes in the same way and report them in a timely and accurate basis or be subject to penalty. There are four key measures that are the most common indicators of quality care for dialysis providers - dialysis adequacy, fistula use rate, nutrition and bone and mineral metabolism. Adherence to these standard measures has been directly linked to 15-20% fewer hospitalizations. On each of these measures, DaVita has demonstrated superior clinical outcomes, which directly translated into 7% reduction in hospitalizations among DaVita patients, the monetary result of which is \$509 million in savings to the health care system and the American taxpayer in 2010.

DaVita Rx, the first and largest licensed, full-service U.S. renal pharmacy, focuses on the unique needs of dialysis patients. Since 2005, DaVita Rx has been helping improve outcomes by delivering to dialysis centers or to patients' homes, making it easier for patients to keep up with their drug regimens. As of 2011, DaVita Rx patients have an 83.3% adherence rate, compared to those who use chain pharmacies and have a 39.2% adherence rate, and those who use independent pharmacies and have a 48.9% adherence rate.

DaVita is also committed to sustainability and reducing its carbon footprint. In fact, it is the only kidney care company recognized by the Environmental Protection Agency for its sustainability initiatives. In 2010, DaVita opened the first LEED-certified dialysis center in the U.S. Furthermore, it annually saves approximately 8 million pounds of medical waste through dialyzer reuse and it also diverts 95% of its waste through composting and recycling programs. It has also undertaken a number of similar initiatives at its offices and is seeking LEED Gold certification for its corporate headquarters.

DaVita consistently raises awareness to community needs and makes cash contributions to organizations aimed at improving access to kidney care. In 2011, DaVita donated more than \$2.5 million to kidney disease- awareness organizations such as the Kidney TRUST, the National Kidney Foundation, the American Kidney Fund, and several other organizations. Its own employees, or members of the "DaVita Village," assisted in these initiatives and have raised more than \$4.1 million, thus far, through the annual Tour DaVita bicycle ride. The Kidney Rock 5K Run/Walk raised \$500,000 for Bridge of Life - DaVita Medical Missions in 2011.

DaVita does not limit its community engagement to the U.S. alone. It founded Bridge of Life, a 501(c)(3) nonprofit organization that operates on donations to bring care to those for whom it is out of reach. In addition to contributing Dialysis equipment to DaVita Medical Missions, Bridge of Life has accomplished 18 Missions since 2006, with more than 75 participating teammates spending more than 650 days abroad. It provided these desperately needed services in Cameroon, India, Ecuador, Guatemala, and the Phillipines, and trained many health care professionals there as well.

Neither the Centers for Medicare and Medicaid Services or the Illinois Department of Public Health has taken any adverse action involving civil monetary penalties or restriction or termination of participation in the Medicare or Medicaid programs against any of the applicants, or against any Illinois health care facilities owned or operated by the Applicants, directly or indirectly, within three years preceding the filing of this application.

1. Health care facilities owned or operated by the Applicants:

A list of health care facilities owned or operated by the Applicants in Illinois is attached at Attachment - 11B.

Dialysis facilities are currently not subject to State Licensure in Illinois.

2. Certification that no adverse action has been taken against either of the Applicants or against any health care facilities owned or operated by the Applicants in Illinois within three years preceding the filing of this application is attached at Attachment - 11C.

3. An authorization permitting the Illinois Health Facilities and Services Review Board ("HFSRB") and the Illinois Department of Public Health ("IDPH") access to any documents necessary to verify information submitted, including, but not limited to: official records of IDPH or other State agencies; and the records of nationally recognized accreditation organizations is attached at Attachment – 11C.

Medical Officer (OCMO)**

Allen R. Nissenson, MD
Chief Medical Officer

Meredith Mathews, MD
Robert Provenzano, MD
John Robertson, MD
David B. Van Wyck, MD

April 30, 2009

Dear Medical Directors:

As your partner, DaVita® and OCMO are committed to helping you achieve unprecedented clinical outcomes with your patients. As part of OCMO's Relentless Pursuit of Quality™, DaVita will be launching our top two clinical initiatives; IMPACT, and CathAway™ at our annual 2009 Nationwide Meeting. Your facility administrators will be orienting you on both programs upon their return from the meeting in early May.

IMPACT: The goal of IMPACT is to reduce incident patient mortality. IMPACT stands for Incident Management of Patients Actions Centered on Treatment. The program focuses on three components: patient intake, education and management and reporting. IMPACT has been piloting since October 2007 and has demonstrated a reduction in mortality. The study recently presented at the National Kidney Foundation's Spring Clinical Meeting in Nashville, TN. In addition to lower mortality rates, patient outcomes improved - confirming this vulnerable patient population is healthier under DaVita's relentless pursuit of quality care.

CathAway: Higher catheter use is associated with increased infection, morbidity, mortality and hospitalizations ^{(1) (2)}. The 7-step Cathaway Program supports reducing the number of patients with central venous catheters (CVCs). The program begins with patient education outlining the benefits of fistula placement. The remaining steps support the patient through vessel mapping, fistula surgery and maturation, first cannulation and catheter removal. For general information about the CathAway program, see the November 2008 issue of QUEST, DaVita's Nephrology Journal.

As Medical Directors, here is how you can support both initiatives in your facilities:

- **Assess incident patients regularly in their first 90 days:** At your monthly DaVita QIFMM meetings, discuss patients individually and regularly. Use the IMPACT scorecard to prompt these discussions.
- **Adopt "Facility Specific Orders":** Create new facility specific orders using the form that will be provided to you. Each of your attending physicians will also need to be educated on the use of the form for their new patients.
- **Minimize the "catheter-removal" cycle time:** At your monthly DaVita QIFMM meetings, review each of your catheter patients with the team and identify obstacles causing delays in catheter removal.
- **Plan fistula and graft placements:** Start AV placement plans early by scheduling vessel mapping and surgery evaluation appointments for Stage 4 CKD patients. Schedule fistula placement surgery for those patients where ESRD is imminent in the next 3-6 months. Share early fistula and graft placement expectations with attending physicians in your dialysis facilities.

Launch Kits:

In May, Launch Kits containing materials and tools to support both initiatives will be arriving at your facilities. IMPACT kits will include a physician introduction to the program, step by step implementation plan and a full set of educational resources. FAs and Vascular Access Leaders will begin training on a new tool to help identify root-causes for catheter removal delays.

As the leader in the dialysis center, your support of these efforts is crucial. As always, I welcome your feedback, questions and ideas. Together with you, our physician partners, we will drive catheter use to all-time lows and help give our incident patients the quality and length of life they deserve.

Sincerely,

Allen R. Nissenson, MD, FACP
Chief Medical Officer, DaVita

- (1) Dialysis Outcomes and Practice Patterns Study (DOPPS): 2 yrs/7 Countries / 10,000 pts.
- (2) Pastan et al: Vascular access and increased risk of death among hemodialysis patients.

Davita®

Attachment - 11A

Dear Physician Partners:

IMPACT™ is an initiative focused on reducing incident patient mortality. The program provides a comprehensive onboarding process for incident patients, with program materials centered on four key clinical indicators—access, albumin, anemia, and adequacy.

Medical Directors: How can you support IMPACT in your facilities?

- Customize the new Standard Admission Order template into facility-specific orders.
Drive use of the standard order with your attending physicians
- Review your facility IMPACT scorecard at your monthly QIFMM meeting
- Talk about IMPACT regularly with your attending physicians

Attending Physicians: How can you support IMPACT in your facilities?

- Use the IMPACT scorecard to assess incident patients
- Educate teammates about the risk incident patients face and how IMPACT can help

How was IMPACT developed? What are the initial results?

From October 2007 to April 2009, IMPACT was piloted in DaVita® centers. Early results, presented at the National Kidney Foundation's Spring Clinical Meeting in Nashville, TN this April, showed an 8% reduction in annualized mortality. In addition to lower mortality, IMPACT patients showed improvements in fistula placement rates and serum albumin levels. The results are so impressive that we are implementing this program throughout the Village.

Your support of this effort is crucial.

If you have not seen the IMPACT order template and scorecard by the end of June, or if you have additional questions about the program, email impact@davita.com. Together we can give our incident patients the quality and length of life they deserve.

Sincerely,

Dennis Kogod
Chief Operating Officer

FOR IMMEDIATE RELEASE

DaVita's IMPACT Program Reduces Mortality for New Dialysis Patients

Study Shows New Patient Care Model Significantly Improves Patient Outcomes

El Segundo, Calif., (March, 29, 2009) – DaVita Inc., a leading provider of kidney care services for those diagnosed with chronic kidney disease (CKD), today released the findings of a study revealing DaVita's IMPACT™ (Incident Management of Patients, Actions Centered on Treatment) pilot program can significantly reduce mortality rates for new dialysis patients. The study presented at the National Kidney Foundation's Spring Clinical Meeting in Nashville, TN details how the IMPACT patient care model educates and manages dialysis patients within the first 90 days of treatment, when they are most unstable and are at highest risk. In addition to lower mortality rates, patient outcomes improved - confirming the health of this vulnerable patient population is better supported under DaVita's *Relentless Pursuit of Quality™* care.

The pilot program was implemented with 606 patients completing the IMPACT program over a 12 month period in 44 DaVita centers around the nation. IMPACT focuses on patient education and important clinical outcomes - such as the measurement of adequate dialysis, access placement, anemia, and albumin levels - monitoring the patient's overall health in the first 90 days on dialysis. Data reflects a reduction in annualized mortality rates by eight percent for IMPACT patients compared with non-IMPACT patients in the DaVita network. Given that DaVita has roughly 28,000 new patients starting dialysis every year, this reduction affects a significant number of lives.

In addition, a higher number of IMPACT patients versus non-IMPACT patients had an arteriovenous fistula (AVF) in place. Research shows that fistulas - the surgical connection of an artery to a vein - last longer and are associated with lower rates of infection, hospitalization and death compared to all other access choices.

Allen R. Nissenson, MD, Chief Medical Officer at DaVita says, "The IMPACT program is about quality patient care starting in the first 90 days and extending beyond. Improved outcomes in new dialysis patients translates to better long term results and healthier patients overall."

Researchers applaud the IMPACT program's inclusion of all patients starting dialysis, regardless of their cognitive ability or health status. Enrolling all patients at this early stage in their treatment allows them to better understand their disease and care needs while healthcare providers work to improve their outcomes. Through this program, DaVita mandates reporting on this particular population to better track and manage patients through their incident period.

Dennis Kogod, Chief Operating Officer of DaVita says, "We are thrilled by the promising results IMPACT has had on our new dialysis patients. DaVita continues to be the leader in the kidney care community, and we look forward to rolling out this program to all facilities later this year, to improve the health of all new dialysis patients."

Incident Management of Hemodialysis Patients: Managing the First 90 Days

John Robertson¹, Pooja Goel¹, Grace Chen¹, Ronald Levine¹, Debbie Benner¹, and Amy Burdan¹
¹DaVita Inc., El Segundo, CA, USA

IMPACT (Incident Management of Patients, Actions Centered on Treatment) is a program to reduce mortality and morbidity in new patients during the first 3 months of dialysis, when these patients are most vulnerable. IMPACT was designed to standardize the onboarding process of incident patients from their 0 to 90-day period. We report on an observational (non-randomized), un-blinded study of 606 incident patients evaluated over 12 months (Oct77-Oct08) at 44 US DaVita facilities.

The study focused on 4 key predictive indicators associated with lower mortality and morbidity—anemia, albumin, adequacy and access (4As). IMPACT consisted of:

- (1) Structured New Patient Intake Process with a standardized admission order, referral fax, and an intake checklist;
- (2) 90-day Patient Education Program with an education manual and tracking checklist;
- (3) Tools for 90-day Patient Management Pathway including QOL; and
- (4) Data Monitoring Reports.

Data as of July, 2008 is reported. Patients in the IMPACT group were 60.6 $\pm$ 15.1 years old (mean $\pm$ 3SD), 42.8% Caucasian, 61% male with 25% having a fistula. Results showed a reduction in 90-day mortality almost 2 percentage points lower (6.14% vs. 7.98%; $p < 0.10$) among IMPACT versus nonIMPACT patients. Changes among the 4As showed higher albumin levels from 3.5 to 3.6 g/dL (note that some IMPACT patients were on protein supplementation during this period) and patients achieving fistula access during their first 90-days was 25% vs. 21.4%, IMPACT and nonIMPACT, respectively ($p \leq 0.05$). However, only 20.6% of IMPACT patients achieved Hct targets ($33 \leq \text{Hb} \leq 36$) vs. 23.4% for controls ($p < 0.10$); some IMPACT patients may still have > 36 -level Hcts. Mean calculated Kt/V was 1.54 for IMPACT patients vs. 1.58 for nonIMPACT patients ($p \leq 0.05$).

IMPACT is a first step toward a comprehensive approach to reduce mortality of incident patients. We believe this focus may help us to better manage CKD as a continuum of care. Long-term mortality measures will help determine if this process really impacts patients in the intended way, resulting in longer lives and better outcomes.

IMPACT Tools

Here's how the IMPACT program will help the team record data, educate patients and monitor their progress in your facilities.

- 1 Standard Order Template, a two-page form with drop-down menus that can be customized into a center-specific template
- 2 Intake Checklist to gather registration and clinical data prior to admission
- 3 Patient Announcement to alert teammates about new incident patients
- 4 Patient Education Book and Flip Chart to teach patients about dialysis
- 5 Tracking Checklist for the team to monitor progress over the first 90 days
- 6 IMPACT Scorecard to track monthly center summary and patient level detail for four clinical indicators: access, albumin, adequacy, anemia

This form is a Standard Order Template used for patient registration and clinical data collection. It includes sections for Patient Information, Clinical Information, and a table for tracking various clinical indicators over time.

This is an Intake Checklist form used to gather registration and clinical data prior to admission. It includes sections for Patient Information, Clinical Information, and a table for tracking various clinical indicators over time.

This is a Patient Announcement form featuring a 'Big Team' logo and motivational text. It includes a section for 'Attention, teammates!' and a table for tracking various clinical indicators over time.

This is a Patient Education Book and Flip Chart featuring a 'Big Team' logo and motivational text. It includes a section for 'Attention, teammates!' and a table for tracking various clinical indicators over time.

This is an IMPACT Scorecard form showing monthly center summary and patient level detail. It includes a table for tracking various clinical indicators over time and a section for 'IMPACT Scorecard'.

This is an IMPACT Education Checklist form showing patient level detail for four clinical indicators. It includes a table for tracking various clinical indicators over time and a section for 'IMPACT Education Checklist'.

Dale Galassie
Chair
Illinois Health Facilities and Services Review Board
525 West Jefferson Street, 2nd Floor
Springfield, Illinois 62761

Dear Chairman Galassie:

I hereby certify under penalty of perjury as provided in § 1-109 of the Illinois Code of Civil Procedure, 735 ILCS 5/1-109 that no adverse action as defined in 77 IAC 1130.140 has been taken against any in-center dialysis facility owned or operated by DaVita HealthCare Partners Inc. or ISD Renal, Inc. in the State of Illinois during the three year period prior to filing this application.

Additionally, pursuant to 77 Ill. Admin. Code § 1110.230(a)(3)(C), I hereby authorize the Health Facilities and Services Review Board ("HFSRB") and the Illinois Department of Public Health ("IDPH") access to any documents necessary to verify information submitted as part of this application for permit. I further authorize HFSRB and IDPH to obtain any additional information or documents from other government agencies which HFSRB or IDPH deem pertinent to process this application for permit.

Sincerely,

James K. Hilger
Chief Accounting Officer
DaVita HealthCare Partners Inc.

Subscribed and sworn to me
This 12th day of November, 2012

Notary Public

Attachment – 11C

Section III, Project Purpose, Background and Alternatives – Information Requirements
Criterion 1110.230(b), Project Purpose, Background and Alternatives

Purpose of the Project

1. The Applicants propose to relocate the Existing Facility located at 3053 West 159th Street Markham, Illinois 60428 just 2.43 miles, or 5 minutes to 4215 West 167th Street, Country Club Hills, IL 60478 (the "Replacement Facility") to meet the growing need for dialysis services in HSA 7.

The Existing Facility is suboptimal for both patients and staff. As the Applicant does not own the building and the lease term is nearing its end, it has determined that it will be better able to serve the needs of its patients if the service is relocated to a modernized facility. The Existing Facility is located in the 260,000-square-foot Canterbury Shopping Center which was built over 50 years ago in 1961. The Canterbury Shopping Center is a mixed use multi-tenant property with about 40 separate suites on 29 acres. It is the largest and primary retail shopping center for the surrounding area and primarily leases to retail shops like Ashley Stewart, Big Lots, Fairplay Foods, Payday Express, Anna's Linen's, several fast food restaurants and a Greyhound depot. There are no other health care facilities in the building. The dialysis facility does not have access to the front of the mall where the vast majority of parking is located but rather is behind the retail stores abutting to the back alley of the mall with limited parking and semi-truck traffic at the entrance is consistently a hazard for patients and staff. This location was selected by a predecessor operator and it is not consistent with the Applicant's standards for facility operation. Thus, the Applicants must relocate to a modern facility with an improved reception area in order better accommodate its patients' needs and improve access to a broader patient-base.

The Replacement Facility is needed to serve the growing demand for dialysis services in the area. There is currently a need for 51 dialysis stations in HSA 7. Currently, the Existing Facility serves 96 ESRD patients. Kenneth Cline, M.D., the Medical Director for Markham Renal Center, anticipates all 96 current patients will transfer to the Replacement Facility. Dr. Cline also anticipates that approximately 10 patients he is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes. Furthermore, Dr. Cline is currently treating 489 CKD patients that reside in the area. See Attachment – 12A. Approximately 77 of Dr. Cline's patients suffering from Stage 4 and 5 CKD reside within 10 minutes of the Replacement Facility. Conservatively, based upon attrition due to patient death, transplant, or return of function, it is projected that 20 of the patients will require dialysis within the next 12 to 18 months. Thus, approximately 126 patients will receive treatment at the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

Furthermore, utilization of existing facilities to accommodate growing need for dialysis is not feasible. As shown in Attachment – 12B, there are currently 31 existing or approved dialysis facilities within 30 minutes normal travel time of Markham Renal Center. As reported by the Renal Network (the "Renal Network Utilization Data") for the quarter ended September 30, 2012, utilization of existing and approved facilities 83%, and more than half of the facilities were operating near or above the State Board's utilization standard. Additionally, the number of patients receiving treatment for ESRD from facilities within the service area has increased by 9%, or 258 patients, in the last 12 months alone.

2. A map of the market area for the proposed facility is attached at Attachment – 12C. The market area encompasses a 11 mile radius around the proposed facility. The boundaries of the market area are as follows:
 - North approximately 30 minutes normal travel time to Downtown Chicago
 - Northeast approximately 30 minutes normal travel time to 79th St & Lake Shore Drive
 - East approximately 30 minutes normal travel time to Gary, IN
 - Southeast approximately 30 minutes normal travel time to Schererville, IN
 - South approximately 30 minutes normal travel time to Manteno

- Southwest approximately 30 minutes normal travel time to Manhattan
- West approximately 30 minutes normal travel time to Crest Hill
- Northwest approximately 30 minutes normal travel time to Darien

The minimum size of a GSA is 30 minutes; however, most of the patients reside within 10 minutes normal travel time of the proposed facility. Diabetes and hypertension (high blood pressure) are the two leading causes of CKD and ESRD. See Attachment 12D. Notably, African Americans are at an increased risk of ESRD compared to the general population due to the higher prevalence of diabetes and hypertension in the African American community. In fact, the ESRD incident rate among African Americans is 3.6 times greater than whites.

Not surprisingly, demand in the community surrounding the facility is rising, as it is comprised approximately of a 90% African American population. Furthermore, 95% of the Existing Facility's patients in 2011 were African American compared to the State-wide average and HSA average African American populations of 41% and 42%, respectively. As such, demand for dialysis services is expected to increase. Dr. Cline's current pre-ESRD and ESRD patient-base confirms this. Thus, relocating this facility to a modern, more accessible space is essential.

5. The Existing Facility is suboptimal and cannot meet the needs of patients and staff. As stated above, patients face additional safety hazards when arriving and departing the facility. As a result many patients fear entering and exiting through this area, and some have even transferred to more accommodating facilities. Thus, the Applicants must relocate to a modern facility with an improved reception area in order better accommodate its patients' needs and improve access to a broader patient-base.
6. The Applicants anticipate the proposed facility will have quality outcomes comparable to other DaVita facilities. Additionally, in an effort to better serve all kidney patients, DaVita believes in requiring all providers measure outcomes in the same way and report them in a timely and accurate basis or be subject to penalty. There are four key measures that are the most common indicators of quality care for dialysis providers - dialysis adequacy, fistula use rate, nutrition and bone and mineral metabolism. Adherence to these standard measures has been directly linked to 15-20% fewer hospitalizations. On each of these measures, DaVita has demonstrated superior clinical outcomes, which directly translated into 7% reduction in hospitalizations among DaVita patients, the monetary result of which was approximately \$1 Billion in savings to the health care system and the American taxpayer in 2011.

KIDNEY DOCTORS, LTD.

November 19, 2012

Dale Galassie, Chair
Illinois Health Facilities and Services Review Board
525 West Jefferson Street, 2nd Floor
Springfield, Illinois 62761

Dear Chairman Galassie:

I am the medical director for Markham Renal Center and the primary attending nephrologist rounding on patients at this facility. I am writing to ask that the CON Board approve DaVita HealthCare Partners Inc.'s planned relocation of Markham Renal Center. Specifically, DaVita proposes to relocate its existing dialysis facility approximately 2 miles away to 4215 West 167th Street in order to meet the growing need for dialysis services in the South Suburbs of Chicago.

The existing facility is suboptimal for both patients and staff. The primary entrance to the facility is in the rear alley of the strip mall where large delivery vehicles travel through continuously for adjacent big box businesses. This is particularly troublesome for my patients who are all chronically ill, usually elderly, and many of whom rely on assistive devices, such as canes and walkers to move about. In fact, many of my patients have asked to go to other facilities in the area for this reason. Due to my growing patient population, this is no longer a viable alternative.

Markham Renal Center is currently treating 96 ESRD patients, as of October 31, 2012. The total number of in-center hemodialysis patients my practice has referred by facility and zip code of residence for the most recent three years as reported to The Renal Network is attached hereto at Attachment 1. I also anticipate that approximately 10 patients our group, Kidney Doctors Ltd., is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes.

Additionally, my practice is treating approximately 489 pre-ESRD patients, 77 of whom reside within 10 minutes of the proposed facility. Based upon attrition due to patient death, transplant, or return of function, I anticipate that my practice will refer 20 of these pre-ESRD patients for in-center hemodialysis within the next 12 to 18 months. A list of these pre-ESRD patients by zip

Michael R. Peck, M.D. • Daniel A. Yohay, M.D. • Kenneth N. Cline, M.D. • Lourdes R. Terrado, M.D.

Attachment - 12A

code is attached hereto as Attachment 2. Thus, approximately 126 patients will receive treatment at Markham Renal Center within the next 12 to 18 months following project completion.

Furthermore, based on increasing demand in the suburban Chicago Planning Area, HSA 7, CON Board staff has determined that there is a need for 51 dialysis stations in the area where this facility operates. This is particularly true given the large African American population which exhibits higher incidence rates of diabetes, hypertension, and ESRD. As a result, I ask that the Board approve this project.

These patient referrals have not been used to support another pending or approved certificate of need application.

The information in this letter is true and correct to the best of my knowledge.

I support the proposed expansion of Markham Renal Center.

Sincerely,

Kenneth Cline M.D.

Kenneth N. Cline, M.D., Nephrologist
Kidney Doctors, Ltd., President

This is a detailed black and white map of Cook County, Illinois, and its surrounding areas. The map shows major highways, cities, towns, and villages. Key features include Lake Michigan to the north, the city of Chicago to the west, and various suburban areas like Naperville, Aurora, and Joliet. The map is labeled with street names, city names, and highway numbers. A scale bar at the bottom indicates distances in miles.

Geographical Features:

- Lake Michigan:** Located to the north of Cook County.
- Chicago:** The city of Chicago is located to the west of Cook County.
- Suburban Areas:** Various suburban areas are shown, including Naperville, Aurora, Joliet, and Oak Park.
- Highways:** Major highways are shown, including I-55, I-54, I-53, I-52, I-51, I-50, I-49, I-48, I-47, I-46, I-45, I-44, I-43, I-42, I-41, I-40, I-39, I-38, I-37, I-36, I-35, I-34, I-33, I-32, I-31, I-30, I-29, I-28, I-27, I-26, I-25, I-24, I-23, I-22, I-21, I-20, I-19, I-18, I-17, I-16, I-15, I-14, I-13, I-12, I-11, I-10, I-9, I-8, I-7, I-6, I-5, I-4, I-3, I-2, I-1.

Editorial Review

The obesity epidemics in ESRD: from wasting to waist?

Carmine Zoccali

Nephrology, Dialysis and Transplantation Unit and CNR-IBIM Clinical Epidemiology and Pathophysiology of Renal Diseases and Hypertension, Reggio Calabria, Italy

Keywords: CKD; ESRD; malnutrition; metabolic syndrome; obesity

During the last six decades, from the World War II years on, the phenotype of human beings has changed profoundly. The dominant slim, pale and light phenotype of the 1920s has gradually been overthrown by the heavy, large and ponderous phenotype of obese people. Obesity is rampant in the USA (<http://www.cdc.gov/nccdphp/dnpa/obesity/trend/maps/>, accessed on 20th July 2008) and, even though to a lesser degree, most European countries share the same epochal evolution [1]. Type 2 diabetes and cardiovascular diseases are the two most important non-communicable disease outcomes of obesity. Abdominal obesity is strongly associated, and at least in part in a causal manner, with hypertension, dyslipidaemia and impaired insulin resistance [2]. Well beyond these complications, neoplasia [3], greater exposure to drugs of various sort, sterility [4], asthma [5], non-alcoholic liver disease [6] and osteoarthritis [7] are all much concerning sequelae of this epidemics. The risk of disease and disability attributable to overweight and obesity starts early, just when the upper limit of the ideal body mass index (BMI) (21–23 kg/m²) is trespassed and rises linearly at progressively higher BMI levels [8,9]. The burden of disease attributable to excess BMI among adults in the USA is enormous. Obesity at age 40 years reduced life expectancy by ~7 years in women and by ~6 years in men in the Framingham cohort [10]. In Europe, more than 1 million deaths and ~12 million life-years of ill health (disability adjusted life-years—DALYs) were counted in 2000 [9].

Obesity epidemics in the dialysis population

Until now the major focus of nutrition research in dialysis patients has been on low BMI and protein energy wasting

[11]. The identification and elucidation of this pervasive condition in the dialysis population has certainly been a major achievement of modern nephrology. However, a thorough refocusing of the problem is needed. In Western countries, overweight and obesity have now gained the ominous role of leading risk factors for chronic kidney disease (CKD) [12]. The pathophysiological underpinnings of obesity-related CKD are still unclear, but solid working hypothesis have been formulated and the issue is being intensively investigated in experimental models and in human studies [13]. From an epidemiologic point of view, the association between BMI and the incidence of ESRD has been convincingly established in population-based studies in Japanese men [14] and in American people [15]. Obesity is one of the most frequent risk factors for progressive CKD in the general population. For this reason, this condition has become highly prevalent in dialysis units (Figure 1). The problem was nicely described by Kramer *et al.*, in synchronic analyses based on the USRDS and on the Behavioral Risk Factor Surveillance System of the Centers for Disease Control and Prevention [16]. During a relatively brief period (just 8 years, from 1994 to 2002), the mean BMI increased from 25.7 kg/m² among incident patients in 1995 to 27.5 kg/m² in 2002 and from 25.7 to 26.7 kg/m² in the total US population (Figure 2). Overall in 2002, almost one-third of incident dialysis patients were obese and, worryingly so, the prevalence of patients with stage 2 obesity (BMI > 35 kg/m²) increased by 63%. As expected, the prevalence of obesity was higher in diabetics than in non-diabetics with a forecasted 2007 prevalence of total obesity in these patients as high as 44.6%. The predicted population average of BMI for 2007 (~28 kg/m²) clearly indicates that just a small fraction of dialysis patients in the USA have a normal or a low body weight. In a cohort of incident dialysis patients (1997–2004) in Europe (the Netherlands) [17], the average BMI was 25.3 kg/m² showing that in the other side of the Atlantic more than half of ESRD patients are overweight or obese. In brief, there is unmistakable evidence that the obese phenotype is at least as frequent in the dialysis population as it is in the general population. Thus, nutritional disorders in ESRD should be interpreted in a context that takes into appropriate account that fat excess rather than fat deficiency is the most common trait in dialysis patients.

Fig. 1. Simple model whereby the obesity epidemics in the general population generate a parallel obesity epidemics in the dialysis population. Death and weight loss generated by CKD and other obesity-driven diseases represent competing risks that limit the rise in the prevalence of obesity in the dialysis population.

Fig. 2. Temporal trends in BMI (kg/m^2) among incident ESRD patients population by year of dialysis initiation and in the coeval general US population (Behavioral Risk Factor Surveillance System). Redrawn from Kramer HJ *et al.* [16].

Obesity and the reverse epidemiology conundrum in ESRD

The term 'reverse epidemiology' has been widely adopted to describe the apparently paradoxical inverse association between mortality and BMI and other risk factors in ESRD. Studies in renal registries [18], in clinical databases [19] and in large, international studies [20] have coherently shown that BMI is indeed inversely associated with death risk. This phenomenon is not typical of ESRD being common also to other chronic conditions, including cardiovascular disease [21,22]. The term 'reverse epidemiology' has fierce opponents [23]. It was emphasized that rules of epidemiology have not been reversed in dialysis patients, and recent data in a European dialysis cohort documented that the relationship between the BMI and mortality does not deviate from that of the coeval background population [17]. In addition, most studies did not adequately control for potential confounders such as cancer and CHF, and smoking. The main reason of concern with the term 'reverse' is that such a definition may distract from the complexity of the ESRD population and

may facilitate confusion between association and causation thus diverting clinical attention and scientific research from truly important issues related to risk factors modification in this population [23]. There is no question that obesity was a trait providing survival advantage to our ancestors at a time when famine and infectious diseases decimated the population and when the average duration of human life was 40 years or less [24]. The same survival advantage may apply to high-risk conditions such as cardiac disease, cancer and ESRD that are all characterized by a short life expectancy and by specific (non-Framingham) risk factors. Any case studying risk factors for survival in the dialysis population in no way imposes deviations from classic epidemiology principles. In this respect, there is absolutely no dissent on the fact that a high BMI *per se* should not be seen as a necessarily protective factor in ESRD. In fact, current guidelines in ESRD recommend a multidimensional assessment of nutritional status [25,26] both for prognosis and treatment while the very champions of the 'reverse epidemiology' concept accurately dissected the BMI-protein balance link when assessing the risk of malnutrition in this population [27].

How to measure the obesity burden in epidemiological studies

Defining obesity and how to measure it is of fundamental importance if we are to develop disease-specific studies in ESRD. However, in broad terms, the very essence of obesity and how it should be measured in population studies is an unsettled problem. This is so in epidemiological research in general and in research specific to ESRD as well. Most of the progress on the understanding of the detrimental effect of fat excess on human health was made in studies based on the BMI. In recent years, this time-honoured metric has been under intense scrutiny and, on the basis of a thorough meta-analysis, eminent epidemiologists came to the conclusion that the BMI is an inadequate metric for the cardiovascular risk of obesity [28]. Authoritative claims have been made that BMI should be abandoned straightaway [29]. Which is the best metric of this condition remains highly controversial. Proper positioning of the indicators of obesity may be obtained by studying the inter-correlation between the various metrics, their relationship with clinical outcomes and by cogent biological knowledge. Detailed analyses of the relationship between BMI, overall fat mass, waist circumference and abdominal visceral fat (as measured by computed tomography) in Caucasian and African American population samples have been made [30]. Collectively, the mean correlation between BMI and fat mass in these populations was very high ($r = 0.94$). Of note, waist circumference correlated very well both with BMI ($r = 0.93$) and overall fat mass ($r = 0.92$). Finally, BMI ($r = 0.72$) as well as the other metrics (fat mass $r = 0.73$; waist circumference $r = 0.77$) correlated equally well with abdominal visceral adiposity by CT. Since the major factor implicated in the health risks of obesity seems to be the excess adipose tissue and/or some aspects of cell biology, the data on the relationship between BMI and overall fat mass

would be against the contention that BMI is not a valid surrogate for fat mass, at least in apparently healthy adults in the community. The same reasoning applies to waist circumference. Since most of the variance in obesity-related anthropometrics is captured by BMI, some obesity experts see no reason to replace BMI by waist circumference or other metrics as a measure of obesity [30]. However, it has been argued that this position does not consider that analyses in apparently healthy subjects may not apply to patients with chronic conditions. Furthermore, simple analyses on inter-correlations between indicators of obesity in no way can surrogate the study of the relationship of these measurements with clinical outcomes, which is the ultimate, adjudicative criterion. In this respect, it is well demonstrated that waist circumference and the related metric waist hip ratio (WHR) add prognostic information at any level of BMI. In a large survey based on the III National Health and Examination survey within the three BMI categories of normal weight, overweight and class I obesity, a larger waist circumference coherently identified individuals at an increased health risk [31]. Likewise, the WHR was the strongest body size measure associated with myocardial infarction in the INTERHEART study, a world-wide extended case-control study [32]. Importantly, in this study, BMI lost substantial prognostic value in an analysis adjusting for WHR and other risk factors while the predictive power of WHR became stronger after these statistical adjustments, which is in line with biological evidence indicating that visceral fat is a relevant source of endogenous compounds impinging upon cardiovascular health. Whether metrics of waist circumference hold prognostic value for death and cardiovascular complications in patients with chronic diseases other than myocardial infarction is still unknown [33].

Obesity and protein energy wasting in ESRD: a two-dimensional problem

BMI is the most used anthropometric measure of overall body size in ESRD. The limitations of this metric are well known to nephrologists [11]. BMI does not distinguish between fat mass and lean mass. At similar BMI, percentage of body fat may differ considerably in people who exercise heavily and in sedentary people. Furthermore, in the elderly and non-Caucasian populations, the relationship between BMI and fat depots is different from that in the young and Caucasian populations [34]. Importantly, BMI does not give information on segmental fat distribution (abdominal versus peripheral fat), a phenomenon with metabolic and clinical bearings. Abdominal obesity is largely caused by the accumulation of visceral (or intra-abdominal) fat while peripheral obesity is mainly characterized by subcutaneous fat accumulation. Due to metabolic differences of the two fat depots, the two may differ in their role of predicting metabolic disturbances and clinical events. Although still not adequately emphasized, the notion that nutritional disorders in ESRD cannot be merely classified on the basis of BMI is well recognized. In 2003, Beddhu *et al.* [35] looked at the problem of which body component (increased

muscle mass or body fat) confers survival advantage in a large cohort of incident haemodialysis patients with high BMI. Twenty-four-hour urinary creatinine excretion prior entering regular dialysis treatment was used as a measure of muscle mass. Patients with high BMI had lower death risk than those with a normal or low BMI. However, high BMI patients with relatively low muscle mass (urinary creatinine ≤ 0.55 g/day) had higher risk of all-cause (HR, 1.14; $P < 0.001$) and cardiovascular (HR, 1.19; $P < 0.001$) deaths than patients with the same BMI but low muscle mass. Similarly, in a recent study by Honda in a relatively small cohort of ESRD patients in Sweden [36], protein-energy wasting (as measured by the subjective global assessment of nutrition) was equally prevalent in patients with low, normal and high BMI. In this cohort, BMI *per se* did not predict mortality. However, for each BMI group, protein-energy malnutrition was associated with increased death risk. Overall, these studies show that 'obese sarcopenia', i.e. a high body mass in the face of a low urinary creatinine or protein energy malnutrition, underlies a high death risk in ESRD patients thus indicating that the prognostic value of nutritional status in dialysis patients should be based on the BMI and on metrics of muscle mass and/or protein-energy balance.

Anthropometric measures of visceral fat accumulation such as waist circumference and the WHR are directly associated with all-cause and CV mortalities in the general population. Notwithstanding, ESRD is a chronic condition where nutrition disorders are exceedingly common, and no specific studies of these metrics are available in dialysis patients. Also in light of the rising tide of overweight and obesity in the ESRD population and of the adverse clinical outcomes observed in obese sarcopenia [35,36], the issue of simultaneously testing the prognostic value of metrics of overall body size (like the BMI) and segmental fat accumulation (waist circumference and WHR) in ESRD patients appears to be of major relevance. Very recently, relevant information on the validity of waist circumference as a measure of visceral fat accumulation has been gathered in patients with CKD [37]. In a series of 122 Brazilian patients with stage 3–5 CKD, this metric was strongly associated with visceral fat as measured by abdominal computed tomography and the association of this measurement with cardiovascular risk factors was of the same magnitude of that observed for visceral fat. These findings suggest that waist circumference is a simple and cheap instrument that may be applied for investigating the role of visceral fat on health outcomes in epidemiological studies in patients with renal diseases. In a combined cohort composed by patients enrolled in the Atherosclerosis Risk in Communities (ARIC) and the Cardiovascular Health Study (CHS), a larger waist hip ratio was associated with a 22% risk excess for incident CKD and a 12% risk excess for a combined outcome composed by incident CKD and death [38]. In the same study, BMI appeared protective for the composite outcome but did not predict the risk for CKD. Likewise, in another study in the same cohort [39], a large waist hip ratio was associated with an increased risk of cardiac events while obesity, defined on the basis of BMI > 30 kg/m², did not predict these events. Overall these analyses indicate that, like in the general population, measures of abdominal fat accumulation maintain a direct association with the

risk for CKD, cardiovascular events and death. Thus testing the value of these metrics in ESRD appears to be of foremost importance. This may be problematic in patients treated with peritoneal dialysis where other options for risk stratification can be envisaged [40]. Overall, combining estimates of overall body size such as the BMI and of abdominal fat accumulation such as waist circumference may indeed refine the prognostic power of these measurements and produce interesting hypotheses for future clinical trials in ESRD patients. For example, does weight loss confer a health benefit in patients with a high BMI and a high waist circumference? Conversely, does a relatively large waist circumference in the face of a normal or low BMI identify patients at the highest risk of adverse clinical outcomes? Does the relationship between waist circumference and the waist hip ratio with biomarkers of inflammation observed in the general population and in patients with cardiovascular diseases hold true in ESRD and is this relationship modified by the BMI in these patients? In light of the pervasiveness of the obesity epidemics (as defined on the basis of the BMI) in ESRD, studying anthropometric measurements of visceral obesity as related to health outcomes in this population appears to be an absolute research priority.

Conflict of interest statement. None declared.

The Burden of Kidney Failure

Each year in the United States, more than 100,000 people are diagnosed with kidney failure, a serious condition in which the kidneys fail to rid the body of wastes.¹ Kidney failure is the final stage of chronic kidney disease (CKD).

Diabetes is the most common cause of kidney failure, accounting for nearly 44 percent of new cases.¹ Even when diabetes is controlled, the disease can lead to CKD and kidney failure. Most people with diabetes do not develop CKD that is severe enough to progress to kidney failure. Nearly 24 million people in the United States have diabetes,² and nearly 180,000 people are living with kidney failure as a result of diabetes.¹

People with kidney failure undergo either dialysis, an artificial blood-cleaning process, or transplantation to receive a healthy kidney from a donor. Most U.S. citizens who develop kidney failure are eligible for federally funded care. In 2005, care for patients with kidney failure cost the United States nearly \$32 billion.¹

¹United States Renal Data System. *USRDS 2007 Annual Data Report*. Bethesda, MD: National Institute of Diabetes and Digestive and Kidney Diseases, National Institutes of Health, U.S. Department of Health and Human Services; 2007.

²National Institute of Diabetes and Digestive and Kidney Diseases. *National Diabetes Statistics, 2007*. Bethesda, MD: National Institutes of Health, U.S. Department of Health and Human Services, 2008.

African Americans, American Indians, and Hispanics/Latinos develop diabetes, CKD, and kidney failure at rates higher than Caucasians. Scientists have not been able to explain these higher rates. Nor can they explain fully the interplay of factors leading to kidney disease of diabetes—factors including heredity, diet, and other medical conditions, such as high blood pressure. They have found that high blood pressure and high levels of blood glucose increase the risk that a person with diabetes will progress to kidney failure.

**Primary Causes
of Kidney Failure (2005)**

Source: United States Renal Data System. *USRDS 2007 Annual Data Report*.

The Course of Kidney Disease

Diabetic kidney disease takes many years to develop. In some people, the filtering function of the kidneys is actually higher than normal in the first few years of their diabetes.

Over several years, people who are developing kidney disease will have small amounts of the blood protein albumin begin to leak into their urine. This first stage of CKD is called microalbuminuria. The kidney's filtration function usually remains normal during this period.

As the disease progresses, more albumin leaks into the urine. This stage may be called macroalbuminuria or proteinuria. As the amount of albumin in the urine increases, the kidneys' filtering function usually begins to drop. The body retains various wastes as filtration falls. As kidney damage develops, blood pressure often rises as well.

Overall, kidney damage rarely occurs in the first 10 years of diabetes, and usually 15 to 25 years will pass before kidney failure occurs. For people who live with diabetes for more than 25 years without any signs of kidney failure, the risk of ever developing it decreases.

Diagnosis of CKD

People with diabetes should be screened regularly for kidney disease. The two key markers for kidney disease are eGFR and urine albumin.

- **eGFR.** eGFR stands for estimated glomerular filtration rate. Each kidney contains about 1 million tiny filters made up of blood vessels. These filters are called glomeruli. Kidney function can be checked by estimating how much blood the glomeruli filter in a minute. The calculation of eGFR is based on the amount of creatinine, a waste product, found in a blood sample. As the level of creatinine goes up, the eGFR goes down.

Kidney disease is present when eGFR is less than 60 milliliters per minute.

The American Diabetes Association (ADA) and the National Institutes of Health (NIH) recommend that eGFR be calculated from serum creatinine at least once a year in all people with diabetes.

- **Urine albumin.** Urine albumin is measured by comparing the amount of albumin to the amount of creatinine in a single urine sample. When the kidneys are healthy, the urine will contain large amounts of creatinine but almost no albumin. Even a small increase in the ratio of albumin to creatinine is a sign of kidney damage.

Kidney disease is present when urine contains more than 30 milligrams of albumin per gram of creatinine, with or without decreased eGFR.

The ADA and the NIH recommend annual assessment of urine albumin excretion to assess kidney damage in all people with type 2 diabetes and people who have had type 1 diabetes for 5 years or more.

If kidney disease is detected, it should be addressed as part of a comprehensive approach to the treatment of diabetes.

Effects of High Blood Pressure

High blood pressure, or hypertension, is a major factor in the development of kidney problems in people with diabetes. Both a family history of hypertension and the presence of hypertension appear to increase chances of developing kidney disease. Hypertension also accelerates the progress of kidney disease when it already exists.

Blood pressure is recorded using two numbers. The first number is called the systolic pressure, and it represents the pressure in the arteries as the heart beats. The second number is called the diastolic pressure, and it represents the pressure between heartbeats. In the past, hypertension was defined as blood pressure higher than 140/90, said as "140 over 90."

The ADA and the National Heart, Lung, and Blood Institute recommend that people with diabetes keep their blood pressure below 130/80.

Hypertension can be seen not only as a cause of kidney disease but also as a result of damage created by the disease. As kidney disease progresses, physical changes in the kidneys lead to increased blood pressure. Therefore, a dangerous spiral, involving rising blood pressure and factors that raise blood pressure, occurs. Early detection and treatment of even mild hypertension are essential for people with diabetes.

Preventing and Slowing Kidney Disease

Blood Pressure Medicines

Scientists have made great progress in developing methods that slow the onset and progression of kidney disease in people with diabetes. Drugs used to lower blood pressure can slow the progression of kidney disease significantly. Two types of drugs, angiotensin-converting enzyme (ACE) inhibitors and angiotensin receptor blockers (ARBs), have proven effective in slowing the progression of kidney disease. Many people require two or more drugs to control their blood pressure. In addition to an ACE inhibitor or an ARB, a diuretic can also be useful. Beta blockers, calcium channel blockers, and other blood pressure drugs may also be needed.

An example of an effective ACE inhibitor is lisinopril (Prinivil, Zestril), which doctors commonly prescribe for treating kidney disease of diabetes. The benefits of lisinopril extend beyond its ability to lower blood pressure: it may directly protect the kidneys' glomeruli. ACE inhibitors have lowered proteinuria and slowed deterioration even in people with diabetes who did not have high blood pressure.

An example of an effective ARB is losartan (Cozaar), which has also been shown to protect kidney function and lower the risk of cardiovascular events.

Any medicine that helps patients achieve a blood pressure target of 130/80 or lower provides benefits. Patients with even mild hypertension or persistent microalbuminuria should consult a health care provider about the use of antihypertensive medicines.

Moderate-protein Diets

In people with diabetes, excessive consumption of protein may be harmful. Experts recommend that people with kidney disease of diabetes consume the recommended dietary allowance for protein, but avoid high-protein diets. For people with greatly reduced kidney function, a diet containing reduced amounts of protein may help delay the onset of kidney failure. Anyone following a reduced-protein diet should work with a dietitian to ensure adequate nutrition.

Intensive Management of Blood Glucose

Antihypertensive drugs and low-protein diets can slow CKD. A third treatment, known as intensive management of blood glucose or glycemic control, has shown great promise for people with diabetes, especially for those in the early stages of CKD.

The human body normally converts food to glucose, the simple sugar that is the main source of energy for the body's cells. To enter cells, glucose needs the help of insulin, a hormone produced by the pancreas. When a person does not make enough insulin, or the body does not respond to the insulin that is present, the body cannot process glucose, and it builds up in the bloodstream. High levels of glucose in the blood lead to a diagnosis of diabetes.

Intensive management of blood glucose is a treatment regimen that aims to keep blood glucose levels close to normal. The regimen includes testing blood glucose frequently, administering insulin throughout the day on the basis of food intake and physical activity, following a diet and activity plan, and consulting a health care team regularly. Some people use an insulin pump to supply insulin throughout the day.

A number of studies have pointed to the beneficial effects of intensive management of blood glucose. In the Diabetes Control and Complications Trial supported by the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), researchers found a 50 percent decrease in both development and progression of early diabetic kidney disease in participants who followed an intensive regimen for controlling blood glucose levels. The intensively managed patients had average blood glucose levels of 150 milligrams per deciliter—about 80 milligrams per deciliter lower than

the levels observed in the conventionally managed patients. The United Kingdom Prospective Diabetes Study, conducted from 1976 to 1997, showed conclusively that, in people with improved blood glucose control, the risk of early kidney disease was reduced by a third. Additional studies conducted over the past decades have clearly established that any program resulting in sustained lowering of blood glucose levels will be beneficial to patients in the early stages of CKD.

Dialysis and Transplantation

When people with diabetes experience kidney failure, they must undergo either dialysis or a kidney transplant. As recently as the 1970s, medical experts commonly excluded people with diabetes from dialysis and transplantation, in part because the experts felt damage caused by diabetes would offset benefits of the treatments. Today, because of better control of diabetes and improved rates of survival following treatment, doctors do not hesitate to offer dialysis and kidney transplantation to people with diabetes.

Currently, the survival of kidneys transplanted into people with diabetes is about the same as the survival of transplants in people without diabetes. Dialysis for people with diabetes also works well in the short run. Even so, people with diabetes who receive transplants or dialysis experience higher morbidity and mortality because of coexisting complications of diabetes—such as damage to the heart, eyes, and nerves.

Good Care Makes a Difference

People with diabetes should

- have their health care provider measure their A1C level at least twice a year. The test provides a weighted average of their blood glucose level for the previous 3 months. They should aim to keep it at less than 7 percent.
 - work with their health care provider regarding insulin injections, medicines, meal planning, physical activity, and blood glucose monitoring.
 - have their blood pressure checked several times a year. If blood pressure is high, they should follow their health care provider's plan for keeping it near normal levels. They should aim to keep it at less than 130/80.
 - ask their health care provider whether they might benefit from taking an ACE inhibitor or ARB.
 - ask their health care provider to measure their eGFR at least once a year to learn how well their kidneys are working.
 - ask their health care provider to measure the amount of protein in their urine at least once a year to check for kidney damage.
 - ask their health care provider whether they should reduce the amount of protein in their diet and ask for a referral to see a registered dietitian to help with meal planning.
-

Points to Remember

- Diabetes is the leading cause of chronic kidney disease (CKD) and kidney failure in the United States.
 - People with diabetes should be screened regularly for kidney disease. The two key markers for kidney disease are estimated glomerular filtration rate (eGFR) and urine albumin.
 - Drugs used to lower blood pressure can slow the progression of kidney disease significantly. Two types of drugs, angiotensin-converting enzyme (ACE) inhibitors and angiotensin receptor blockers (ARBs), have proven effective in slowing the progression of kidney disease.
 - In people with diabetes, excessive consumption of protein may be harmful.
 - Intensive management of blood glucose has shown great promise for people with diabetes, especially for those in the early stages of CKD.
-

Hope through Research

The number of people with diabetes is growing. As a result, the number of people with kidney failure caused by diabetes is also growing. Some experts predict that diabetes soon might account for half the cases of kidney failure. In light of the increasing illness and death related to diabetes and kidney failure, patients, researchers, and health care professionals will continue to benefit by addressing the relationship between the two diseases. The NIDDK is a leader in supporting research in this area.

Several areas of research supported by the NIDDK hold great potential. Discovery of ways to predict who will develop kidney disease may lead to greater prevention, as people with diabetes who learn they are at risk institute strategies such as intensive management of blood glucose and blood pressure control.

Participants in clinical trials can play a more active role in their own health care, gain access to new research treatments before they are widely available, and help others by contributing to medical research. For information about current studies, visit www.ClinicalTrials.gov.

The National Kidney and Urologic Diseases Information Clearinghouse (NKUDIC) is a service of the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK). The NIDDK is part of the National Institutes of Health of the U.S. Department of Health and Human Services. Established in 1987, the Clearinghouse provides information about diseases of the kidneys and urologic system to people with kidney and urologic disorders and to their families, health care professionals, and the public. The NKUDIC answers inquiries, develops and distributes publications, and works closely with professional and patient organizations and Government agencies to coordinate resources about kidney and urologic diseases.

Publications produced by the Clearinghouse are carefully reviewed by both NIDDK scientists and outside experts.

This publication is not copyrighted. The Clearinghouse encourages users of this fact sheet to duplicate and distribute as many copies as desired.

NIH Publication No. 08-3925
September 2008

Chronic kidney disease (CKD) is a condition in which the kidneys are damaged and cannot filter blood as well as possible. This damage can cause wastes to build up in the body and lead to other health problems, including cardiovascular disease (CVD), anemia, and bone disease. People with early CKD tend not to feel any symptoms. The only ways to detect CKD are through a blood test to estimate kidney function, and a urine test to assess kidney damage. CKD is usually an irreversible and progressive disease and can lead to kidney failure, also called End Stage Renal Disease (ESRD), over time if it is not treated. Once detected, CKD can be treated through medication and lifestyle changes to slow down the disease progression, and to prevent or delay the onset of kidney failure. However, the only treatment options for kidney failure are dialysis or a kidney transplant.

CKD is common among adults in the United States.

More than 10% of people, or more than 20 million, aged 20 years or older in the United States have CKD.

- ▶ CKD is more common among women than men.
- ▶ More than 35% of people aged 20 years or older with diabetes have CKD.
- ▶ More than 20% of people aged 20 years or older with hypertension have CKD.

Figure legend: Percent with CKD among adult U.S. population by age, sex, and race/ethnicity.

Risk factors for development of CKD

Adults with diabetes or hypertension are at an increased risk of developing CKD. Other risk factors for developing CKD include CVD, obesity, elevated cholesterol, and a family history of CKD. The risk of developing CKD increases with age largely because risk factors for kidney disease become more common as one ages.

Risk factors for progression of CKD

Inadequately controlled diabetes and hypertension increase the risk of progression of CKD to kidney failure. Repeated episodes of acute kidney injury from a variety of causes (e.g., infections, drugs, or toxins injurious to the kidney) can also contribute to progression of CKD to kidney failure, especially in the elderly. While CKD is more common among women, men with CKD are 50% more likely than women to progress to kidney failure.

Important health consequences of CKD

Cardiovascular disease

CKD is an important risk factor for cardiovascular disease, including heart attacks, heart failure, heart rhythm disturbances, and strokes. Risk factors for cardiovascular disease that require careful attention in people with CKD include tobacco use, uncontrolled high blood pressure, elevated blood sugar, excessive weight, and elevated cholesterol.

Kidney failure

Kidney failure or ESRD occurs when the kidneys are no longer able to provide waste removal functions for the body. At this point, dialysis or kidney transplantation becomes necessary for survival.

- ▶ About 110,000 patients in the United States started treatment for ESRD in 2007.
- ▶ Leading causes of ESRD are diabetes and hypertension. In 2006, 7 out of 10 new cases of ESRD in the United States had diabetes or hypertension listed as the primary cause. Less common causes include glomerulonephritis, hereditary kidney disease, and malignancies such as myeloma.
- ▶ Incidence of ESRD is greater among adults older than 65 years.
- ▶ African Americans were nearly four times more likely to develop ESRD than whites in 2007. However, this disparity in ESRD incidence has narrowed from 1998 to 2005.
- ▶ Hispanics have 1.5 times the rate of kidney failure compared to non-Hispanic whites.
- ▶ Between 2000 and 2007, the adjusted incidence of ESRD due to diabetes has increased by less than 1% and the adjusted incidence of glomerulonephritis has fallen by 21%, suggesting possible improvement in the clinical management of this condition. In contrast, the adjusted incidence of ESRD due to hypertension has increased by 8% between 2000 and 2007.

Deaths

Premature death from both cardiovascular disease and from all causes is higher in adults with CKD compared to adults without CKD. In fact, individuals with CKD are 16 to 40 times more likely to die than to reach ESRD.

Other health consequences

The kidneys have many functional roles, including fluid and electrolyte balance, waste removal, acid-base balance, bone health, and stimulation of red blood cell production. CKD can be associated with fluid overload, sodium and potassium imbalances, bone and mineral disorders, anemia, and reduced quality of life. Additionally, adults with CKD typically have other chronic diseases, such as diabetes, hypertension, and other cardiovascular diseases.

What can be done to reduce the burden of CKD and prevent or delay kidney failure?

The federal and state government and various national organizations have developed comprehensive strategies to address the burden of kidney disease in the United States. The most efficient way to reduce the burden of CKD is to prevent and treat its risk factors. Screening individuals at high risk for CKD (e.g., people older than 50 years; people with a history of diabetes mellitus, hypertension, cardiovascular disease; or people who have a family history of CKD) may prevent or delay kidney failure. Screening demonstration projects are currently ongoing to evaluate the effectiveness. Therapeutic treatments can slow progression of kidney disease as well as manage its complications. Timely referral to a nephrologist (kidney doctor) and getting treatment also improves outcomes.

Section III, Project Purpose, Background and Alternatives – Information Requirements
Criterion 1110.230(c), Project Purpose, Background and Alternatives

Alternatives

The Applicants explored several options prior to determining to relocate Markham Renal Center. After exploring the options below in detail, the Applicants determined to relocate its capacity in order to meet rising demand. A review of each of the options considered and the reasons they were rejected follows.

Do Nothing

This is not a viable option. The Existing Facility is suboptimal for both patients and staff. As the Applicant does not own the building and the lease term is nearing its end, it has determined that it will be better able to serve the needs of its patients if the service is relocated to a modernized facility. The Existing Facility is located in a multi-tenant building which is over 50 years old, is aging and in need of repair. The primary entrance to the facility is in the rear alley of the strip mall where large semi-trailers and other delivery vehicles travel through continuously for adjacent and nearby businesses. This set up is particularly troublesome for the patients who are all chronically ill, usually elderly, and many of whom rely on assistive devices, such as canes and walkers to move about. Patients are intimidated and faced with these additional safety hazards when arriving and departing the facility. As a result many patients fear entering and exiting through this area, and some have even transferred to more accommodating facilities. Thus, the Applicants must relocate to a modern facility with an improved reception area in order better accommodate its patients' needs and improve access to a broader patient-base.

There is no capital cost with this alternative.

Utilize Existing Facilities

The Replacement Facility is needed to serve the growing demand for dialysis services in Markham. There is currently a need for 51 dialysis stations in HSA 7. Dr. Cline anticipates all 96 current patients will transfer to the Replacement Facility. Dr. Cline also anticipates that approximately 10 patients he is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes. Furthermore, Dr. Cline is currently treating 489 CKD patients that reside in and around Markham. See Attachment – 13A. Approximately 77 of the patients suffering Stage 4 and 5 CKD reside within 10 minutes of the Replacement Facility. Conservatively, based upon attrition due to patient death, transplant, or return of function, it is projected that 20 of the patients will require dialysis within the next 12 to 18 months. Thus, approximately 126 patients will receive treatment at the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

There is no capital cost with this alternative.

Relocate Markham Renal Center

DaVita determined that the most effective and efficient way to serve its patients and address the need for more stations in HSA 7 is to relocate the existing facility. The proposed site for the Replacement Facility is located just 2.43 miles from the current site, and will adequately serve Markham Renal Center's current and projected patient-base.

Thus, the Applicants selected this option.

The cost associated with this option is \$4,010,058.

Dale Galassie, Chair
Illinois Health Facilities and Services Review Board
525 West Jefferson Street, 2nd Floor
Springfield, Illinois 62761

Dear Chairman Galassie:

I am the medical director for Markham Renal Center and the primary attending nephrologist rounding on patients at this facility. I am writing to ask that the CON Board approve DaVita HealthCare Partners Inc.'s planned relocation of Markham Renal Center. Specifically, DaVita proposes to relocate its existing dialysis facility approximately 2 miles away to 4215 West 167th Street in order to meet the growing need for dialysis services in the South Suburbs of Chicago.

The existing facility is suboptimal for both patients and staff. The primary entrance to the facility is in the rear alley of the strip mall where large delivery vehicles travel through continuously for adjacent big box businesses. This is particularly troublesome for my patients who are all chronically ill, usually elderly, and many of whom rely on assistive devices, such as canes and walkers to move about. In fact, many of my patients have asked to go to other facilities in the area for this reason. Due to my growing patient population, this is no longer a viable alternative.

Markham Renal Center is currently treating 96 ESRD patients, as of October 31, 2012. The total number of in-center hemodialysis patients my practice has referred by facility and zip code of residence for the most recent three years as reported to The Renal Network is attached hereto at Attachment 1. I also anticipate that approximately 10 patients our group, Kidney Doctors Ltd., is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes.

Additionally, my practice is treating approximately 489 pre-ESRD patients, 77 of whom reside within 10 minutes of the proposed facility. Based upon attrition due to patient death, transplant, or return of function, I anticipate that my practice will refer 20 of these pre-ESRD patients for in-center hemodialysis within the next 12 to 18 months. A list of these pre-ESRD patients by zip

Michael R. Peck, M.D. • Daniel A. Yohay, M.D. • Kenneth N. Cline, M.D. • Lourdes R. Terrado, M.D.

Attachment - 13A

code is attached hereto as Attachment 2. Thus, approximately 126 patients will receive treatment at Markham Renal Center within the next 12 to 18 months following project completion.

Furthermore, based on increasing demand in the suburban Chicago Planning Area, HSA 7, CON Board staff has determined that there is a need for 51 dialysis stations in the area where this facility operates. This is particularly true given the large African American population which exhibits higher incidence rates of diabetes, hypertension, and ESRD. As a result, I ask that the Board approve this project.

These patient referrals have not been used to support another pending or approved certificate of need application.

The information in this letter is true and correct to the best of my knowledge.

I support the proposed expansion of Markham Renal Center.

Sincerely,

Kenneth Cline M.D.

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(a), Size of the Project

The Applicants propose to relocate an existing dialysis facility. Pursuant to Section 1110, Appendix B of the HFSRB's rules, the State standard allows for a maximum of 10,800 to 15,600 gross square feet for 24 dialysis stations. The total gross square footage of the proposed dialysis facility is 9,776 gross square feet. The project is slightly below the State standard for new construction because the facility's greater size allows it to more efficiently design its clinical and support space.

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(b), Project Services Utilization

By the second year of operation, the proposed facility's annual utilization shall exceed HFSRB's utilization standard of 80%. Pursuant to Section 1100.1430 of the HFSRB's rules, facilities providing in-center hemodialysis should operate their dialysis stations at or above an annual utilization rate of 80%, assuming three patient shifts per day per dialysis station, operating six days per week.

Dr. Cline anticipates all 96 current patients will transfer to the Replacement Facility. Although the Existing Facility has historically operated below capacity, this is a direct result of the poor location and building accessibility issues which will not exist at the Replacement Facility. Additionally, Dr. Cline anticipates that approximately 10 patients he is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes. Dr. Cline is also currently treating 489 CKD patients that reside in and around Markham. See Attachment – 15A. Approximately 77 of the patients suffering Stage 4 and 5 CKD reside within 10 minutes of the Replacement Facility. Conservatively, based upon attrition due to patient death, transplant, or return of function, it is projected that 20 of the patients will require dialysis within the next 12 to 18 months. Thus, approximately 126 patients will receive treatment at the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(c), Unfinished or Shell Space

This project will not include unfinished space designed to meet an anticipated future demand for service. Accordingly, this criterion is not applicable.

Section IV, Project Scope, Utilization, and Unfinished/Shell Space
Criterion 1110.234(d), Assurances

This project will not include unfinished space designed to meet an anticipated future demand for service. Accordingly, this criterion is not applicable.

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(b), Planning Area Need

1. Planning Area Need

The Applicants propose to relocate its existing 24-station dialysis facility located at 3053 West 159th Street Markham, Illinois 60428 and to a new 24-station dialysis facility at 4215 West 167th Street, Country Club Hills, IL 60478. The Existing Facility is suboptimal for both patients and staff. As the Applicant does not own the building and the lease term is nearing its end, it has determined that it will be better able to serve the needs of its patients if the service is relocated to a modernized facility. The Existing Facility located in a building which is over 50 years old, is aging and in need of repair. The primary entrance to the facility is in the rear alley of the strip mall where large semi-trailers and other delivery vehicles travel through continuously for adjacent and nearby businesses. This set up is particularly troublesome for the patients who are all chronically ill, usually elderly, and many of whom rely on assistive devices, such as canes and walkers to move about. Patients are intimidated and faced with these additional safety hazards when arriving and departing the facility. As a result many patients fear entering and exiting through this area, and some have even transferred to more accommodating facilities. Thus, the Applicants must relocate to a modern facility with an improved reception area in order better accommodate its patients' needs and improve access to a broader patient-base.

Dr. Cline anticipates all 96 current patients will transfer to the Replacement Facility. Dr. Cline also anticipates that approximately 10 patients he is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes. Approximately 77 of Dr. Cline's patients suffering Stage 4 and 5 CKD reside within 10 minutes of the Replacement Facility. See Attachment – 26A. Conservatively, based upon attrition due to patient death, transplant, or return of function, it is projected that 20 of the patients will require dialysis within the next 12 to 18 months. Thus, approximately 126 patients will receive treatment at the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

The relocation of Markham Renal Center is necessary to meet the dialysis needs of these patients, and will allow for safer and more optimal treatment times for patients. See Attachment – 26A.

2. Service to Planning Area Residents

The primary purpose is to ensure the residents of Markham have access to life sustaining dialysis. As evidenced in the physician referral letter attached at Attachment – 26A, 89 of 121 current patients live and all of his pre-ESRD patients in the service area.

3. Service Demand – Establishment of In-Center Hemodialysis Service

Currently, the Existing Facility serves 91 ESRD patients, all of whom Dr. Cline anticipates will transfer to the Replacement Facility. Dr. Cline also anticipates that approximately 10 patients he is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes. Approximately 77 of Dr. Cline's patients suffering Stage 4 and 5 CKD reside within 10 minutes of the Replacement Facility. See Attachment – 26A. Conservatively, based upon attrition due to patient death, transplant, or return of function, it is projected that 20 of the patients will require dialysis within the next 12 to 18 months. Thus, approximately 126 patients will receive treatment at the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard.

4. Service Accessibility

As set forth throughout this application, the proposed relocation is needed to maintain access to life-sustaining dialysis for residents of Chicago. The relocation is necessary to provide essential care to Markham patients, as the Existing Facility is in need of repair and cannot adequately serve the patient needs. Average utilization of existing facilities in the GSA is 83%. As such, the expanded Replacement Facility will better accommodate current and future demand for dialysis services and ensure dialysis services are accessible to residents of Markham.

KIDNEY DOCTORS, LTD.

November 19, 2012

Dale Galassie, Chair
Illinois Health Facilities and Services Review Board
525 West Jefferson Street, 2nd Floor
Springfield, Illinois 62761

Dear Chairman Galassie:

I am the medical director for Markham Renal Center and the primary attending nephrologist rounding on patients at this facility. I am writing to ask that the CON Board approve DaVita HealthCare Partners Inc.'s planned relocation of Markham Renal Center. Specifically, DaVita proposes to relocate its existing dialysis facility approximately 2 miles away to 4215 West 167th Street in order to meet the growing need for dialysis services in the South Suburbs of Chicago.

The existing facility is suboptimal for both patients and staff. The primary entrance to the facility is in the rear alley of the strip mall where large delivery vehicles travel through continuously for adjacent big box businesses. This is particularly troublesome for my patients who are all chronically ill, usually elderly, and many of whom rely on assistive devices, such as canes and walkers to move about. In fact, many of my patients have asked to go to other facilities in the area for this reason. Due to my growing patient population, this is no longer a viable alternative.

Markham Renal Center is currently treating 96 ESRD patients, as of October 31, 2012. The total number of in-center hemodialysis patients my practice has referred by facility and zip code of residence for the most recent three years as reported to The Renal Network is attached hereto at Attachment 1. I also anticipate that approximately 10 patients our group, Kidney Doctors Ltd., is currently treating at DaVita's Hazel Crest Dialysis facility will transfer to the proposed facility for convenience purposes.

Additionally, my practice is treating approximately 489 pre-ESRD patients, 77 of whom reside within 10 minutes of the proposed facility. Based upon attrition due to patient death, transplant, or return of function, I anticipate that my practice will refer 20 of these pre-ESRD patients for in-center hemodialysis within the next 12 to 18 months. A list of these pre-ESRD patients by zip

Michael R. Peck, M.D. • Daniel A. Yohay, M.D. • Kenneth N. Cline, M.D. • Lourdes R. Terrado, M.D.

code is attached hereto as Attachment 2. Thus, approximately 126 patients will receive treatment at Markham Renal Center within the next 12 to 18 months following project completion.

Furthermore, based on increasing demand in the suburban Chicago Planning Area, HSA 7, CON Board staff has determined that there is a need for 51 dialysis stations in the area where this facility operates. This is particularly true given the large African American population which exhibits higher incidence rates of diabetes, hypertension, and ESRD. As a result, I ask that the Board approve this project.

These patient referrals have not been used to support another pending or approved certificate of need application.

The information in this letter is true and correct to the best of my knowledge.

I support the proposed expansion of Markham Renal Center.

Sincerely,

Kenneth Cline M.D.

- b. A list of existing and approved dialysis facilities located within 30 minutes normal travel time of the proposed dialysis facility is provided at Attachment – 26C.

2. Maldistribution of Services

The proposed dialysis facility will not result in a maldistribution of services. A maldistribution exists when an identified area has an excess supply of facilities, stations, and services characterized by such factors as, but not limited to: (1) ratio of stations to population exceeds one and one-half times the State Average; (2) historical utilization for existing facilities and services is below the State Board's utilization standard; or (3) insufficient population to provide the volume or caseload necessary to utilize the services proposed by the project at or above utilization standards. As discussed more fully below, the ratio of stations to population in the geographic service area is 86% of the State average, the average utilization of existing dialysis facilities within the GSA is 83%, and sufficient population exists to achieve target utilization. Accordingly, the proposed dialysis facility will not result in a maldistribution of services.

a. Ratio of Stations to Population

As shown in Table 1110.1430(c)(2)(A), the ratio of stations to population is 86% of the State Average.

Table 1110.1430(c)(2)(A) Ratio of Stations to Population				
	Population	Dialysis Stations	Stations to Population	Standard Met?
Geographic Service Area	2,354,261	621	1:3,791	Yes
State	12,830,632	3,930	1:3,265	

b. Historic Utilization of Existing Facilities

For the last year, the Existing Facility has operated near 63% utilization. Following relocation to a more accessible modern space, Dr. Cline anticipates that he will refer approximately 25 of his large pre-ESRD patient-base to the Replacement Facility. 10 of Dr. Cline's patients receiving treatment at Hazel Crest Dialysis will transfer to the proposed facility, which will allow Hazel Crest to operate at target capacity. As a result, the facility will achieve target utilization within 12 to 18 months. Additionally, the average utilization in the service area is 83%. Accordingly, there is sufficient patient population to justify the need for the Replacement Facility. There will be no maldistribution of services.

c. Sufficient Population to Achieve Target Utilization

The Applicants propose to relocate their existing 24-station facility. The Existing Facility currently treats 96 patients. To achieve the State Board's 80% utilization standard within the first two years after project completion, the Applicants would need 25 patient referrals. As stated in Attachment – 26A, Dr. Cline anticipates referring 25 pre-ESRD patients and 10 ESRD patients from Hazel Crest Dialysis within 12 to 18 months of project completion.

Accordingly, there is sufficient population to achieve target occupancy.

3. Impact to Other Providers

- a. The proposed dialysis facility will not have an adverse impact on existing facilities in the proposed geographic service area. All of the identified patients will either be transfers from the Existing Facility or referrals of pre-ESRD patients. No patients will be transferred from other existing dialysis facilities.
- b. The proposed dialysis facility will not lower the utilization of other area providers that are operating below the occupancy standards.

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(e), Staffing

1. The proposed facility will be staffed in accordance with all State and Medicare staffing requirements.
 - a. Medical Director: Kenneth Cline, M.D. will serve as the Medical Director for the proposed facility. A copy of Dr. Cline's curriculum vitae is attached at Attachment – 26D.
 - b. As discussed throughout this application, the Applicants seek authority to relocate their existing 24-station dialysis facility. The Existing Facility is Medicare certified and fully staffed with a medical director, administrator, registered nurses, patient care technicians, social worker, and registered dietitian. Upon discontinuation of the Existing Facility, all current staff will be transferred to the Replacement Facility.
2. All staff will be trained under the direction of the facility's Governing Body, utilizing DaVita's comprehensive training program. DaVita's training program meets all State and Medicare requirements. The training program includes introduction to the dialysis machine, components of the hemodialysis system, infection control, anticoagulation, patient assessment/data collection, vascular access, kidney failure, documentation, complications of dialysis, laboratory draws, and miscellaneous testing devices used. In addition, it includes in-depth theory on the structure and function of the kidneys; including, homeostasis, renal failure, ARF/CRF, uremia, osteodystrophy and anemia, principles of dialysis; components of hemodialysis system; water treatment; dialyzer reprocessing; hemodialysis treatment; fluid management; nutrition; laboratory; adequacy; pharmacology; patient education, and service excellence. A summary of the training program is attached at Attachment – 26E.
3. As set forth in the letter from James Hilger, Chief Accounting Officer of DaVita and ISD Renal, Inc., attached at Attachment – 26F, the Replacement Facility will maintain an open medical staff.

KENNETH N. CLINE, M.D.
CURRICULUM VITAE

PERSONAL DATA:

Born: October 7, 1963
Chicago, Illinois

Home Address: 2551 Caddy Street
Flossmoor, IL 60422
708-957-7270

EDUCATION:

1985 - 1989 M.D. - University of Illinois College of Medicine
Chicago, Illinois

1981 - 1985 B.A. - Princeton University
Princeton, New Jersey

TRAINING:

7/96 - 6/98 Fellowship - Nephrology
Rush-Presbyterian-St. Luke's Medical Center
Chicago, Illinois

7/92 - 6/93 Chief Resident - Internal Medicine
Rush-Presbyterian-St. Luke's Medical Center
Chicago, Illinois

7/89 - 6/92 Internship/Residency - Internal Medicine
Rush-Presbyterian-St. Luke's Medical Center
Chicago, Illinois

CERTIFICATION:

1992/2002 American Board of Internal Medicine
1998/2011 American Board of Internal Medicine/Nephrology

LICENSURE: State of Illinois #036-082816

PRESENT POSITION:

7/98 - Present Private Practice
Horizon Healthcare Associates, S.C.
19550 S Governors Highway - Suite 2000
Flossmoor, Illinois 60422

PROFESSIONAL EXPERIENCE:

7/01 - Present Medical Director
Markham Dialysis Unit
Diversified Services Inc.

7/93 - 6/96 Attending Physician - Internal Medicine
Cook County Hospital
Chicago, Illinois

7/92 - 6/93 Adjunct Attending - Internal Medicine
Rush-Presbyterian-St. Luke's Medical Center
Chicago, Illinois

CLINICAL TRIALS:

2001 - Present Primary Investigator for Phase III - Phase IV clinical research (open label mid cross over randomized studies): PI for three studies involving phosphate binder therapy; Sub-Investigator for double-blinded, randomized anemia management study.

MEMBERSHIPS: American Society of Nephrology
National Kidney Foundation

AWARDS: National Medical Fellowship, 1985
General Assembly Scholarship Award, 1985
Illinois Department of Public Health (Scholarship) 1986-89

PUBLICATIONS/PRESENTATIONS:

Abstract: C.R. Thomas, Jr., K. Cline, A.A. Budayr, ?A Primary Gastrointestinal Tract Tumor as an Etiology of Humoral Hypercalcemia of Malignancy.: American Gastroenterological Association, 19-22, May, 1991.

Comparison of Morbidity and Mortality between Hemodialysis and Peritoneal Dialysis in an Inner city Population, 1997.

PROGRAM DESCRIPTION

Introduction to Program

The Hemodialysis Education and Training Program is grounded in DaVita's Core Values. These core values include a commitment to providing *service excellence*, promoting *integrity*, practicing a *team* approach, systematically striving for *continuous improvement*, practicing *accountability*, and experiencing *fulfillment* and *fun*.

The Hemodialysis Education and Training Program is designed to provide the new teammate with the necessary theoretical background and clinical skills necessary to function as a competent hemodialysis patient care provider.

DaVita hires both non-experienced and experienced teammates.

A **non-experienced teammate** is defined as:

- A newly hired patient care teammate without prior dialysis experience.
- A rehired patient care teammate who left prior to completing the initial training.

An **experienced teammate** is defined as:

- A newly hired patient care teammate with prior dialysis experience as evidenced by successful completion of a competency exam.
- A rehired patient care teammate who left and can show proof of completing their initial training.

The curriculum of the Hemodialysis Education and Training Program is modeled after the American Nephrology Nurses Association Core Curriculum for Nephrology Nursing and the Board of Nephrology Examiners Nursing and Technology guidelines.

The program incorporates the policies, procedures, and guidelines of DaVita Inc.

The new teammate will be provided with a "StarTracker". The "StarTracker" is a tool that will help guide the training process while tracking progress. The facility administrator and preceptor will review the Star Tracker to plan and organize the training and professional development of the new teammate. The Star Tracker will guide the new teammate through the initial phase of training and then through the remainder of their first year with DaVita, thus increasing their knowledge of all aspects of dialysis. It is designed to be used in conjunction with the "My Learning Plan Workbooks."

Program Description

- The education program for the newly hired patient care provider teammate **without prior dialysis experience** is composed of at least (1) 120 hours didactic instruction and (2) 280 hours clinical practicum, unless otherwise specified by individual state regulations.

The **didactic phase** consists of instruction including but not limited to lectures, readings, self-study materials, on-line learning activities, specifically designed hemodialysis

workbooks for the teammate, demonstrations and observations. This education may be coordinated by the Clinical Services Specialist (CSS), the administrator, or the preceptor. This training includes introduction to the dialysis machine, components of the hemodialysis system, dialysis delivery system, principles of hemodialysis, infection control, anticoagulation, medications, patient assessment/data collection, vascular access, kidney failure, documentation, complications of dialysis, laboratory draws, and miscellaneous testing devices used, introduction to DaVita Policies and Procedures, and introduction to the Amgen Core Curriculum.

The **didactic phase** also includes classroom training with the Clinical Services Specialist, which covers more in-depth theory on structure and functions of the kidneys. This includes ARF/CRF, uremia, osteodystrophy and anemia, principles of dialysis, components of the hemodialysis system, water treatment, dialyzer reprocessing, hemodialysis treatment (which includes machine troubleshooting and patient complications), documentation, complication case studies, heparinization and anticoagulation, vascular access (which includes vascular access workshop), patient assessment (including workshop), fluid management with calculation workshop, nutrition, laboratory, adequacy, pharmacology, patient teaching/adult learning, service excellence (which includes professionalism, ethics and communications), role of the Social Worker and conflict resolution. Additional topics are included as per specific state regulations.

A final comprehensive examination score of $\geq 80\%$ (unless state requires a higher score) must be obtained to successfully complete this portion of the didactic phase. If a score of less than 80% is attained, the teammate will receive additional appropriate remediation and a second exam will be given.

Also included in the **didactic phase** is additional classroom training covering Health and Safety Training, Systems/applications training on LMS, One For All orientation training in the facility or classroom, LMS Compliance training, LMS Diversity training, LMS mandatory water classes, emergency procedures specific to facility, location of disaster supplies, and orientation to the unit.

Included in the **didactic phase** for nurses is additional classroom training. The didactic phase includes:

- The role of the dialysis nurse
- Critical thinking
- Hepatitis review
- Vascular access assessment
- Pharmacology for nurses
- Outcomes management
- CKD MBD
- Anemia
- Adequacy of dialysis

- Lab results
- Village initiatives
- Fluid management
- Developing plan of care
- Survey readiness
- Patient assessment

The **clinical practicum phase** consists of supervised clinical instruction provided by the facility preceptor, a registered nurse, or the clinical services specialist (CSS). During this phase the teammate will demonstrate a progression of skills required to perform the hemodialysis procedures in a safe and effective manner. A *Procedural Skills Inventory Checklist* will be completed to the satisfaction of the preceptor and the administrator. The clinical hemodialysis workbooks will also be utilized for this training and must be completed to the satisfaction of the preceptor and the administrator.

Those teammates who will be responsible for the Water Treatment System within the facility are required to complete the Mandatory LMS Educational Water courses and the corresponding skills checklists.

Both the didactic phase and/or the clinical practicum phase will be successfully completed prior to the new teammate receiving an independent assignment. The new teammate is expected to attend all training sessions and complete all assignments and workbooks.

- The education program for the newly hired patient care provider teammate **with previous dialysis experience** is individually tailored based on the identified learning needs. The initial orientation to the *Health Prevention and Safety Training* will be successfully completed prior to the new teammate working/receiving training in the clinical area. The *Procedural Skills Inventory Checklist* including verification of review of applicable policies and procedures will be completed by the preceptor, a registered nurse, and/or the clinical services specialist (CSS) and the new teammate upon demonstration of an acceptable skill-level. The new teammate will also utilize the hemodialysis training workbook and progress at their own pace. This workbook should be completed within a timely manner as to also demonstrate acceptable skill-level.

The *Initial Competency Exam* will be completed; a score of $\geq 80\%$ or higher is required prior to the new teammate receiving an independent patient-care assignment. If the new teammate receives a score of less than 80%, this teammate will receive theory instruction pertaining to the area of deficiency and a second competency exam will then be given. If the new teammate receives a score of less than 80% on the second exam, this teammate will be evaluated by the administrator, preceptor, and educator to determine if completion of formal training is appropriate.

Following completion of the training, a *Verification of Competency* form will be completed (see forms TR1-06-05, TR1-06-06). In addition to the above, further training and/or certification will be incorporated as applicable by state law.

The goal of the program is for the trainee to successfully meet all training requirements. Failure to meet this goal is cause for dismissal from the training program and subsequent termination by the facility.

Process of Program Evaluation

The Hemodialysis Education Program utilizes various evaluation tools to verify program effectiveness and completeness. Key evaluation tools include the, DaVita Prep Class Evaluation (TR1-06-08), the New Teammate Satisfaction Survey on the LMS and random surveys of facility administrators to determine satisfaction of the training program. To assure continuous improvement within the education program, evaluation data is reviewed for trends, and program content is enhanced when applicable to meet specific needs.

Program Content

The programs content for the new patient care provider teammate without previous dialysis experience incorporates content related to the following areas.

I. DaVita 101/DaVita Way

A. Behavioral objectives

1. State our mission
3. Describe our six core values
4. Describe the DaVita Way
5. List the team members in their local village

B. Content outline

1. DaVita Village and additional services
2. Our mission
3. Our core values
 - a. Service excellence
 - b. Integrity
 - c. Team
 - d. Continuous improvement
 - e. Accountability
 - f. Fulfillment
 - g. Fun
4. DaVita Way of Communication
 - a. Our language
 - b. VillageWeb
 - c. DaVita Village Voice
 - d. Computer systems
5. Teammate resources
6. One For All
 - a. Process review

II. Treatment Modalities

A. Behavioral objectives

1. Name four treatment options for patients with renal failure

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(f), Support Services

Attached at Attachment – 26F is a letter from James Hilger, Chief Accounting Officer of DaVita and ISD Renal, Inc. attesting that the proposed facility will participate in a dialysis data system, will make support services available to patients, and will provide training for self-care dialysis, self-care instruction, home and home-assisted dialysis, and home training.

Re: Certification of Support Services

Dear Chairman Galassie:

I hereby certify under penalty of perjury as provided in § 1-109 of the Illinois Code of Civil Procedure, 735 ILCS 5/1-109 and pursuant to 77 Ill. Admin. Code § 1110.1430(f) that Markham Renal Center will maintain an open medical staff.

I also certify the following with regard to needed support services:

- DaVita utilizes an dialysis electronic data system;
- Markham Renal Center will have available all needed support services consisting of clinical laboratory service, blood bank, nutrition, rehabilitation, psychiatric services, and social services; and
- Patients, either directly or through other area DaVita facilities, will have access to training for self-care dialysis, self-care instruction, and home hemodialysis and peritoneal dialysis.

Sincerely,

James K. Hilger
Chief Accounting Officer
DaVita HealthCare Partners Inc.

Section VII, Service Specific Review Criteria

In-Center Hemodialysis

Criterion 1110.1430(g), Minimum Number of Stations

The proposed dialysis facility will be located in the Chicago-Joliet-Naperville metropolitan statistical area ("MSA"). A dialysis facility located within an MSA must have a minimum of eight dialysis stations. The Applicants propose to establish a 24-station dialysis facility. Accordingly, this criterion is met.

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(h), Continuity of Care

Included at Attachment – 26G is a copy of an agreement from Ingalls Memorial Hospital agreeing to accept the Applicants' ESRD patients for inpatient care and other hospital services when needed.

HOSPITAL BACK UP AGREEMENT

THIS HOSPITAL BACK UP AGREEMENT (the "Agreement") is entered into by and between INGALLS MEMORIAL HOSPITAL ("Hospital") and DSI RENAL, INC. ("DSI") effective as of the Effective Date set forth below.

WHEREAS, Hospital is engaged in the planning and delivery of healthcare services to patients primarily in Cook counties in the State of Illinois;

WHEREAS, DSI owns and operates an outpatient dialysis center located in Markham, IL (the "Facility");

WHEREAS, DSI and Hospital desire to assist nephrologists in the community in the treatment of patients, by facilitating the timely transfer of patients and medical and other information necessary or useful in the care and treatment of patients;

WHEREAS, DSI wishes to cooperate with Hospital to facilitate the timely transfer of patients from the Facility to Hospital; and

WHEREAS, Hospital wishes to be cooperate with DSI to facilitate the timely transfer of patients from the Facility to Hospital.

NOW, THEREFORE, in consideration of the premises herein contained and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties agree as follows:

1. Generally. In accordance with the policies and procedures as hereinafter provided, and upon the recommendation of an attending physician, who is a member of the medical staff of Hospital that such transfer is medically appropriate, a patient of the Facility may be transferred to Hospital.

(a) Any admissions to Hospital must be made by an authorized member of Hospital's medical staff and consistent with all Hospital admission policies.

(b) Hospital agrees to exercise its best efforts to provide for prompt admission of patients provided that all usual conditions of admission are met. DSI shall ensure that transfer record forms shall be completed in detail and signed by the physician or nurse in charge at the applicable Facility and must accompany the patient to the receiving institution.

2. Transfer of Patients. Upon transfer of a patient to Hospital, DSI agrees:

(a) That it shall transfer any needed personal effects of the patient, including money and valuables, and information relating to the same, and shall be responsible therefore until signed for by a representative of Hospital;

(b) That the clinical records of a patient transferred shall contain evidence that the patient was transferred promptly and safely;

(c) Original medical records kept by each of the parties shall remain the property of that institution; and

(d) That transfer procedure shall be made known to the patient care personnel of each of the parties.

3. Medical Records and Information. DSI agrees to transmit with each patient at the time of transfer, or in case of an emergency, as promptly as possible thereafter, an abstract of pertinent medical and other records necessary to continue the patient's treatment without interruption and to provide identifying and other information, to include:

- (a) current medical findings,
- (b) diagnosis,
- (c) rehabilitation potential,
- (d) discharge summary,
- (e) a brief summary of the course of treatment followed,
- (f) nursing and dietary information,
- (g) ambulating status; and
- (h) administrative and pertinent social information.

4. Billing. If a patient of DSI is admitted to Hospital as an inpatient at the time a charge is incurred, Hospital shall have sole responsibility for billing and collecting such charges from the patient and/or third party payors. DSI shall not act as guarantor for any charges incurred while the patient is a patient in Hospital.

5. Transfer Back to the Facility. Hospital agrees to keep the administrator of the Facility advised of the condition of the patients that will affect the anticipated date of transfer back to the Facility and to provide as much notice of the transfer date as possible. DSI agrees to re-admit patients transferred to Hospital for medical care.

6. Control. The Board of Directors of Hospital and the Board of Directors of DSI shall have exclusive control of the policies, management, assets, and affairs of their respective facility.

7. Affiliation. Nothing herein shall be construed as limiting the right of either party to affiliate or contract with any hospital or facility on either a limited or general basis while this Agreement is in effect.

8. Use of Name. Neither party shall use the name of the other in any promotional or advertising material unless review and approval of the intended use shall be obtained from the party whose name is to be used and its legal counsel.

9. **Term and Termination.** This Agreement shall commence as December 16, 2010, shall continue in effect indefinitely, except that either party may terminate this Agreement by giving the other party at least thirty (30) days' notice in writing of its intention to terminate this Agreement. Termination shall be effective at the expiration of the thirty (30) day notice period. However, if either party shall have its license to operate its business revoked by the State of Illinois or become ineligible as a provider of service under Medicare or Medicaid law, this Agreement shall automatically terminate on the date such revocation or ineligibility becomes effective.

10. **Compliance with Law.** Hospital and DSI intend to conduct their relationship at all times in full accordance with federal, state, and local laws and regulations, including, without limitation, the Medicare/Medicaid Anti-Kickback Law (42 U.S.C. §1320a - 7b), the Stark Law (42 U.S.C. §1395nn), and the Medicare conditions of participation for ESRD programs. Notwithstanding anything to the contrary herein contained, in the event that counsel of either party, reasonably acceptable to the other party, determines that performance by such party hereto of any term, covenant, condition, or provision of this Agreement or any of the agreements referred to in the preamble of this Agreement may likely (i) jeopardize the licensure of any party, (ii) jeopardize any participation in (a) Medicare, Medicaid, or other governmental reimbursement or payment programs, or (b) any other state or nationally recognized accrediting organization, or (iii) be in violation of any statute, ordinance, or be otherwise deemed illegal, or be deemed unethical by any recognized body, agency, or association in the medical fields, any party shall have the immediate right to initiate the renegotiation of the affected term or terms of this Agreement, upon notice to the other party, to remedy such condition. The parties shall thereafter use their best efforts to negotiate in good faith to restructure this relationship so as to make the same lawful and to the extent possible, to maintain the economic benefits to each party as contemplated hereunder. Should the parties be unable to renegotiate the term or terms so affected so as to bring it/them into compliance with the statute, rule, regulation, principle or interpretation that rendered it/them unlawful or unenforceable within thirty (30) days of the date on which notice of a desired renegotiation is given, then any party shall be entitled, after the expiration of said initial thirty (30) day period, to terminate this Agreement immediately, without penalty.

11. MISCELLANEOUS

(a) **Notices.** All notices or other communications provided for in this Agreement shall be given to the parties addressed as follows:

if to DSI:

DSI Renal, Inc.
511 Union Street, Suite 1800
Nashville, TN 37219
Phone: 615-234-0951
Fax: 615-234-2424
Attn: General Counsel

if to Hospital:

Ingalls Memorial Hospital
1 Ingalls Drive
Harvey, Illinois 60426
Attn: Administrator

(b) Assignment of Contract. Neither this Agreement nor any of the rights, interests, or obligations hereunder shall be assigned or delegated by either of the parties hereto (whether by operation of law or otherwise) without the prior written consent of the other party; provided, however, either party may assign or delegate all or part of this Agreement to another corporation or entity that is owned or controlled by, owns or controls, or is under common ownership and control with, the assigning entity. In addition, DSI may assign this Agreement to an entity which acquires substantially all of its assets or substantially all of DSP's assets used in the operation of the Facility. Subject to the preceding sentence, this Agreement will be binding upon, inure to the benefit of, and be enforceable by the parties and their respective successors and assigns.

(c) Discrimination. In compliance with federal laws, including the provisions of Title IX of the Education Amendment of 1972, Sections 503 and 504 of the Rehabilitation Act of 1973, and the Americans Disabilities Act of 1990, the parties hereto will not discriminate on the basis of race, sex, color, national or ethnic origin, age, disability, or military service in its administration of its policies, programs, or activities; its admissions policies; other programs; or employment.

(d) Independent Contractor. Each party shall be considered to be an independent party and shall not be construed to be an agent or representative of the other party, and therefore, has no liability for the acts or omissions of the other.

(e) Counterpart Signature. This Agreement may be executed in one or more counterparts (facsimile transmission or otherwise), each of which counterpart shall be deemed an original Agreement and all of which shall constitute but one Agreement.

(f) Headings. The headings used in this Agreement have been prepared for the convenience of reference only and shall not control, affect the meaning, or be taken as an interpretation of any provisions of this Agreement.

(g) Binding Effect. This Agreement shall be binding upon and inure to the benefit of, the parties hereto and their respective successors or assigns.

(h) Governing Law. This Agreement shall be governed in all respects by, and be construed in accordance with, the laws of the State of Illinois.

(i) Force Majeure. The failure by any party to enforce at any time any of the provisions of this Agreement, or any rights with respect thereto, or to exercise any election herein provided, shall in no way be considered to be a waiver of such provisions, rights, or elections, or in any way affect the validity of this Agreement. The exercise by any party of any rights or elections under the terms or covenants of this Agreement shall not preclude or prejudice

any party from exercising the same or any other right it may have under this Agreement, irrespective of any previous action or proceeding taken by the parties.

(j) EMTALA. Both parties will agree to conduct any patient transfers in compliance with the Emergency Medical Treatment and Active Labor Act ("EMTALA") Regulations, 42 U.S.C. 1395dd *et seq.* and any amendments thereto, and such other requirements as may be imposed by the Secretary of Health and Human Services, and any applicable State transfer laws.

(k) Survival Clause. It is mutually agreed any duty, obligation or liability of either party assumed by this Agreement or any subsequent extensions or revisions thereto shall continue until such time as the duty, obligation or liability ceases to exist.

(l) Attorney's Fees. In the event that either party initiates legal action to enforce the provisions of this Agreement, the prevailing party shall be entitled to recover from the defaulting party reasonable attorney's fees and court costs attributable to said action.

(m) Complete Agreement. This Agreement contains all the agreements among the parties with respect to the subject matter and supersedes and replaces all agreements, both oral and written, among the parties hereto with respect to the subject matter hereof. No waiver or amendment of any provision of this Agreement shall be valid unless such waiver is in writing signed by the parties hereto.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement the day and year first above written.

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(i), Relocation of Facilities

The Existing Facility is suboptimal for both patients and staff. As the Applicant does not own the building and the lease term is nearing its end, it has determined that it will be better able to serve the needs of its patients if the service is relocated to a modernized facility. The Existing Facility is located in the 260,000-square-foot Canterbury Shopping Center which was built over 50 years ago in 1961. The Canterbury Shopping Center is a mixed use multi-tenant property with about 40 separate suites on 29 acres. It is the largest and primary retail shopping center for the surrounding area and primarily leases to retail shops like Ashley Stewart, Big Lots, Fairplay Foods, Payday Express, Anna's Linen's, several fast food restaurants and a Greyhound depot. There are no other health care facilities in the building. The dialysis facility does not have access to the front of the mall where the vast majority of parking is located but rather is behind the retail stores abutting to the back alley of the mall with limited parking and semi-truck traffic at the entrance is consistently a hazard for patients and staff. This location was selected by a predecessor operator and it is not consistent with the Applicant's standards for facility operation. Thus, the Applicants must relocate to a modern facility with an improved reception area in order better accommodate its patients' needs and improve access to a broader patient-base.

Section VII, Service Specific Review Criteria
In-Center Hemodialysis
Criterion 1110.1430(j), Assurances

Attached at Attachment – 26H is a letter from James Hilger, Chief Accounting Officer of DaVita and ISD Renal, Inc. certifying that the proposed facility will achieve target utilization by the second year of operation

Re: In-Center Hemodialysis Assurances

Dear Chairman Galassie:

Pursuant to 77 Ill. Admin. Code § 1110.1430(j), I hereby certify the following:

- By the second year after project completion, Markham Renal Center expects to achieve and maintain 80% target utilization; and
- Markham Renal Center also expects hemodialysis outcome measures will be achieved and maintained at the following minimums:
 - $\geq 85\%$ of hemodialysis patient population achieves urea reduction ratio (URR) $\geq 65\%$ and
 - $\geq 85\%$ of hemodialysis patient population achieves Kt/V Daugirdas II .1.2

Sincerely,

James K. Hilger
Chief Accounting Officer
DaVita HealthCare Partners Inc.

Attachment – 26H

Section VIII, Financial Feasibility
Criterion 1120.120 Availability of Funds

The project will be funded entirely with cash and cash equivalents, and a lease from Stenstrom Companies LTD. A copy of DaVita's 2011 10-K Statement evidencing sufficient internal resources to fund the project was previously submitted with the application for Project No. 12-034.

Section IX, Financial Feasibility

Criterion 1120.130 – Financial Viability Waiver

The project will be funded entirely with cash. A copy of DaVita's 2011 10-K Statement evidencing sufficient internal resources to fund the project was previously submitted with the application for Project No. 12-034.

Section X, Economic Feasibility Review Criteria
Criterion 1120.140(a), Reasonableness of Financing Arrangements

Attached at Attachment – 42A is a letter from James Hilger, Chief Accounting Officer of DaVita and ISD Renal, Inc. attesting that the total estimated project costs will be funded entirely with cash.

Attachment – 42A

Section X, Economic Feasibility Review Criteria
Criterion 1120.140(b), Conditions of Debt Financing

This project will be funded in total with cash and cash equivalents. Accordingly, this criterion is not applicable.

Section X, Economic Feasibility Review Criteria
Criterion 1120.310(c), Reasonableness of Project and Related Costs

1. The Cost and Gross Square Feet by Department is provided in the table below.

Table 1120.310(c) COST AND GROSS SQUARE FEET BY DEPARTMENT OR SERVICE									
Department (list below)	A	B	C	D	E	F	G	H	Total Cost (G + H)
	Cost/Square Foot New Mod.		Gross Sq. Ft. New Circ.*		Gross Sq. Ft. Mod. Circ.*		Const. \$ (A x C)	Mod. \$ (B x E)	
ESRD	\$134.00		9,776				\$1,310,000		\$1,310,000
Contingency	\$13.30		9,776				\$130,000		\$130,000
TOTALS	\$147.30		9,776				\$1,440,000		\$1,440,000
* Include the percentage (%) of space for circulation									

2. As shown in Table 1120.310(c) below, the project costs are below the State Standard.

Table 1120.310(c)			
	Proposed Project	State Standard	Above/Below State Standard
New Construction Costs	\$1,310,000	\$259.42 per gross square foot x 9,776 gross square feet = \$2,536,090	Below State Standard
Contingencies	\$130,000	10% of New Construction Costs = 10% x \$1,310,000 = \$131,000	Below State Standard
Architectural/Engineering Fees	\$82,368	6.64 – 9.98% x (Construction Costs + Contingencies) = 6.64 – 9.98% x (\$1,310,000 + \$130,000) = 6.64 – 9.98% x \$1,440,000 = \$95,616 – \$143,712	Below State Standard
Consulting and Other Fees	\$58,000	No State Standard	No State Standard
Moveable Equipment	\$355,299	\$39,945 per station \$39,945 x 24 = \$719,010	Below State Standard

Section X, Economic Feasibility Review Criteria
Criterion 1120.310(d), Projected Operating Costs

Operating Expenses: \$4,070,638

Treatments: 18,876

Operating Expense per Treatment: \$215.65

Section X, Economic Feasibility Review Criteria
Criterion 1120.310(e), Total Effect of Project on Capital Costs

Capital Costs

Depreciation: \$213,720

Amortization: \$7,589

Total Capital Costs: \$221,309

Treatments: 18,876

Capital Costs per Treatment: \$11.72

Section XI, Safety Net Impact Statement

1. This criterion is required for all substantive and discontinuation projects. DaVita HealthCare Partners Inc. and its affiliates are safety net providers of dialysis services to residents of the State of Illinois. DaVita is a leading provider of dialysis services in the United States and is committed to innovation, improving clinical outcomes, compassionate care, education and Kidney Smarting patients, and community outreach. A copy of DaVita's 2011 Community Care report, which details DaVita's commitment to quality, patient centric focus and community outreach, was previously submitted on October 2, 2012 as part of Applicants' application for Proj. No. 12-085. DaVita has taken on many initiatives to improve the lives of patients suffering from CKD and ESRD. These programs include the Kidney Smart, IMPACT, CathAway, and transplant assistance programs. Furthermore, DaVita is an industry leader in the rate of fistula use and had the lowest day-90 catheter rates among large dialysis providers in 2010. Its commitment to improving clinical outcomes directly translated into 7% reduction in hospitalizations among DaVita patients, the monetary result of which was \$1 Billion in savings to the health care system and the American taxpayer in 2011.
2. The proposed project will not impact the ability of other health care providers or health care systems to cross-subsidize safety net services. As shown in Table 1110.1430(b), average utilization at existing dialysis facilities within 30 minutes normal travel time of the Replacement Facility is currently 83%. Dr. Cline has identified 20 CKD patients and 10 ESRD patients from Hazel Crest Dialysis that would likely be referred to the Replacement Facility. He also anticipates all 96 current patients will transfer to the Replacement Facility. Thus, the approximately 126 patients will be referred to the Replacement Facility within 12 to 18 months. This represents an 88% utilization rate, which exceeds the State's 80% standard. As such, the proposed facility is necessary to allow existing facilities to operate at their optimum capacity while at the same time accommodating the growing demand for dialysis services. Accordingly, the proposed dialysis facility will not impact other general health care providers' ability to cross-subsidize safety net services.
3. The proposed project is for the relocation of Markham Renal Center just 2.43 miles from its current location. Patients currently treated at Markham Renal Center will receive treatment at the new facility. As such, the discontinuation of service at the current location will not negatively impact the safety net.

Safety Net Information per PA 96-0031			
CHARITY CARE			
	2009	2010	2011
Charity (# of patients)	66	96	124
Charity (cost in dollars)	\$597,263	\$957,867	\$830,580
MEDICAID			
	2009	2010	2011
Medicaid (# of patients)	445	563	729
Medicaid (revenue)	\$8,820,052	\$10,447,021	\$14,585,645

Section XII, Charity Care Information

The table below provides charity care information for all dialysis facilities located in the State of Illinois that are owned or operated by the Applicants.

CHARITY CARE			
	2009	2010	2011
Net Patient Revenue	\$149,370,292	\$161,884,078	\$219,396,657
Amount of Charity Care (charges)	\$597,263	\$957,867	\$830,580
Cost of Charity Care	\$597,263	\$957,867	\$830,580

Appendix 2 – Discontinuation Impact Letters

Attached as Appendix II is documentation that Letters of Impact of Discontinuation and Relocation were sent to all existing dialysis within 45 minutes normal driving distance, as determined by MapQuest.

Markham Renal Center
3053 West 159th Street
Markham, Illinois 60428

November 14, 2012

FEDERAL EXPRESS

Fresenius Medical Care Hazel Crest
17524 Carriage Way
Hazel Crest, Illinois 60429

To Whom It May Concern:

I am writing on behalf of DaVita Inc. and ISD Renal, Inc. to inform you of the proposed relocation of Markham Renal Center, a 24-station dialysis facility located at 3053 West 159th Street, Markham, Illinois 60428 (the "Existing Facility"). DaVita plans to relocate the Existing Facility to a nearby location. Your facility is within 45 minutes travel time of the Existing Facility.

The estimated date of discontinuation and relocation is approximately June 30, 2014.

Over the past two years, the facility has served between 83 and 101 end-stage renal disease patients at any given time and the census at the end of October 2012 was 96. We expect all existing patients of the Existing Facility will be transferred to the replacement facility.

While we do not anticipate the project will impact access to care for residents of the area or area health care facilities because we will accommodate the Markham Renal Center patient base at another nearby location, the Illinois Health Facilities and Services Review Board requires us to inform you of these plans to provide you an option to provide an impact statement from your facility.

If you choose to provide such a response, please detail whether your facility's admissions policies place any restrictions or limitations on providing service to residents of the market area and your capacity by shift. Please send any such response within fifteen days of receipt of this letter to Tim Tincknell, DaVita Inc., 2611 North Halsted Street, Chicago, Illinois 60614. If we do not receive a response from you within fifteen days, it will be assumed that you agree that the relocation of the Existing Facility will not affect your facility.

If you have any questions about DaVita's plans to relocate the facility, please feel free to contact me at timothy.tincknell@davita.com or 773-549-9412.

Sincerely,

A handwritten signature in black ink, appearing to read 'Tim Tincknell', with a stylized, cursive script.

Tim Tincknell

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number. Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Markham Renal Center
3053 West 159th Street
Markham, Illinois 60428

November 14, 2012

~~FEDERAL EXPRESS~~

HAND DELIVERED

Logan Square Dialysis
2659 North Milwaukee Ave.
Chicago, Illinois 60647

See below for Revd 11/15/12

To Whom It May Concern:

I am writing on behalf of DaVita Inc. and ISD Renal, Inc. to inform you of the proposed relocation of Markham Renal Center, a 24-station dialysis facility located at 3053 West 159th Street, Markham, Illinois 60428 (the "Existing Facility"). DaVita plans to relocate the Existing Facility to a nearby location. Your facility is within 45 minutes travel time of the Existing Facility.

The estimated date of discontinuation and relocation is approximately June 30, 2014.

Over the past two years, the facility has served between 83 and 101 end-stage renal disease patients at any given time and the census at the end of October 2012 was 96. We expect all existing patients of the Existing Facility will be transferred to the replacement facility.

While we do not anticipate the project will impact access to care for residents of the area or area health care facilities because we will accommodate the Markham Renal Center patient base at another nearby location, the Illinois Health Facilities and Services Review Board requires us to inform you of these plans to provide you an option to provide an impact statement from your facility.

If you choose to provide such a response, please detail whether your facility's admissions policies place any restrictions or limitations on providing service to residents of the market area and your capacity by shift. Please send any such response within fifteen days of receipt of this letter to Tim Tincknell, DaVita Inc., 2611 North Halsted Street, Chicago, Illinois 60614. If we do not receive a response from you within fifteen days, it will be assumed that you agree that the relocation of the Existing Facility will not affect your facility.

If you have any questions about DaVita's plans to relocate the facility, please feel free to contact me at timothy.tincknell@davita.com or 773-549-9412.

Sincerely,

A handwritten signature in black ink, appearing to read 'Tim Tincknell', with a stylized, cursive-like script.
